

Bernhard Korte
Jens Vygen

Combinatorial Optimization

Theory and Algorithms

Third Edition

 Springer

Table of Contents

1. Introduction	1
1.1 Enumeration	2
1.2 Running Time of Algorithms	5
1.3 Linear Optimization Problems	8
1.4 Sorting	9
Exercises	11
References	12
2. Graphs	13
2.1 Basic Definitions	13
2.2 Trees, Circuits, and Cuts	17
2.3 Connectivity	24
2.4 Eulerian and Bipartite Graphs	30
2.5 Planarity	33
2.6 Planar Duality	40
Exercises	42
References	46
3. Linear Programming	49
3.1 Polyhedra	50
3.2 The Simplex Algorithm	53
3.3 Duality	57
3.4 Convex Hulls and Polytopes	60
Exercises	62
References	63
4. Linear Programming Algorithms	65
4.1 Size of Vertices and Faces	65
4.2 Continued Fractions	68
4.3 Gaussian Elimination	70
4.4 The Ellipsoid Method	74
4.5 Khachiyan's Theorem	80
4.6 Separation and Optimization	82
Exercises	88
References	90

5. Integer Programming	91
5.1 The Integer Hull of a Polyhedron	92
5.2 Unimodular Transformations	96
5.3 Total Dual Integrality	97
5.4 Totally Unimodular Matrices	101
5.5 Cutting Planes	106
5.6 Lagrangean Relaxation	110
Exercises	112
References	115
6. Spanning Trees and Arborescences	119
6.1 Minimum Spanning Trees	119
6.2 Minimum Weight Arborescences	125
6.3 Polyhedral Descriptions	129
6.4 Packing Spanning Trees and Arborescences	132
Exercises	136
References	139
7. Shortest Paths	143
7.1 Shortest Paths From One Source	144
7.2 Shortest Paths Between All Pairs of Vertices	148
7.3 Minimum Mean Cycles	151
Exercises	153
References	155
8. Network Flows	157
8.1 Max-Flow-Min-Cut Theorem	158
8.2 Menger's Theorem	162
8.3 The Edmonds-Karp Algorithm	164
8.4 Blocking Flows and Fujishige's Algorithm	166
8.5 The Goldberg-Tarjan Algorithm	168
8.6 Gomory-Hu Trees	172
8.7 The Minimum Cut in an Undirected Graph	179
Exercises	181
References	186
9. Minimum Cost Flows	191
9.1 Problem Formulation	191
9.2 An Optimality Criterion	193
9.3 Minimum Mean Cycle-Cancelling Algorithm	195
9.4 Successive Shortest Path Algorithm	199
9.5 Orlin's Algorithm	203
9.6 Flows Over Time	206
Exercises	208
References	212

10. Maximum Matchings	215
10.1 Bipartite Matching	216
10.2 The Tutte Matrix	218
10.3 Tutte's Theorem	220
10.4 Ear-Decompositions of Factor-Critical Graphs	223
10.5 Edmonds' Matching Algorithm	229
Exercises	238
References	242
11. Weighted Matching	245
11.1 The Assignment Problem	246
11.2 Outline of the Weighted Matching Algorithm	247
11.3 Implementation of the Weighted Matching Algorithm	250
11.4 Postoptimality	263
11.5 The Matching Polytope	264
Exercises	267
References	269
12. b-Matchings and T-Joins	271
12.1 b -Matchings	271
12.2 Minimum Weight T -Joins	275
12.3 T -Joins and T -Cuts	279
12.4 The Padberg-Rao Theorem	282
Exercises	285
References	288
13. Matroids	291
13.1 Independence Systems and Matroids	291
13.2 Other Matroid Axioms	295
13.3 Duality	299
13.4 The Greedy Algorithm	303
13.5 Matroid Intersection	308
13.6 Matroid Partitioning	313
13.7 Weighted Matroid Intersection	314
Exercises	318
References	320
14. Generalizations of Matroids	323
14.1 Greedoids	323
14.2 Polymatroids	327
14.3 Minimizing Submodular Functions	331
14.4 Schrijver's Algorithm	333
14.5 Symmetric Submodular Functions	337
Exercises	339
References	341

15. NP-Completeness	343
15.1 Turing Machines	343
15.2 Church's Thesis	345
15.3 P and NP	350
15.4 Cook's Theorem	354
15.5 Some Basic NP -Complete Problems	358
15.6 The Class $coNP$	365
15.7 NP -Hard Problems	367
Exercises	371
References	374
16. Approximation Algorithms	377
16.1 Set Covering	378
16.2 Colouring	383
16.3 Approximation Schemes	390
16.4 Maximum Satisfiability	392
16.5 The PCP Theorem	397
16.6 L-Reductions	401
Exercises	407
References	410
17. The Knapsack Problem	415
17.1 Fractional Knapsack and Weighted Median Problem	415
17.2 A Pseudopolynomial Algorithm	418
17.3 A Fully Polynomial Approximation Scheme	420
Exercises	422
References	423
18. Bin-Packing	425
18.1 Greedy Heuristics	425
18.2 An Asymptotic Approximation Scheme	431
18.3 The Karmarkar-Karp Algorithm	435
Exercises	438
References	439
19. Multicommodity Flows and Edge-Disjoint Paths	443
19.1 Multicommodity Flows	444
19.2 Algorithms for Multicommodity Flows	447
19.3 Directed Edge-Disjoint Paths Problem	451
19.4 Undirected Edge-Disjoint Paths Problem	455
Exercises	460
References	463

20. Network Design Problems	467
20.1 Steiner Trees	468
20.2 The Robins-Zelikovsky Algorithm	473
20.3 Survivable Network Design	478
20.4 A Primal-Dual Approximation Algorithm	481
20.5 Jain's Algorithm	489
Exercises	495
References	498
21. The Traveling Salesman Problem	501
21.1 Approximation Algorithms for the TSP	501
21.2 Euclidean TSPs	506
21.3 Local Search	513
21.4 The Traveling Salesman Polytope	519
21.5 Lower Bounds	525
21.6 Branch-and-Bound	527
Exercises	530
References	532
22. Facility Location	537
22.1 The Uncapacitated Facility Location Problem	537
22.2 Rounding Linear Programming Solutions	539
22.3 Primal-Dual Algorithms	541
22.4 Scaling and Greedy Augmentation	547
22.5 Bounding the Number of Facilities	550
22.6 Local Search	553
22.7 Capacitated Facility Location Problems	559
22.8 Universal Facility Location	561
Exercises	568
References	570
Notation Index	573
Author Index	577
Subject Index	585
