

2.3	Positive Definite Matrices	48
2.4	A Square-Root Matrix	52
2.5	Random Vectors and Matrices	53
2.6	Mean Vectors and Covariance Matrices	54
2.7	Matrix Inequalities and Maximization	65
	Supplement 2A Vectors and Matrices: Basic Concepts	69
	Exercises	86 / References 91

3 Sample Geometry and Random Sampling 92

3.1	Introduction	92
3.2	The Geometry of the Sample	93
3.3	Random Samples and the Expected Values of the Sample Mean and Covariance Matrix	100
3.4	Generalized Variance	104
3.5	Sample Mean, Covariance, and Correlation as Matrix Operations	114
3.6	Sample Values of Linear Combinations of Variables	117
3.7	Treating an Observed Sample as a Population	121
	Exercises	122 / References 125

4 The Multivariate Normal Distribution 126

4.1	Introduction	126
4.2	The Multivariate Normal Density and Its Properties	127
4.3	Sampling from a Multivariate Normal Distribution and Maximum Likelihood Estimation	143
4.4	The Sampling Distribution of \bar{X} and S	149
4.5	Large-Sample Behavior of \bar{X} and S	150
4.6	Assessing the Assumption of Normality	152
4.7	Transformations to Near Normality	164
	Exercises	171 / References 176

PART II INFERENCES ABOUT MULTIVARIATE MEANS AND LINEAR MODELS

5 Inferences about a Mean Vector 178

- 5.1 Introduction 178
 - 5.2 The Plausibility of μ_0 as a Value for a Normal Population Mean 178
 - 5.3 Hotelling's T^2 and Likelihood Ratio Tests 184
 - 5.4 Confidence Regions and Simultaneous Comparisons of Component Means 188
 - 5.5 Large-Sample Inferences about a Population Mean Vector 199
 - 5.6 Inferences about Mean Vectors When Some Observations Are Missing 202
- Supplement 5A Simultaneous Confidence Intervals and Ellipses as Shadows of the p -Dimensional Ellipsoids 208
- Exercises 210 / References 217

6 Comparisons of Several Multivariate Means 219

- 6.1 Introduction 219
 - 6.2 Paired Comparisons and a Repeated Measures Design 220
 - 6.3 Comparing Mean Vectors from Two Populations 230
 - 6.4 Comparison of Several Multivariate Population Means (One-Way MANOVA) 241
 - 6.5 Simultaneous Confidence Intervals for Treatment Effects 253
 - 6.6 Profile Analysis 255
 - 6.7 Two-Way Multivariate Analysis of Variance 260
- Exercises 271 / References 284

7 Multivariate Linear Regression Models 285

- 7.1 Introduction 285
- 7.2 The Classical Linear Regression Model 286
- 7.3 Least Squares Estimation 289

7.4	Inferences about the Regression Model	296
7.5	Inferences from the Estimated Regression Function	305
7.6	Model Checking and Other Aspects of Regression	308
7.7	Multivariate Multiple Regression	314
7.8	The Concept of Linear Regression	328
7.9	Comparing the Two Formulations of the Regression Model	338
7.10	Path Analysis—An Analysis of Causal Relations	340
	Supplement 7A The Distribution of the Likelihood Ratio for the Multivariate Multiple Regression Model	348
	Exercises	349 / References 355

PART III ANALYSIS OF COVARIANCE STRUCTURE

8 *Principal Components* 356

8.1	Introduction	356
8.2	Population Principal Components	357
8.3	Summarizing Sample Variation by Principal Components	367
8.4	Graphing the Principal Components	378
8.5	Large-Sample Inferences	380
	Supplement 8A The Geometry of the Sample Principal Component Approximation	384
	Exercises	388 / References 394

9 *Factor Analysis and Inference for Structured Covariance Matrices* 396

9.1	Introduction	396
9.2	The Orthogonal Factor Model	397
9.3	Methods of Estimation	403
9.4	Factor Rotation	419
9.5	Factor Scores	429
9.6	Perspectives and a Strategy for Factor Analysis	435

✓12.5	Multidimensional Scaling	602	
✓12.6	Data Displays and Pictorial Representations		609
	Exercises	620 /	References 627

Appendix 628

Table 1	Standard Normal Probabilities	629	
Table 2	Student's <i>t</i> -Distribution Critical Points		630
Table 3	χ^2 Critical Points	631	
Table 4	<i>F</i> -Distribution Critical Points ($\alpha = .10$)		632
Table 5	<i>F</i> -Distribution Critical Points ($\alpha = .05$)		634
Table 6	<i>F</i> -Distribution Critical Points ($\alpha = .01$)		636

Data Index 638

Subject Index 639

9.7	Structural Equation Models	443
	Supplement 9A Some Computational Details for Maximum Likelihood Estimation	448
	Exercises	451 / References 458

✓ 10 **Canonical Correlation Analysis** 459

10.1	Introduction	459
10.2	Canonical Variates and Canonical Correlations	460
10.3	Interpreting the Population Canonical Variables	466
10.4	The Sample Canonical Variates and Sample Canonical Correlations	471
10.5	Additional Sample Descriptive Measures	479
10.6	Large-Sample Inferences	483
	Exercises	487 / References 491

PART IV CLASSIFICATION AND GROUPING TECHNIQUES

✓ 11 **Discrimination and Classification** 493

11.1	Introduction	493
11.2	Separation and Classification for Two Populations	494
11.3	Classification with Two Multivariate Normal Populations	503
11.4	Evaluating Classification Functions	511
11.5	Fisher's Discriminant Function—Separation of Populations	522
11.6	Classification with Several Populations	525
11.7	Fisher's Method for Discriminating among Several Populations	540
11.8	Final Comments	552
	Exercises	556 / References 571

12 **Clustering** 573

12.1	Introduction	573
12.2	Similarity Measures	575
12.3	Hierarchical Clustering Methods	584
12.4	Nonhierarchical Clustering Methods	596
