Preface	xv
Chapter 1 Introduction	xx
<i>Learning Objectives • Chapter Preview • Key Terms</i>	1
<i>What Is Multivariate Analysis?</i>	3
<i>Impact of the Computer Revolution</i>	4
<i>Multivariate Analysis Defined</i>	5
<i>Some Basic Concepts of Multivariate Analysis</i>	6
The Variate	6
Measurement Scales	6
Measurement Error and Multivariate Measurement	8
Statistical Significance versus Statistical Power	10
<i>Types of Multivariate Techniques</i>	13
Multiple Regression	13
Multiple Discriminant Analysis	13
Multivariate Analysis of Variance	14
Canonical Correlation	14
Linear Probability Models	14
Conjoint Analysis	15
Structural Equation Modeling	15
Factor Analysis	16
Cluster Analysis	16
Multidimensional Scaling	16
Correspondence Analysis	16
<i>A Classification of Multivariate Techniques</i>	17
<i>Guidelines for Multivariate Analyses and Interpretation</i>	21
Establish Practical Significance as Well as Statistical Significance	22
Sample Size Affects All Results	22
Know Your Data	23
Strive for Model Parsimony	23
Look at Your Errors	23
Validate Your Results	24
<i>A Structured Approach to Multivariate Model Building</i>	24
Stage One: Define the Research Problem, Objectives, and Multivariate Technique to be Used	25
Stage Two: Develop the Analysis Plan	25
Stage Three: Evaluate the Assumptions Underlying the Multivariate Technique	25
Stage Four: Estimate the Multivariate Model and Assess Overall Model Fit ..	26
Stage Five: Interpret the Variate(s)	26
Stage Six: Validate the Multivariate Model	26
<i>Databases</i>	27
Perceptions of HATCO	28
Purchaser Characteristics	28
<i>Summary • Questions • References</i>	29

Chapter 2 Examining Your Data	32
Learning Objectives • Chapter Preview • Key Terms	32
Introduction	35
Graphical Examination of the Data	36
The Nature of the Variable: Examining the Shape of the Distribution	37
Examining the Relationship Between Variables	38
Examining Group Differences	40
Multivariate Profiles	40
Summary	42
Missing Data	43
Understanding the Reasons Leading to Missing Data	43
Examining the Patterns of Missing Data	45
Diagnosing the Randomness of the Missing Data Process	45
Approaches for Dealing with Missing Data	46
An Illustration of Missing Data Diagnosis	50
Summary	57
Outliers	57
Detecting Outliers	58
Outlier Description and Profiling	59
Retention or Deletion of the Outlier	60
An Illustrative Example of Analyzing Outliers	60
Testing the Assumptions of Multivariate Analysis	62
Assessing Individual Variables Versus the Multivariate Model	64
Normality	64
Homoscedasticity	66
Linearity	68
Absence of Correlated Errors	69
Data Transformations	69
An Illustration of Testing the Assumptions Underlying Multivariate Analysis	71
Summary • Questions • References	75
Chapter 3 Multiple Regression Analysis	78
Learning Objectives • Chapter Preview • Key Terms	78
What is Multiple Regression Analysis?	85
Relating Independent to Dependent Variables with Regression	86
Prediction Without an Independent Variable	86
Prediction Using a Single Independent Variable—Simple Regression	88
Prediction Using Several Independent Variables: Multiple Regression Analysis	92
A Decision Process for Multiple Regression Analysis	97
Stage One: Objectives of Multiple Regression	97
Research Problems Appropriate for Multiple Regression	97
Specifying a Statistical Relationship	101
Selection of Dependent and Independent Variables	101
Stage Two: Research Design of a Multiple Regression Analysis	103
Sample Size	103
Fixed Versus Random Effects Predictors	105
Creating Additional Variables	106

