Contents

1	Introduction	1
1.1	Systems and System Models	1
1.2	System Elements, Their Characteristics, and the Role of Integration	4
1.3	Linearization	6
1.4	Synopsis	11
	Problems	12
2	Mechanical Systems	15
2.1	Introduction	15
2.2	Translational Mechanical Systems	17
2.2.1	Translational Masses	17
2.2.2	Translational Springs	20
2.2.3	Translational Dampers	24
2.2.4	Elementary Systems—Combinations of Translational Elements	25
2.3	Rotational Mechanical Systems	33
2.3.1	Rotational Inertias	33
2.3.2	Rotational Springs	34
2.3.3	Rotational Dampers	36
2.4	Synopsis	40
	Problems	41
3	Simulation Blocks Diagrams	47
3.1	Introduction	47

- 3.2 Functional Blocks and Their Mathematical Descriptions 48
 - 3.2.1 Coefficient Blocks 48
 - 3.2.2 Summation Blocks 48
 - 3.2.3 Integration and Differentiation Blocks 48
 - 3.2.4 Drawing Complete Diagrams from Describing Equations 49
 - 3.2.5 A Step-by-Step Approach for a System Described by n State Variables 55
- 3.3 Synopsis 57
- Problems 58

4 Mathematical Models 59

- 4.1 Introduction 59
- 4.2 Input-Output Models 60
- 4.3 State Models 66
- 4.4 Transition Between Input-Output and State Models 72
- 4.5 Nonlinearities in Input-Output and State Models 75
- 4.6 Synopsis 77
- Problems 78

5 Analytical Solutions of System Input-Output Equations 82

- 5.1 Introduction 82
- 5.2 Analytical Solutions of Linear Differential Equations 83
- 5.3 Determining Initial Conditions at $t = 0^+$ 85
- 5.4 First-Order Models 87
- 5.5 Second-Order Models 95
 - 5.5.1 Free Response 95
 - 5.5.2 Step Response 101
- 5.6 Third- and Higher-Order Models 108
- 5.7 Synopsis 110
- Problems 112

6 Digital Computer Simulation 118

- 6.1 Introduction 118
- 6.2 Euler's Method 119

- 6.3 More Accurate Methods 122
- 6.4 Effect of Integration Step Size on Accuracy 129
- 6.5 Synopsis 132
- Problems 133

7 Electrical Systems 135

- 7.1 Introduction 135
- 7.2 Diagrams, Symbols, and Circuit Laws 136
- 7.3 Elemental Diagrams, Equations, and Energy Storage 138
- 7.4 Analysis of Systems of Interacting Electrical Elements 141
- 7.5 Linear Time-varying Electrical Elements 148
- 7.6 Synopsis 150
- Problems 151

8 Thermal Systems 159

- 8.1 Introduction 159
- 8.2 Basic Mechanisms of Heat Transfer 160
- 8.3 Lumped Models of Thermal Systems 163
- 8.4 Synopsis 170
- Problems 170

9 Fluid Systems 176

- 9.1 Introduction 176
- 9.2 Fluid System Elements 177
- 9.3 Analysis of Fluid Systems 182
- 9.4 Pneumatic Systems 185
- 9.5 Synopsis 193
- Problems 194

10 Mixed Systems 200

- 10.1 Introduction 200
- 10.2 Energy-Converting Transducers and Devices 200
- 10.3 Signal-Converting Transducers 205
- 10.4 Application Examples 206
- 10.5 Synopsis 211
- Problems 211

11	System Transfer Functions	221
11.1	Introduction	221
11.2	Examples of Exponential Inputs	222
11.3	System Response to an Exponential Input	222
11.4	Use of Block Diagrams in System Modeling	224
11.4.1	Elementary Block Diagrams	224
11.4.2	Combining Elementary "Building Block" Diagrams	225
11.5	Transfer Functions and Performance Characteristics	228
11.6	Synopsis	229
	Problems	230
12	Frequency Analysis	233
12.1	Introduction	233
12.2	Frequency Response Transfer Functions	234
12.3	Bode Diagrams	234
12.4	Polar Plot Diagrams	243
12.5	Synopsis	246
	Problems	246
13	Closed-Loop Systems and System Stability	250
13.1	Introduction	250
13.2	Basic Definitions and Terminology	253
13.3	Algebraic Stability Criteria	255
13.4	Nyquist Stability Criterion	260
13.5	Quantitative Measures of Stability	263
13.6	Root Locus Method	266
13.7	Synopsis	271
	Problems	272
14	Control Systems	275
14.1	Introduction	275
14.2	Steady-State Control Error	276
14.3	Steady-State Disturbance Sensitivity	280
14.4	Interrelation of Steady-State and Transient Considerations	284

14.5	Industrial Controllers	286
14.6	System Compensation	290
14.7	Synopsis	294
	Problems	295

15 Analysis of Discrete-Time Systems 300

15.1	Introduction	300
15.2	Mathematical Modeling	301
	15.2.1 Input-Output Model	301
	15.2.2 State Models	305
15.3	Sampling and Holding Devices	308
15.4	The z Transform	312
	15.4.1 Definition and Basic z Transforms	312
	15.4.2 z Transform Theorems	314
	15.4.3 Inverse z Transform	314
15.5	Pulse Transfer Function	317
15.6	Synopsis	320
	Problems	320

16 Digital Control Systems 323

16.1	Introduction	323
16.2	Single-Loop Control Systems	323
16.3	Transient Performance	325
16.4	Steady-State Performance	331
16.5	Digital Controllers	334
16.6	Synopsis	337
	Problems	338

APPENDIX 1	Fourier Series and the Fourier Transform	341
-------------------	---	------------

APPENDIX 2	Laplace Transform	346
-------------------	--------------------------	------------

APPENDIX 3	Digital Simulation Program	352
-------------------	---------------------------------------	------------

GLOSSARY	361
-----------------	------------

Index	365
--------------	------------
