## Chapter I. Polynomials and Chebyshev Spaces

1. Interpolation by Chebyshev Spaces .....	1
1.1. Lagrange Interpolation by Chebyshev Spaces .....	1
1.2. Hermite Interpolation by Extended Chebyshev Spaces.....	4
1.3. Characterization of Extended Complete Chebyshev Spaces .....	7
1.4. Further Properties of Chebyshev Spaces .....	11
1.5. Variation Diminishing Property of Order Complete Chebyshev Spaces.....	15
2. Interpolation by Polynomials and Divided Differences .....	16
2.1. Divided Differences.....	17
2.2. Newton Form of Interpolating Polynomials.....	21
2.3. Nearly Optimal Interpolation Points .....	25
3. Best Uniform Approximation by Chebyshev Spaces.....	29
3.1. Best Approximation in Normed Linear Spaces .....	29
3.2. Characterization of Best Uniform Approximations .....	32
3.3. Global Unicity and Strong Unicity of Best Uniform Approximations.....	36
3.4. Algorithm .....	48
3.5. Approximation Power of Polynomials.....	54
4. Best $L_1$ -Approximation by Chebyshev Spaces.....	56
4.1. Global Unicity of Best $L_1$ -Approximations.....	56
4.2. Interpolation at Canonical Points.....	60
5. Best One-Sided $L_1$ -Approximation by Chebyshev Spaces and Quadrature Formulas .....	65
5.1. Unicity of Best One-Sided $L_1$ -Approximations.....	65
5.2. Gauss Quadrature Formulas for Chebyshev Spaces.....	69
6. Best $L_2$ -Approximation .....	76

## Chapter II. Splines and Weak Chebyshev Spaces

1. Weak Chebyshev Spaces .....	80
1.1. Basic Properties .....	80
1.2. Best Uniform Approximation by Weak Chebyshev Spaces .....	88
1.3. Spline Spaces .....	93
2. B-Splines .....	95
2.1. Basic Properties .....	95
2.2. B-Spline Basis .....	98
2.3. Recurrence Relations .....	99
2.4. Variation Diminishing Property .....	106
3. Interpolation by Splines .....	107
3.1. Lagrange and Hermite Interpolation by Splines .....	107
3.2. Interpolation by Complete Splines, Periodic Splines and Natural Splines .....	115
3.3. Quasi-Interpolation .....	127
4. Best Uniform Approximation by Splines .....	131
4.1. Characterization, Unicity and Strong Unicity of Best Uniform Approximations .....	132
4.2. Algorithm (Fixed Knots) .....	143
4.3. Algorithm (Free Knots) .....	150
4.4. Approximation Power of Splines .....	159
5. Continuity of the Set Valued Metric Projection for Spline Spaces ...	161
5.1. Upper Semicontinuity .....	162
5.2. Lower Semicontinuity .....	163
5.3. Continuous Selections .....	164
6. Best $L_1$ -Approximation by Weak Chebyshev Spaces .....	168
6.1. Unicity of Best $L_1$ -Approximations .....	169
6.2. Interpolation at Canonical Points .....	171
7. Best One-Sided $L_1$ -Approximation by Weak Chebyshev Spaces and Quadrature Formulas .....	174
7.1. Unicity of Best One-Sided $L_1$ -Approximations .....	174
7.2. Gauss Quadrature Formulas for Weak Chebyshev Spaces .....	176
8. Approximation of Linear Functionals and Splines .....	180
9. Spaces of Splines with Multiple Knots .....	187

**Appendix**

- 1. Splines with Free Knots ..... 190
- 2. Splines in Two Variables ..... 195
  - 2.1. Tensor Product and Blending..... 195
  - 2.2. Finite Element Functions..... 200
  - 2.3. Spline Functions ..... 205
- 3. Spline Collocation and Differential Equations ..... 218
- References ..... 223
- Index ..... 240
