

# Contents

|   |           |
|---|-----------|
| <b>Preface</b>  | <b>8</b>  |
| <b>Acknowledgments</b>  | <b>11</b> |
| <b>1. The Analysis of Social Change</b>   | <b>13</b> |
| 1.1 Availability of Social Change Data  | 13        |
| 1.2 The Nature of Social Change Data  | 14        |
| 1.3 Research Designs for Establishing Social Change   | 17        |
| <b>2. Log-Linear Analysis of Categorical Data</b>   | <b>23</b> |
| 2.1 Introduction  | 23        |
| 2.2 Basic Concepts and Notation   | 26        |
| 2.3 The Saturated Frequency Model   | 33        |
| 2.4 Unsaturated Frequency Models  | 46        |
| 2.5 Testing and Fitting Unsaturated Models  | 56        |
| 2.6 The Collapsibility Theorem  | 68        |
| 2.7 The Effect Model  | 70        |
| 2.7.1 The Modified Multiple Regression Approach:<br>Effect Models with a Dichotomous Dependent Variable | 71        |
| 2.7.2 The Modified Multiple Regression Approach:<br>Effect Models with a Polytomous Dependent Variable  | 75        |
| 2.7.3 The Modified Path Analysis Approach   | 77        |
| 2.8 Ordinal Categorical Variables   | 82        |
| 2.9 Some Problems: Small Sample Size and<br>Polytomous Variables  | 87        |
| <b>3. Latent Class Analysis and Log-Linear Models with<br/>    Latent Variables</b>                     | <b>93</b> |
| 3.1 Introduction  | 93        |
| 3.2 Latent Class Analysis: Log-Linear Models with<br>One Latent Variable                                | 95        |
| 3.2.1 The Basic Model   | 95        |
| 3.2.2 Obtaining the Maximum Likelihood Estimates:<br>The EM- Algorithm                                  | 103       |

|           |  |            |
|-----------|--|------------|
| 3.2.3     | Restricted Models  | 108        |
| 3.2.4     | Identifiability: Testing and Fitting   | 111        |
| 3.3       | Association between Latent and External Variables:<br>Latent Class Scores and Quasi-Latent Variables                     | 113        |
| 3.4       | Models with Two or More Latent Variables   | 119        |
| 3.4.1     | Saturated Models for Latent Variables  | 119        |
| 3.4.2     | Unsaturated and Modified Path Analysis Models for<br>Latent Variables: A Modified LISREL Approach                        | 123        |
| 3.5       | Local Dependence Models: Direct Effects between Indicators   | 126        |
| 3.6       | Simultaneous Analyses in Several Groups  | 127        |
| 3.7       | Causal Models with Latent Variables  | 135        |
| 3.8       | Ordinal Latent Variables   | 143        |
| <b>4.</b> | <b>Panel Analysis: Answering Typical Panel Questions</b>   | <b>147</b> |
| 4.1       | Introduction   | 147        |
| 4.2       | Changes in One Characteristic: Log-Linear Analysis<br>of a Turnover Table  | 148        |
| 4.2.1     | Introduction   | 148        |
| 4.2.2     | (Quasi-)Independence   | 152        |
| 4.2.3     | (Quasi-)Symmetry and Marginal Homogeneity  | 156        |
| 4.2.4     | A Turnover Table with Ordered Categories   | 162        |
| 4.2.5     | "Difference" Scores  | 164        |
| 4.3       | Analyzing Tables with More Than Two Variables  | 165        |
| 4.3.1     | Comparing Changes in Different Subgroups   | 166        |
| 4.3.2     | Comparing Changes in Related Characteristics   | 169        |
| 4.3.3     | Testing Changes in Association   | 176        |
| 4.3.4     | Comparing Changes in Different Periods   | 180        |
| 4.4       | Latent Variable Models   | 181        |
| 4.4.1     | Introduction: Change and Unreliability   | 181        |
| 4.4.2     | Analyzing a Turnover Table by Means of<br>Latent Variable Models   | 183        |
| 4.4.3     | Analyzing Tables with More Than Two Manifest Variables<br>by Means of Latent Variable Models:<br>Latent (Quasi-)Symmetry | 193        |
| <b>5.</b> | <b>Panel Analysis: Investigating Causal Hypotheses</b>   | <b>203</b> |
| 5.1       | Introduction: The Panel Design as<br>a Quasi-Experimental Design   | 203        |
| 5.2       | The One-Group Pretest-Posttest Design  | 203        |
| 5.3       | The Nonequivalent Control Group Design   | 215        |
| 5.4       | Modified Path Models   | 233        |
| 5.5       | Typical Panel Problems   | 248        |
| 5.5.1     | Nonresponse  | 249        |

|   |            |
|---|------------|
| 5.5.2 Test-Retest Effects and Correlated Errors:<br>Local Dependence Latent Class Models        | 263        |
| <b>6. Trend Analysis</b>  | <b>271</b> |
| 6.1 Introduction  | 271        |
| 6.2 The Trend Design  | 272        |
| 6.3 Net Changes in One Characteristic   | 274        |
| 6.3.1 Time as an Independent Variable   | 274        |
| 6.3.2 Net Changes in Subgroups:<br>Introduction of Additional Variables                         | 285        |
| 6.4 Net Changes in More Than One Characteristic   | 289        |
| 6.5 Interrupted Time-Series Design  | 300        |
| 6.6 Models with Latent Variables  | 306        |
| <b>7. Cohort Analysis</b>   | <b>314</b> |
| 7.1 Introduction  | 314        |
| 7.2 Clarifying the Key Concepts Age, Period, and Cohort   | 317        |
| 7.3 Alternative Designs   | 320        |
| 7.4 The Identification Problem  | 326        |
| 7.5 Log-Linear Analysis of a Cohort Table   | 332        |
| 7.5.1 Introduction: Obtaining the Data and Clarifying<br>the Meaning of Age, Period, and Cohort | 332        |
| 7.5.2 The Age $\times$ Period Design  | 337        |
| 7.5.3 The Age $\times$ Cohort Design  | 340        |
| 7.5.4 The Period $\times$ Cohort Design   | 343        |
| 7.5.5 The Three-Factor Design: Age $\times$ Period $\times$ Cohort                              | 345        |
| 7.6 Extending the Cohort Table  | 354        |
| 7.6.1 Introducing Additional Variables  | 354        |
| 7.6.2 An Example: Introducing Gender  | 355        |
| <b>8. A Summary View</b>  | <b>360</b> |
