

Contents

Chapter 1 Reaction Diffusion Equations

1.1 Derivation of Reaction Diffusion Equations	1
1.2 Boundary Conditions	4
1.3 Derivation of Some Specific Models	7
1.4 Linear Reaction Diffusion Equations	14
1.5 Monotone Method for Time-Dependent Problems	20
1.6 Nonuniqueness of Time-Dependent Solutions	26
1.7 Monotone Method for Steady-State Problems	31
1.8 Applications to Specific Models	36
1.9 Notes and Comments	45

Chapter 2 Parabolic Boundary-Value Problems

2.1 A Review of the Linear Parabolic Problem	47
2.2 A Positivity Lemma	54
2.3 Upper and Lower Sequences	56
2.4 Existence-Comparison Theorems	62
2.5 Positivity and Boundedness of Solutions	65
2.6 Integroparabolic Equations of Volterra Type	69
2.7 Integroparabolic Equations of Fredholm Type	80
2.8 Parabolic Boundary-Value Problems with Time Delay	86
2.9 Notes and Comments	92

Chapter 3 Elliptic Boundary-Value Problems

3.1 The Linear Boundary-Value Problem	93
3.2 The Method of Upper and Lower Solutions	98
3.3 The Uniqueness Problem	104
3.4 Positive Steady-State Solutions	108
3.5 The Spectrum Problem	112
3.6 Multiple Steady-State Solutions	117
3.7 Integroelliptic Boundary-Value Problems	125

3.8 Applications	133
3.9 Notes and Comments	138

Chapter 4 Equations with Nonlinear Boundary Conditions

4.1 Parabolic Boundary-Value Problems	139
4.2 An Application to the Linear Problem	145
4.3 Boundary Conditions of Integral Type	149
4.4 Elliptic Boundary-Value Problems	154
4.5 Existence Theorems for Hölder-Continuous Functions	161
4.6 Uniqueness of Positive Solution	168
4.7 Spectrum for Problems with Nonlinear Boundary Conditions	171
4.8 Applications	175
4.9 Notes and Comments	180

Chapter 5 Stability Analysis

5.1 Lyapunov Stability	183
5.2 Stability of Uniform Steady-State Solutions	188
5.3 Stability of Nonuniform Steady-State Solutions	192
5.4 Monotone Convergence of Time-Dependent Solutions	198
5.5 Stability of Maximal and Minimal Solutions	202
5.6 Problems with Nonlinear Boundary Conditions	206
5.7 Application to Models with Nonlinear Reaction Functions ..	214
5.8 Application to Models with Nonlinear Boundary Conditions	219
5.9 Notes and Comments	226

Chapter 6 Blowing-Up Behavior of Solutions

6.1 Growth Property of Solutions	229
6.2 Blowing-Up Property of the Solution	234
6.3 Estimate of the Finite Blowing-Up Time	240
6.4 The Blowing-Up Point of the Solution	243
6.5 Nonlinear Boundary Functions	249

6.6	The Method of Concavity	257
6.7	The Quenching Problem	267
6.8	Thermal Explosion Problems in Combustion Theory	277
6.9	Applications to Reactor Dynamics and Nonlinear Polarization	284
6.10	Notes and Comments	287
 Chapter 7 Parabolic and Elliptic Equations in Unbounded Domains		
7.1	The Linear Parabolic and Elliptic Equations	290
7.2	The Cauchy Problem in \mathbb{R}^n	296
7.3	A Half-Space Problem	302
7.4	Parabolic Problem in General Unbounded Domains	312
7.5	Elliptic Equations in \mathbb{R}^n	319
7.6	Radially Symmetric Solutions	325
7.7	A Model Problem from Geometry and Applied Physics	334
7.8	Elliptic Equations in Exterior Domains	340
7.9	Elliptic Equations in General Unbounded Domains	345
7.10	Exterior Problem with Nonlinear Boundary Conditions ...	354
7.11	Stability and Asymptotic Behavior of Solutions	361
7.12	Blowing-Up Behavior of the Solution in \mathbb{R}^n	371
7.13	Notes and Comments	379
 Chapter 8 Coupled Systems of Reaction Diffusion Equations		
8.1	Quasimonotone Reaction Functions	381
8.2	Monotone Sequences for Coupled Parabolic Equations	384
8.3	Existence-Comparison Theorems for Coupled Parabolic System	392
8.4	Existence-Comparison Theorems for Coupled Elliptic System	401
8.5	Elliptic Systems with Mixed Quasimonotone Functions	408
8.6	Uniqueness of Steady-State Solution	413
8.7	Positive Invariant Rectangles	417