Stage Three: Assumptions in Multiple Regression Analysis	110
Assessing Individual Variables Versus the Variate	110
Linearity of the Phenomenon	111
Constant Variance of the Error Term.....	113
Independent of the Error Terms	113
Normality of the Error Term Distribution	114
Summary	114
Stage Four: Estimating the Regression Model and Assessing Overall Fit	114
General Approaches to Variable Selection.....	115
Testing the Regression Variate for Meeting the Regression Assumptions	118
Examining the Statistical Significance of Our Model	118
Identifying Influential Observations.....	120
Stage Five: Interpreting the Regression Variate	124
Using the Regression Coefficients	125
Standardizing the Regression Coefficients: Beta Coefficients	125
Assessing Multicollinearity	126
Stage Six: Validation of the Results	128
Additional or Split Samples	128
Calculating the PRESS Statistic.....	128
Comparing Regression Models.....	129
Predicting with the Model.....	129
Regression with a Binary Dependent Variable	129
Unique Characteristics of Logit Analysis.....	130
Other Similarities	133
Illustration of a Regression Analysis	133
Stage One: Objectives of the Multiple Regression	133
Stage Two: Research Design of the Multiple Regression Analysis	134
Stage Three: Assumptions of the Multiple Regression Analysis.....	134
Stage Four: Estimating the Regression Model and Assessing Overall Fit	135
Stage Five: Interpreting the Variate.....	145
Stage Six: Validating the Results.....	147
Summary • Questions • References	148
Appendix 3A Advanced Diagnostics for Multiple Regression Analysis	150
Learning Objectives • Preview • Key Terms	150
Assessing Multicollinearity	152
A Two-Part Process	153
An Illustration of Assessing Multicollinearity.....	153
Identifying Influential Observations	154
Step 1: Examining Residuals	154
Step 2: Identifying Leverage Points from the Predictors.....	155
Step 3: Single-Case Diagnostics Identifying Influential Observations	156
Step 4: Selecting and Accommodating Influential Observations	157
Example from the HATCO Database.....	157
Summary • Questions • References	165
Chapter 4 Multiple Discriminant Analysis	178
Learning Objectives • Chapter Preview • Key Terms	178
What Is Discriminant Analysis?	181
Analogy with Regression and ANOVA	183

Hypothetical Example of Discriminant Analysis for Two Groups	184
A Geometric Representation of the Discriminant Function	187
A Hypothetical Example of a Three-group Discriminant Analysis	188
The Decision Process for Discriminant Analysis	191
Stage One: Objectives of Discriminant Analysis	191
Stage Two: Research Design for Discriminant Analysis	194
Selection of Dependent and Independent Variables	194
Sample Size	195
Division of the Sample	195
Stage Three: Assumptions of Discriminant Analysis	196
Stage Four: Estimation of the Discriminant Model and Assessing Overall Fit ..	197
Computational Method	197
Statistical Significance	198
Assessing Overall Fit	199
Stage Five: Interpretation of the Results	205
Discriminant Weights	206
Discriminant Loadings	206
Partial F values	206
Interpretation of Two or More Functions	207
Which Interpretive Method to Use?	209
Stage Six: Validation of the Results	209
Split-Sample or Cross-Validation Procedures	209
Profiling Group Differences	210
A Two-group Illustrative Example	211
Stage One: Objectives of the Discriminant Analysis	211
Stage Two: Research Design of the Discriminant Analysis	211
Stage Three: Assumptions of Discriminant Analysis	212
Stage Four: Estimation of the Discriminant Function and Assessing Overall Fit	212
Stage Five: Interpretation of the Discriminant Function	220
Stage Six: Validation of the Discriminant Results	221
A Three-group Illustrative Example	221
Stage One: Objectives of the Discriminant Analysis	222
Stage Two: Research Design of the Discriminant Analysis	222
Stage Three: Assumptions of Discriminant Analysis	222
Stage Four: Estimation of the Discriminant Function and Assessing Overall Fit	223
Stage Five: Interpretation of Three-group Discriminant Analysis Results	229
Stage Six: Validation of the Discriminant Results	237
Summary • Questions • References	237

Chapter 5 Multivariate Analysis of Variance	256
Learning Objectives • Chapter Preview • Key Terms	256
What is Multivariate Analysis of Variance?	261
The <i>t</i> test	261
Analysis of Variance (ANOVA)	262
Multivariate Analysis of Variance (MANOVA)	263

