Chapter 1	
HISTORY OF AIR POLLUTION CONTROL IN JAPAN by Michio Hashimoto	
1.1 Introduction	1
1.2 The Prewar Period	2
1.3 Local Initiatives in the Postwar Period	8
1.4 The Role of the Central Bureaucracy in Regional Industrial Development and the Smoke and Soot Regulation Law of 1962	14
1.5 The 1967 Basic Law, the 1968 Air Pollution Control Law, and the AAQS for SO ₂	17
1.6 1970-74: The Pace of Change Quickens	26
1.7 The Pollution Trials	30
1.8 Pollution Management and Total Mass Emission Regulation	32
1.9 Automobile Exhaust Control, 1965-83	34
1.10 Truck and Bus Exhaust Control	43
1.11 AAQS for NO ₂ and the NO _x Control Plan	48
1.12 Air Pollution Control and Energy	63
1.13 Specific Air Pollutants	70
1.14 Evolution of Air Quality Management	72
1.15 International Perspectives in Japanese Pollution Control	79
1.16 How Japan Conquered Air Pollution: A Historical Summary	83
1.17 Conclusion	87
REFERENCES	90
Chapter 2	
HEALTH EFFECTS OF AIR POLLUTION by Hitoshi Kasuga	
2.1 Basis of Epidemiological Study	95
2.1.1 Measurement of Exposure	95
2.1.2 Air Pollution Indices	95
2.1.3 Health Effects Markers Related to Air Pollution	96
2.1.4 Study Populations	97
2.1.5 Designs of Studies and Their Application	97

2.2	Air Pollution and Its Health Effects in Japan for the Two Postwar Decades	98
2.3	Tokyo-Yokohama Asthma	99
2.4	Yokkaichi Asthma	100
2.5	Relationship between Asthma and Air Pollution	102
2.6	Compound Air Pollution	104
2.7	Health Effect of NO ₂	106
2.7.1	NO ₂ Air Pollution	107
2.7.2	Indoor NO ₂ Air Pollution	108
2.7.3	Roadside NO ₂ Air Pollution	109
2.8	Other Types of Air Pollution	110
2.8.1	Roadside Air Pollution Produced by Studded Tires	110
2.8.2	Air Pollution and Lung Cancer	110
2.8.3	Air Pollution and Excess Deaths	111
2.8.4	Air Pollution and Volcanic Ash	111
	REFERENCES	111

Chapter 3

EMISSION CONTROL TECHNOLOGY by Hajime Nishimura and Masayoshi Sadakata

3.1	Automobile Emission Control	115
3.1.1	How It Became Possible -- socio-technological analysis --	115
3.1.2	Present State of Technology	122
3.2	NO _x Emission Control from Stationary Sources	125
3.2.1	Combustion Modification Methods for NO _x Reduction	126
3.2.2	NO _x Removal Methods	137
3.2.3	Choosing the NO _x Control Technology and the Cost for Individual Facilities	141
3.3	SO _x Emission Control from Stationary Sources	146
3.3.1	Sources of SO _x	147
3.3.2	Formation and Behavior of SO _x in the Combustion Furnace	148
3.3.3	SO _x Control Technology	150
3.3.4	The Cost of Desulfurization Processes	153
	REFERENCES	155

Chapter 4

MONITORING AND SIMULATION by Yukio Yanagisawa

4.1	Continuous Monitoring	157
4.1.1	Sulfur Dioxide	157
4.1.2	Nitrogen Oxides	158
4.1.3	Carbon Monoxide	159
4.1.4	Photochemical Oxidising Agent (Ozone)	160

4.1.5	Suspended Particulate Matter	161
4.1.6	Non-methane Hydrocarbons	162
4.2	Passive Monitoring	163
4.2.1	Theoretical Analysis of the Passive Monitor	164
4.2.2	Lead Peroxide Candle Method	166
4.2.3	Filter Badge and Palmes Tube	169
4.3	Atmospheric Models	170
4.3.1	Dispersion Model	171
4.3.2	Parameters of the Dispersion Model	172
4.4	Estimation of Emission	179
4.4.1	Stationary Sources	179
4.4.2	Mobile Sources	183
4.5	Example of Computer Simulation	186
4.5.1	Subject of Simulation	186
4.5.2	Input Data	187
4.5.3	Calculations	189
4.5.4	Prediction of Future NO ₂ Concentrations	192
	REFERENCES	196

Chapter 5

SYSTEM FOR REGULATION by Saburo Kato

5.1	Basic Framework for Air Pollution Control	197
5.1.1	The Unique Role of Ambient Air Quality Standards	197
5.1.2	Emission Controls for Stationary Sources	199
5.1.3	Emission Controls for Motor Vehicle Exhaust	200
5.1.4	Monitoring of Air Pollution	201
5.1.5	The Establishment of the Environment Agency	204
5.1.6	R & D in the Field of Pollution Control	206
5.2	Regulation of SO _x	207
5.2.1	K-value Regulation	207
5.2.2	Regulation of the Sulfur Content of Fuel Oil	212
5.2.3	Total Mass Emission Control of SO _x	213
5.3	Regulation of NO _x	216
5.3.1	Emission Standards for Nitrogen Oxides	218
5.3.2	Total Mass Emission Control of NO _x	218
5.3.3	Regulation of Motor Vehicles	220
5.4	Regulations of Particulates, Hydrocarbons, and Other Toxic Substances	222
5.4.1	Soot and Dust and Other Particulates	222
5.4.2	Countermeasures against Photochemical Air Pollution and Regulations of Hydrocarbons	224
5.4.3	Emission Standards for Toxic Substances	227
5.4.4	Regulation of Carbon Monoxide	228

5.5 Unique Efforts by Local Governments and Industry	229
5.5.1 Legislation by Local Governments	229
5.5.2 Concluding Pollution Control Agreements with Industry	232
5.5.3 Efforts Made by Industries	235
GENERAL REFERENCES	238
Chapter 6	
THE POLLUTION-RELATED HEALTH DAMAGE COMPENSATION LAW by Michio Hashimoto	
6.1 Introduction	239
6.2 The Four Pollution Cases	240
6.2.1 Minamata Disease in Kumamoto Prefecture	240
6.2.2 Minamata Disease in Niigata Prefecture	244
6.2.3 Itai-itai Disease in Toyama Prefecture	247
6.2.4 Air Pollution in Yokkaichi	249
6.3 Litigation	252
6.4 Legislation	257
6.4.1 The 1967 Basic Law for Environmental Pollution Control Measures	257
6.4.2 The 1969 Special Relief Law for Pollution-Related Health Hazards	259
6.4.3 Strict Liability Legislation of 1972	260
6.4.4 Shift in Pollution Policy: 1965-1972	261
6.5 The Pollution-Related Health Damage Compensation Law	262
6.5.1 The Recommendations of the Central Advisory Council on Environmental Pollution Control Measures	262
6.5.2 The Administrative System	266
6.6 Performance and Problems	281
6.6.1 Trends in Class I Areas	281
6.6.2 Trends in Class II Areas	287
6.6.3 Leap of Faith: Science vs. Administrative Expediency	289
6.6.4 The Future of Area Designation	291
6.6.5 The Availability of Judicial Relief	292
6.6.6 The Amount of Benefits	293
6.6.7 The Problems of Physicians	294
6.6.8 The 80:20 Ratio	294
6.6.9 The High Collection Rate	295
6.7 Conclusion	295
REFERENCES	296
Subject Index	299
