<i>Preface by Chris Freeman</i>	xi
<i>Introduction</i>	xiii
 PART ONE INVESTMENT IN KNOWLEDGE AND MACHINERY: THEORY AND PERSPECTIVES	
1. Disembodied and embodied technological change: concepts and definitions	3
2. Disembodied and embodied perspectives on technological change in the economic literature	11
3. Disembodied and embodied technological change in the innovation literature	27
4. Embodied and disembodied perspectives on the relationship between technological change, firm size and market structure	47
5. Towards an integrated perspective on technological change and industrial structure: issues for research	68
 PART TWO EVIDENCE FROM THE ITALIAN INDUSTRY	
6. An overview of innovation activities in manufacturing and services	83
7. Embodied and disembodied innovation strategies and the production structure of firms	111
8. Innovation strategies and the productive structure of firms: do industrial sectors matter?	132
9. Innovative patterns and technological regimes of production: a sectoral analysis	151
10. Embodied and disembodied patterns of technological change and production structure: a sectoral taxonomy	164
11. Conclusions and policy implications	181
<i>Bibliography</i>	186
<i>Index</i>	197

List of figures

5.1	Embodied and disembodied views on technological change	69
5.2	Technological change and industrial structure: the neo-Schumpeterian links	71
5.3	Technological change and industrial structure: embodied and disembodied links	77
6.1	Breakdown of innovation costs in the Italian manufacturing sector (1992)	94
6.2	Breakdown of innovation costs in the Italian service sector (1995)	95
6.3	Breakdown of innovation costs across European countries	96
9.1	Innovative intensity and the share of R&D and D&E expenditures	153
9.2	Disembodied innovative intensity and the share of process innovations	154
9.3	Disembodied and embodied sectoral innovative patterns	157
9.4	Total investment in machinery and innovative investment	158
9.5	R&D and D&E expenditures per employee and firm size	161
10.1	Scatterplot of the sectors according to the two factors	167
10.2	Disembodied and embodied innovative patterns and industrial structure: a taxonomy	171

List of tables

6.1	Innovating and non-innovating firms in manufacturing and services by firm size	85
6.2	Percentages of innovating firms across firm size in Europe (manufacturing sector, 1992)	86
6.3	Innovating and non-innovating firms in manufacturing and service industries	88
6.4	Probability of carrying out innovative activities and R&D (logit estimates) (Italian manufacturing sector, 1990–92)	89
6.5	Innovating manufacturing firms by type of innovation introduced	91
6.6	Innovating service firms by type of innovation introduced	92
6.7	Innovation expenditure by firm size (percentage values) (Italian manufacturing sector, 1992)	97
6.8	Innovation expenditure by industry and firm size (percentage values) (Italian manufacturing sector, 1992)	98
6.9	Breakdown of innovation costs by industry in the service sector (1995)	100
6.10	Distribution of total sales according to the type of innovation introduced (percentage values) (Italian manufacturing sector, 1992)	102
6.11	Sales according to the degree of novelty of the product innovations introduced (percentage values) (Italian manufacturing sector, 1992)	103
6.12	Sources of technological information in manufacturing and services	104
6.13	Objectives of innovation in manufacturing and services	105
6.14	Obstacles to innovation in manufacturing and services	105
7.1	List of production and innovative indicators used in the empirical analysis	113
7.2	Total innovation costs and embodied and disembodied innovation expenditures (correlation and elasticity coefficients)	115
7.3	Distribution of firms according to the type of technological activity performed across firm size classes (1981–85)	116
7.4	Total innovation costs and embodied and disembodied innovation expenditures (correlation and elasticity coefficients) (R&D and D&E performing firms)	117

7.5	Embodied and disembodied innovative intensity indicators and product/process innovation shares (correlation coefficients)	117
7.6	The relationship between embodied and disembodied innovation expenditures (correlation and elasticity coefficients)	119
7.7	Innovative intensity, firm size and labour productivity (correlation coefficients)	121
7.8	Determinants of labour productivity (regression estimates)	122
7.9	Innovative intensity by firm size (average values)	124
7.10	Innovation intensity and firm size by industry	126
7.11	List of variables used in the factor analysis	128
7.12	Results of the factor analysis	129
8.1	Analysis of variance at different levels of sectoral aggregation	134
8.2	Analysis of variance at different levels of sectoral aggregation and cut-off in firm size	136
8.3	Elasticity of embodied and disembodied innovation expenditures with respect to total innovation costs (LSDV estimations)	140
8.4	The relationship between embodied and disembodied innovation expenditures (LSDV estimations)	143
8.5	Firm size and capital intensity (LSDV estimations)	145
8.6	The determinants of labour productivity (LSDV estimations)	146
9.1	Innovative intensity and product/process innovation shares across sectors (correlation coefficients – 108 sectors)	152
9.2	The relationship between embodied and disembodied innovation activities across sectors (correlation coefficients – 108 sectors)	156
9.3	Innovative intensity and firm size across sectors (correlation coefficients – 108 industrial sectors)	159
9.4	Firm size, capital intensity and productivity across sectors (correlation coefficients – 108 industrial sectors)	161
10.1	List of variables used in the 'sectoral' factor analysis	165
10.2	Results of the factor analysis (108 sectors)	166
10.3	Results of the factor analysis (30 sectors)	169
10.4	Productive and technological profiles by sectoral clusters (average values)	170