When Should We Use MANOVA?	265
Control of Experimentwide Error Rate.....	266
Differences Among a Combination of Dependent Variables.....	266
A Decision Process for MANOVA	266
Stage One: Objectives of MANOVA	268
Types of Multivariate Questions Suitable for MANOVA.....	268
Selecting the Dependent Measures.....	269
Stage Two: Issues in the Research Design of MANOVA	269
Sample Size Requirements—Overall and by Group	269
Factorial Designs—Two or More Treatments	270
Using Covariates—ANCOVA and MANCOVA	273
A Special Case of MANOVA: Repeated Measures	274
Stage Three: Assumptions of ANOVA and MANOVA	274
Independence	275
Equality of Variance-Covariance Matrices	275
Normality	276
Linearity and Multicollinearity Among the Dependent Variables	276
Sensitivity to Outliers	276
Stage Four: Estimation of the MANOVA Model and Assessing Overall Fit	277
Criteria for Significance Testing	277
Statistical Power of the Multivariate Tests	278
Stage Five: Interpretation of the MANOVA Results	280
Evaluating Covariates	280
Assessing the Dependent Variate	281
Identifying Differences Between Individual Groups.....	282
Stage Six: Validation of the Results	283
Summary	284
Example 1: Difference Between Two Independent Groups	284
A Univariate Approach: The t test	285
A Multivariate Approach: Hotelling's T^2	288
Example 2: Difference Between k Independent Groups	293
A Univariate Approach: k -Groups ANOVA	294
A Multivariate Approach: k -Groups MANOVA	297
Example 3: A Factorial Design for MANOVA with Two Independent Variables ..	302
Stage One: Objectives of the MANOVA.....	302
Stage Two: Research Design of the MANOVA.....	303
Stage Three: Assumptions in MANOVA.....	305
Stage Four: Estimation of the MANOVA Model and Assessing Overall Fit ...	306
Stage Five: Interpretation of the Results	308
Summary • Questions • References	311
Chapter 6 Canonical Correlation Analysis	326
Learning Objectives • Chapter Preview • Key Terms	326
What Is Canonical Correlation?	328
Hypothetical Example of Canonical Correlation	328
Analyzing Relationships with Canonical Correlation	329
Stage One: Objectives of Canonical Correlation Analysis	330
Stage Two: Designing a Canonical Correlation Analysis	330

Stage Three: Assumptions in Canonical Correlation	332
Stage Four: Deriving the Canonical Functions and Assessing Overall Fit	333
Which Canonical Functions Should Be Interpreted?	333
Stage Five: Interpreting the Canonical Variate	336
Canonical Weights.....	336
Canonical Loadings.....	337
Canonical Cross-Loadings.....	337
Which Interpretation Approach to Use	338
Stage Six: Validation and Diagnosis	338
An Illustrative Example	339
Stage 1: Objectives of Canonical Correlation Analysis.....	339
Stages 2 and 3: Designing a Canonical Correlation Analysis and Testing the Assumptions.....	339
Stage 4: Deriving the Canonical Functions and Assessing Overall Fit.....	339
Stage 5: Interpreting the Canonical Variates.....	342
Stage 6: Validation.....	344
Summary • Questions • References	344

Chapter 7 Factor Analysis	364
Learning Objectives • Chapter Preview • Key Terms	364
What Is Factor Analysis?	366
A Hypothetical Example of Factor Analysis	368
Factor Analysis Decision Diagram	368
Stage One: Objectives of Factor Analysis.....	368
Stage Two: Designing a Factor Analysis.....	372
Stage Three: Assumptions in Factor Analysis.....	374
Stage Four: Deriving Factors and Assessing Overall Fit.....	375
Stage Five: Interpreting the Factors.....	379
Stage Six: Validation of Factor Analysis.....	388
Stage Seven: Additional Uses of the Factor Analysis Results.....	389
An Illustrative Example	391
Stage One: Objectives of Factor Analysis.....	391
Stage Two: Designing a Factor Analysis.....	391
Stage Three: Assumptions in Factor Analysis.....	392
Stage Four: Deriving Factors and Assessing Overall Fit.....	394
Stage Five: Interpreting the Factors.....	394
Stage Six: Validation of Factor Analysis.....	398
Stage Seven: Additional Uses of the Factor Analysis Results.....	400
Common Factor Analysis: Stages 4 and 5	402
Stage Four: Deriving Factors and Assessing Overall Fit.....	402
Stage Five: Interpreting the Factors.....	404
Summary • Questions • References	404

