

CONTENTS

Introduction	
JOHN FOX J. SCOTT LONG	7
1. Graphical Perception	
IAN SPENCE STEPHAN LEWANDOWSKY	13
2. Describing Univariate Distributions	
JOHN FOX	58
3. A Survey of Smoothing Techniques	
COLIN GOODALL	126
4. Finding Transformations for Regression Using the ACE Algorithm	
RICHARD D. DE VEAUX	177
5. Geometry of Multiple Regression and Interactive 3-D Graphics	
GEORGES MONETTE	209
6. Regression Diagnostics: An Expository Treatment of Outliers and Influential Cases	
KENNETH A. BOLLEN ROBERT W. JACKMAN	257
7. A Primer on Robust Regression	
RICHARD A. BERK	292

8. An Introduction to Bootstrap Methods: Examples and Ideas	
ROBERT STINE	325
9. The Analysis of Social Science Data with Missing Values	
RODERICK J. A. LITTLE DONALD B. RUBIN	374
10. Selection Bias in Linear Regression, Logit and Probit Models	
JEFFREY A. DUBIN DOUGLAS RIVERS	410
