

CONTENTS

Preface	vii
Notations, Definitions	1
I. Lagrange Interpolation	
1. Introduction	5
2. A general approach to obtain lower estimations	7
3. Fine and rough theory in Lagrange interpolation	17
4. Some further general theorems	30
5. Problems and remarks	34
II. Some Convergent Interpolatory Processes	
1. The Erdős conditions	37
2. Convergence for an arbitrary system of nodes	52
3. Equidistant nodes	53
4. The Somorjai theorem	54
5. Interpolatory proofs of Timan and Gopengauz-Telyakowskii theorems	60
6. Problems and remarks	69
III. The Lebesgue Function and Lebesgue Function-Type Sums	
1. Introduction	71
2. Lower estimates for the Lebesgue function and sums of Lebesgue-function type	72

3.	The corresponding results for complex and trigonometric cases	88
4.	Conjectures of Bernstein and Erdős on the optimal Lebesgue constants	94
5.	The values of Λ_n^* , $\hat{\Lambda}_n^*$ and $\bar{\Lambda}_n^*$	107
6.	Problems and results	121
IV.	Divergence of Lagrange Interpolation	
1.	Introduction. Classical results	125
2.	Recent results	126
3.	Almost everywhere divergence for arbitrary system of nodes	127
4.	Almost everywhere divergence in complex and trigonometric cases	145
5.	Divergence of Lagrange interpolation on a set of second category	150
6.	Problems and remarks	161
V.	Hermite-Fejér and Hermite-Fejér Type Interpolations	
1.	Introduction and classical results	165
2.	Error estimations	168
3.	Necessary and sufficient conditions for the convergence of $\{H_n^{(\alpha, \beta)}\}$ when $\max(\alpha, \beta) \geq 0$. Hermite-Fejér type interpolations	172
4.	Problems and results	199
VI.	Comparison of Lagrange and Hermite-Fejér Interpolations	
1.	Introduction. Two divergence-results	201
2.	Generalizations of a previous result	207
3.	Fine and rough theory for Hermite-Fejér interpolation	216
4.	Proving convergence for Lagrange interpolation via Hermite-Fejér interpolation	223
5.	Problems and remarks	226
VII.	Some Problems in the Theory of Lacunary Interpolation	
1.	Introduction	227

2. $(0, 2)$ interpolation on Jacobi nodes	228
3. $(0, 2)$ interpolation on Laguerre nodes	234
4. $(0, m)$ trigonometric interpolation on equidistant nodes	239
5. Hermite-Fejér interpolation revisited	261
6. Problems and remarks	263
VIII. Miscellaneous Problems	
1. Derivatives of projection operators	265
2. Müntz-Jackson type theorems via interpolation	272
3. An extremal problem for the fundamental functions of interpolation	276
4. Problems and remarks	279
IX. Appendix: Some Frequently Used Relations and Theorems	
1. Jacobi polynomials	281
2. Estimates for derivatives of polynomials	284
3. Uniform and pointwise approximation theorems	285
References	289
Index	303