Chapter 8 Cluster Analysis	420
Learning Objectives • Chapter Preview • Key Terms	420
What Is Cluster Analysis?	423
How Does Cluster Analysis Work?	424
Cluster Analysis Decision Process	425

Stage One: Objectives of Cluster Analysis	426
Stage Two: Research Design in Cluster Analysis	428
Detecting Outliers	429
Similarity Measures	429
Standardizing the Data	434
Stage Three: Assumptions in Cluster Analysis	435
Stage Four: Deriving Clusters and Assessing Overall Fit	436
Clustering Algorithms	437
How Many Clusters Should Be Formed?	442
Should the Cluster Analysis Be Respecified?	443
Stage Five: Interpretation of the Clusters	443
Stage Six: Validation and Profiling of the Clusters	444
An Illustrative Example	445
Stage One: Objectives of the Cluster Analysis	445
Stage Two: Research Design of the Cluster Analysis	445
Stage Three: Assumptions in Cluster Analysis	445
Stage Four: Deriving Clusters and Assessing Overall Fit	445
Stage Five: Interpretation of the Clusters	453
Stage Six: Validation and Profiling of the Clusters	454
Summary • Questions • References	455
Chapter 9 Multidimensional Scaling	484
Learning Objectives • Chapter Preview • Key Terms	484
What Is Multidimensional Scaling?	488
A Simplified Look at How Multidimensional Scaling Works	489
Comparing MDS to Other Interdependence Techniques	491
A Decision Framework for Perceptual Mapping	492
Stage One: Objectives of Multidimensional Scaling	492
Identification of All Relevant Objects to Be Evaluated	494
Similarities Versus Preference Data	495
Aggregate Versus Disaggregate Analysis	495
Stage Two: Research Design of Multidimensional Scaling	496
Selection of Either a Decompositional (Attribute-free) or Compositional (Attribute-based) Approach	496
Objects: Their Number and Selection	499
Nonmetric Versus Metric Methods	499
Collection of Similarity or Preference Data	500
Stage Three: Assumptions of Multidimensional Scaling Analysis	502
Stage Four: Deriving the MDS Solution and Assessing Overall Fit	503
Determining an Object's Position in the Perceptual Map	503
Selecting the Dimensionality of the Perceptual Map	504
Incorporating Preferences into Multidimensional Scaling	506
Stage Five: Interpreting the MDS Results	510
Identifying the Dimensions	511
Stage Six: Validating the MDS Results	512
Correspondence Analysis	513
Stage One: Objectives of Correspondence Analysis	513
Stage Two: Research Design of Correspondence Analysis	514
Stage Three: Assumptions in Correspondence Analysis	514

Stage Four: Deriving the Correspondence Analysis Results and Assessing Overall Fit	514
Stage Five: Interpretation of Results	515
Stage Six: Validation of the Results	515
Overview of Correspondence Analysis	515
Illustration of Multidimensional Scaling and Correspondence Analysis	516
Stage One: Objectives of Perceptual Mapping	516
Stage Two: Research Design of the Perceptual Mapping Study	517
Stage Three: Assumptions in Perceptual Mapping	518
Multidimensional Scaling: Stages Four and Five	518
Correspondence Analysis: Stages Four and Five	523
Stage Five: Interpreting the Correspondence Analysis Results	525
Stage Six: Validation of the Results	526
Summary • Questions • References	527
Chapter 10 Conjoint Analysis	556
Learning Objectives • Chapter Preview • Key Terms	556
What Is Conjoint Analysis?	560
A Hypothetical Example of Conjoint Analysis	561
The Managerial Uses of Conjoint Analysis	562
Comparing Conjoint Analysis with Other Multivariate Methods	562
Compositional Versus Decompositional Techniques	562
Specifying the Conjoint Variate	563
Separate Models for Each Individual	563
Types of Relationships	564
Designing a Conjoint Analysis Experiment	564
Stage One: The Objectives of Conjoint Analysis	564
Defining the Total Worth of the Object	567
Specifying the Determinant Factors	567
Stage Two: The Design of a Conjoint Analysis	568
Designing Stimuli	568
Data Collection	572
Stage Three: Assumptions of Conjoint Analysis	577
Stage Four: Estimating the Conjoint Model and Assessing Overall Fit	577
Selecting an Estimation Technique	578
Evaluating the Results	578
Stage Five: Interpreting the Results	579
Aggregate Versus Disaggregate Analysis	579
Assessing the Relative Importance of Attributes	579
Stage Six: Validation of the Conjoint Results	579
Stage Seven: Applying Conjoint Analysis Results	580
Segmentation	580
Profitability Analysis	580
Conjoint Simulators	580
Special Topics in Conjoint Analysis	581
Conjoint Analysis with a Large Number of Factors	581
Choice-based Conjoint	582

