

# Contents

<b>Preface</b>	<b>ix</b>
<b>I Basic concepts</b>	<b>1</b>
<b>1 Regular sequences and depth</b>	<b>3</b>
1.1 Regular sequences . . . . .	3
1.2 Grade and depth . . . . .	8
1.3 Depth and projective dimension . . . . .	16
1.4 Some linear algebra . . . . .	18
1.5 Graded rings and modules . . . . .	27
1.6 The Koszul complex . . . . .	39
Notes . . . . .	54
<b>2 Cohen–Macaulay rings</b>	<b>56</b>
2.1 Cohen–Macaulay rings and modules . . . . .	56
2.2 Regular rings and normal rings . . . . .	64
2.3 Complete intersections . . . . .	72
Notes . . . . .	84
<b>3 The canonical module. Gorenstein rings</b>	<b>87</b>
3.1 Finite modules of finite injective dimension . . . . .	87
3.2 Injective hulls. Matlis duality . . . . .	96
3.3 The canonical module . . . . .	106
3.4 Gorenstein ideals of grade 3. Poincaré duality . . . . .	119
3.5 Local cohomology. The local duality theorem . . . . .	126
3.6 The canonical module of a graded ring . . . . .	135
Notes . . . . .	143
<b>4 Hilbert functions and multiplicities</b>	<b>146</b>
4.1 Hilbert functions of graded modules . . . . .	146
4.2 Macaulay’s theorem on Hilbert functions . . . . .	154
4.3 Further constraints on Hilbert functions . . . . .	165
4.4 Filtered rings . . . . .	174
4.5 The Hilbert–Samuel function and reduction ideals . . . . .	180
4.6 The multiplicity symbol . . . . .	185
Notes . . . . .	194
<b>II Classes of Cohen–Macaulay rings</b>	<b>197</b>
<b>5 Stanley–Reisner rings</b>	<b>199</b>
5.1 Simplicial complexes . . . . .	199
5.2 Polytopes . . . . .	215

5.3	Local cohomology of Stanley–Reisner rings . . . . .	221
5.4	The upper bound theorem . . . . .	229
5.5	Gorenstein complexes . . . . .	232
5.6	The canonical module of a Stanley–Reisner ring . . . . .	236
	Notes . . . . .	243
<b>6</b>	<b>Semigroup rings and invariant theory</b>	<b>245</b>
6.1	Affine semigroup rings . . . . .	245
6.2	Local cohomology of affine semigroup rings . . . . .	252
6.3	Normal semigroup rings . . . . .	258
6.4	Invariants of tori and finite groups . . . . .	267
6.5	Invariants of linearly reductive groups . . . . .	280
	Notes . . . . .	287
<b>7</b>	<b>Determinantal rings</b>	<b>289</b>
7.1	Graded Hodge algebras . . . . .	289
7.2	Straightening laws on posets of minors . . . . .	294
7.3	Properties of determinantal rings . . . . .	300
	Notes . . . . .	307
<b>III</b>	<b>Homological theory</b>	<b>309</b>
<b>8</b>	<b>Big Cohen–Macaulay modules</b>	<b>311</b>
8.1	The annihilators of local cohomology . . . . .	311
8.2	The Frobenius functor . . . . .	315
8.3	Modifications and non-degeneracy . . . . .	318
8.4	Hochster’s finiteness theorem . . . . .	323
8.5	Balanced big Cohen–Macaulay modules . . . . .	330
	Notes . . . . .	334
<b>9</b>	<b>Homological theorems</b>	<b>336</b>
9.1	Grade and acyclicity . . . . .	336
9.2	Regular rings as direct summands . . . . .	342
9.3	Canonical elements in local cohomology modules . . . . .	345
9.4	Intersection theorems . . . . .	349
9.5	Ranks of syzygies . . . . .	355
9.6	Bass numbers . . . . .	359
	Notes . . . . .	363
	<b>Appendix: A summary of dimension theory</b>	<b>366</b>
	<b>References</b>	<b>374</b>
	<b>Notation</b>	<b>390</b>
	<b>Index</b>	<b>395</b>