8.8	Finite Parabolic Systems with Quasimonotone Functions ...	424
8.9	Finite Parabolic Systems with Nonquasimonotone Functions	431
8.10	Finite Elliptic Systems	438
8.11	Finite Parabolic-Ordinary Systems	445
8.12	Finite Integroparabolic and Integroelliptic Systems	449
8.13	Notes and Comments	458

Chapter 9 Systems with Nonlinear Boundary Conditions

9.1	Quasimonotone Boundary Functions	459
9.2	Construction of Monotone Sequences	462
9.3	Existence-Comparison Theorems for Parabolic System	468
9.4	Elliptic Systems with Coupled Boundary Conditions	471
9.5	Positive Solution for Coupled Systems	479
9.6	Global Existence Theorems for Bounded Reaction Functions	485
9.7	Finite Parabolic Systems with Coupled Boundary Conditions	491
9.8	Finite Elliptic Systems with Coupled Boundary Conditions .	498
9.9	Finite Systems with Nonlocal Boundary Conditions	503
9.10	Notes and Comments	509

Chapter 10 Stability and Asymptotic Behavior of Solutions

10.1	Stability of the Zero Solution	511
10.2	Stability of Nontrivial Steady-State Solutions	516
10.3	Instability of Steady-State Solutions	522
10.4	Monotone Convergence of Time-Dependent Solutions	529
10.5	Asymptotic Stability in a Sector	536
10.6	Spatially Homogeneous Upper and Lower Solutions	542
10.7	Stability of Solutions for Nonautonomous Systems	546
10.8	Systems with Nonlinear Boundary Conditions	555
10.9	Finite Coupled Systems with Quasimonotone Nondecreasing Functions	563
10.10	Notes and Comments	568

Chapter 11 Asymptotic Limit and Blowing-Up Behavior of Solutions

11.1 Nonisolated Steady-State Solutions 570
 11.2 Asymptotic Limit of Time-Dependent Solutions 573
 11.3 Coupled Parabolic and Ordinary Equations 581
 11.4 A Special Model 588
 11.5 Blowing-Up of Solution for Neumann Boundary Problems . 593
 11.6 Blowing-Up of Solution for Robin Boundary Problems 598
 11.7 Blowing-Up of Solution for Dirichlet Boundary Problems . 604
 11.8 Nonquasimonotone Functions 609
 11.9 Coupled Nonlinear Boundary Conditions 613
 11.10 Notes and Comments 619

Chapter 12 Applications of Coupled Systems to Model Problems

12.1 A Gas-Liquid Interaction Problem 622
 12.2 The Belousov-Zhabotinskii Reaction Diffusion System 628
 12.3 Enzyme-Substrate Reaction Diffusion Problems 641
 12.4 The Volterra-Lotka Competition Model in Ecology 654
 12.5 Some Prey-Predator Models in Ecology 666
 12.6 A Cooperating Model in Ecology 674
 12.7 The FitzHugh-Nagumo Equations in Neurophysiology 681
 12.8 Heat-Mass Transfer in Chemical Reactors and
 Combustion Theory 687
 12.9 Epidemic Problems with Diffusion 695
 12.10 Coupled Systems in Nuclear Reactor Dynamics 713
 12.11 Neutron Transport Problems with Temperature Feedback 723
 12.12 Notes and Comments 744