An Illustration of Conjoint Analysis	585
Stage One: Objectives of the Conjoint Analysis.....	585
Stage Two: Design of the Conjoint Analysis	586
Stage Three: Assumptions in Conjoint Analysis.....	587
Stage Four: Estimating the Conjoint Model and Assessing Overall Model Fit	587
Stage Five: Interpreting the Results	589
Stage Six: Validation of the Results	590
Stage Seven: Application of a Choice Simulator	591
Summary	592
Appendix 10A: An Illustration of Conjoint Analysis	594
Preview	594
Assuming an Additive Model	595
When Is an Interactive Composition Rule Appropriate?	598
Checking for Interactions	598
Summary • Questions • References	599
Chapter 11 Structural Equation Modeling	616
Learning Objectives • Chapter Preview • Key Terms	616
What Is Structural Equation Modeling?	622
Accommodating Multiple Interrelated Dependence Relationships	622
Incorporating Variables That We Do Not Measure Directly	623
The Role of Theory in Structural Equation Modeling	624
Developing a Modeling Strategy	625
Steps in Structural Equation Modeling	626
Step One: Developing a Theoretically Based Model	626
Step Two: Constructing a Path Diagram of Causal Relationships	629
Step Three: Converting the Path Diagram Into a Set of Structural Equations	
and Specifying the Measurement Model.....	631
Step Four: Choosing the Input Matrix Type and Estimating the Proposed	
Model	635
Step Five: Assessing the Identification of the Structural Model	638
Step Six: Evaluating Goodness-of-Fit Criteria	639
Step Seven: Interpreting and Modifying the Model	644
A Recap of the Seven-Step Process.....	645
Two Illustrations of Structural Equation Modeling	645
A Confirmatory Factor Analysis	645
Step One: Developing a Theoretically Based Model	646
Step Two: Constructing a Path Diagram of Causal Relationships	646
Step Three: Converting the Path Diagram Into A Set of Structural Equations	
and Specifying the Measurement Model.....	647
Step Four: Choosing the Input Matrix Type and Estimating the Proposed	
Model	648
Step Five: Assessing the Identification of the Structural Model	648
Step Six: Evaluating Goodness-of-Fit Criteria	649
Step Seven: Interpreting and Modifying the Model	654
Summary	654

Estimating a Path Model With Structural Equation Modeling	655
Step One: Developing a Theoretically Based Model	656
Step Two: Constructing a Path Diagram of Causal Relationships	657
Step Three: Converting the Path Diagram Into A Set of Structural Equations and Specifying the Measurement Model	658
Step Four: Choosing the Input Matrix Type and Estimating the Proposed Model	658
Step Five: Assessing the Identification of the Structural Model	659
Step Six: Evaluating Goodness-of-Fit Criteria	659
Step Seven: Interpreting and Modifying the Model	668
Review of the Structural Equation Modeling Process	670
Summary • Questions • References	670
Appendix 11A A Mathematical Representation in LISREL Notation	672
LISREL Notation	672
From a Path Diagram to LISREL Notation	674
Constructing Structural Equations from the Path Diagram	675
Summary	679
Appendix 11B Path Analysis: A Method of Computing Structural Coefficients	680
Appendix 11C Overall Goodness-of-fit Measures for Structural Equation Modeling	682
Measures of Absolute Fit	683
Incremental Fit Measures	685
Parsimonious Fit Measures	686
Summary • References	688
 Appendix A: Applications of Multivariate Data Analysis	708
Index	I-1
