

CONTENTS

Series Editor's Introduction	5
1. Introduction	7
Some Sample Results	7
Some Background Comments	13
The Central Unifying Theme of the Monograph	16
2. The Basic Structure of a Data Matrix	17
Basic Structure of a Matrix	17
Transformations	23
3. Principal Components Analysis	26
Single Factor Example	27
Multifactor Example	31
4. Multidimensional Preference Scaling	44
5. Correspondence Analysis of Contingency Tables	55
The Mechanics of Correspondence Analysis	59
The Reconstruction of Expected and Observed Data	62
Another Perspective:	
The Case Approach with Indicator Variables	66
6. Correspondence Analysis of Nonfrequency Data	70
Correspondence Analysis of Rank-Order Data	72
Correspondence Analysis of Proximities	75
7. Ordination, Seriation, and Guttman Scaling	76
The Horseshoe Effect	78
Guttman Scaling as a Special Case of	
Correspondence Analysis	79
An Invariance Property of	
Multiple-Way Indicator Matrices	83

8. Multiple Correspondence Analysis	85
Multiple Comparisons Using “Stacked” Matrices	86
A Few Final Words	90
Appendix	91
Software for Metric Scaling	91
References	92
About the Authors	96
