Preface for the First Edition xi

Preface for the Second Edition xiii

1. Neural Induction 1

- Development and Evolution of Neurons 1
- Early Embryology of Metazoans 1
- Derivation of Neural Tissue 3
- Interactions with Neighboring Tissues in Making Neural Tissue 9
- The Molecular Nature of the Neural Inducer 13
- Conservation of Neural Induction 16
- Interactions Among the Ectodermal Cells in Controlling Neuroblast Segregation 20
- Notch, Delta, and Achaete Scute Genes in Vertebrates 25
- Linking Induction to Proneural Activity 27
- Summary 28

2. Polarity and Segmentation 29

- Regional Identity of the Nervous System 29
- The Anterior-Posterior Axis and *HOX* Genes 30
- HOX* Gene Function in the Nervous System 33
- Signaling Molecules that Pattern the Anterior-Posterior Axis in Vertebrates: Heads or Tails 36
- Organizing Centers in the Developing Brain 39
- Forebrain Development, Prosomeres, and *PAX* Genes 42
- Dorsal-Ventral Polarity in the Neural Tube 46
- Dorsal Neural Tube and Neural Crest 50
- Patterning the Cerebral Cortex 52
- Summary 55

3. Genesis and Migration 57

- Cell-Cycle Genes Control the Number of Neurons Generated during Development 62

- Cell Interactions Control the Number of Cells Made by Progenitors 63
- The Generation of Neurons and GLIA 69
- Cerebral Cortex Histogenesis 71
- The Subventricular Zone: A Secondary Zone of Neurogenesis 75
- Cerebellar Cortex Histogenesis 76
- Molecular Mechanisms of Neuronal Migration 78
- Postembryonic and Adult Neurogenesis 82
- Summary 85

4. Determination and Differentiation 87

- Transcriptional Hierarchies in Invariant Lineages 88
- Spatial and Temporal Coordinates of Determination 91
- Asymmetric Cell Divisions and Asymmetric Fate 93
- Generating Complexity through Cellular Interactions 94
- Specification and Differentiation through Cellular Interactions and Interactions with the Local Environment 97
- Competence and Histogenesis 100
- The Interplay of Intrinsic and Extrinsic Influences in Histogenesis 102
- Interpreting Gradients and the Spatial Organization of Cell Types 106
- Summary 109

5. Axon Growth and Guidance 111

- The Growth Cone 114
- The Dynamic Cytoskeleton 116
- What Do Growth Cones Grow On? 121
- What Provides Directional Information to Growth Cones? 123
- Cell Adhesion and Labeled Pathways 124
- Repulsive Guidance 127

Chemotaxis, Gradients, and Local Information	130	Converting Growth Cones to Presynaptic Terminals	221
The Optic Pathway	133	Receptor Clustering Signifies Postsynaptic Differentiation at NMJ	222
The Midline	134	Presynaptic Terminals Induce Receptor Aggregation	224
Attraction and Repulsion: Desensitization and Adaptation	134	Agrin, a Transynaptic Clustering Signal	226
Signal Transduction	137	Postsynaptic Response to Agrin	227
Summary	138	Receptor Clustering Signals in the CNS	229
		Internal Membrane Proteins and Receptor Aggregation in the CNS	230
6. Target Selection	145	The Expression and Insertion of New Receptors	233
Defasciculation	145	Neuronal Activity Regulates Receptor Expression	235
Target Recognition and Entry	147	Neuregulin, a Regulator of Postsynaptic Transcription	236
Slowing Down and Branching	148	Maturation of Transmission and Receptor Isoform Transitions	238
Border Patrol and Prevention of Inappropriate Targeting	149	Maturation of Transmitter Reuptake	241
Topographic Mapping	152	Short-Term Plasticity	242
Chemospecificity and Ephrins	153	Appearance of Synaptic Inhibition	243
Shifting and Fine Tuning of Connections	158	Is Inhibition Really Inhibitory during Development?	243
The Third Dimension, Lamina-Specific Termination	162	Summary	244
Cellular and Synaptic Targeting	164		
Sniffing Out Targets	166	9. Refinement of Synaptic Connections	247
Summary	170	The Early Pattern of Connections	247
		Functional Synapses are Eliminated	249
7. Naturally Occurring Neuron Death	173	Axonal Arbors are Refined or Eliminated	250
What does Neuron Death Look Like?	173	Some Terminals Expand or Remain Stable	255
Early Elimination of Progenitor Cells	174	Neural Activity Regulates Synaptic Connections	255
How Many Differentiated Neurons Die?	174	Sensory Coding Properties Reflect Synapse Rearrangement	262
Survival Depends on the Synaptic Target	176	Activity Contributes to the Alignment of Sensory Maps	265
NGF: A Target-Derived Survival Factor	180	Spontaneous Activity and Afferent Segregation	267
The Neurotrophin Family	182	Many Forms of Plasticity have a Time Limit	271
The TRK Family of Neurotrophin Receptors	184	Synapses Interact Over a Short Distance	271
How does the Neurotrophin Signal Reach the Soma?	186	Heterosynaptic Depression	272
The P75 Neurotrophin Receptor	186	Postsynaptic Receptors are Eliminated	274
The Expanding World of Survival Factors	188	Involvement of Intracellular Calcium	276
Endocrine Control of Cell Survival	190	NMDA Receptors and Calcium Signaling	276
Cell Death Requires Protein Synthesis	192	The Role of Second Messenger Systems	278
Intracellular Signaling	193	Metabotropic Receptors	279
Caspases: Agents of Death	196	Gain Control	280
BCL-2 Proteins: Regulators of Apoptosis	200	Silent Synapses	282
Synaptic Transmission at the Target	201	Homeostasis: The More Things Change, the More They Stay the Same	283
Afferent Regulation of Cell Survival	202	Plasticity of Inhibitory Connections	284
Summary	206	Synaptic Influence on Neuron Morphology	285
		Summary	287
8. Synapse Formation and Function	207		
What Do Newly Formed Synapses Look Like?	211	10. Behavioral Development	289
The First Signs of Synapse Function	215	Behavioral Ontogeny	289
The Decision to Form a Synapse	218	Genetic and Environmental Mechanisms	290
The Sticky Synapse	220		

- Environmental Determinants of Behavioral
Development 291
- The First Movements 291
- The Mechanism of Spontaneous Movements 293
- Embryonic Movements: Uncoordinated or Integrated? 294
- The Role of Activity in the Emergence of Coordinated
Behavior 296
- Stage-Specific Behaviors 297
- Beginning to Make Sense of the World 299
- Asking Babies Questions 300
- Sharp Eyesight 301
- Acute Hearing 302
- Sex-Specific Behavior 305
- Genetic Sex 306
- Hormonal Signals 306
- Hormonal Control of Brain Gender 307
- Genetic Control of Brain Gender 308
- Singing in the Brain 309
- From Gonads to Brain? 310
- Learning to Remember 311
- Where's Mamma? 312
- Fear and Loathing 314
- Getting Information from One Brain to Another 317
- Language 319
- Summary 321
- References 323**
- Index 361**
