Mechanical Behavior of Fine-grained Model Materials During Cyclic Shearing

von

Sascha Richter

Karlsruhe 2006

ISSN 0453-3267

Contents

1	Introduction	1
2	State of knowledge and objectives	3
2.1	Grain contacts and granular assemblies	3
2.2	The effective stress concept	6
2.3	Shear modulus G of granular material during cyclic shearing	6
2.3.1	Influence of shear strain amplitude γ	8
2.3.2	Influence of mean effective pressure p' and void ratio e	9
2.3.3	Influence of time – aging	10
2.3.4	Influence of shear strain rate $\dot{\gamma}$	10
2.4	Energy dissipation in granular materials – damping	11
2.5	Objectives of the present study	13
3	Investigated materials	15
3.1	Fine aluminum oxide powders	15
3.2	Coarse aluminum oxide powders and sand	17
3.3	Laponite	18
3.4	Natural silt	20
4	Processes at particle surfaces and particle interaction	23
4.1	Oxide minerals – α -aluminum oxide	23
4.1.1	The origin of charged oxide surfaces	23

4.1.2	Surface interaction potential – DLVO theory	25
4.2	Layered minerals – Laponite	29
4.2.1	Composition and charge distribution	29
4.2.2	Aggregation of Laponite particles	31
4.3	Effective and interparticle stress	36
5	Experimental methods	37
5.1	Resonant column experiments	37
5.1.1	Single degree of freedom system	37
5.1.2	Principle of resonant column device	40
5.1.3	Configuration of resonant column device	43
5.1.4	Determination of G , damping ratio D and shear strain amplitude γ	48
5.1.5	Experimental procedure	49
5.1.6	Characterization of damping	50
5.1.7	Measurement of matrix suction	51
5.1.8	Sample preparation	52
5.2	Rheological investigations – rotational rheometry	57
5.2.1	Principle of rotational rheometer	57
5.2.2	Sample preparation and experimental procedure	58
6	Mechanical behavior of granular α-Al₂O₃	61
6.1	Influence of surface forces on the fabric of fine-grained α -Al ₂ O ₃	61
6.1.1	Surface forces and void ratio	61
6.1.2	Scanning electron microscopy (SEM)	63
6.2	Influence of surface forces – macroscopic observations of rheological behavior	65
6.3	Influence of surface forces on mechanical behavior of Al ₂ O ₃ samples	66
6.3.1	Effect of surface forces on shear modulus	69
6.3.2	Influence of particle size	74
6.3.3	Influence of sample density	74

6.3.4	Exponent of pressure dependency m	76
6.4	Influence of time on mechanical behavior of Al_2O_3	79
6.4.1	Physico-chemical processes at particle contacts	83
6.4.2	Mechanisms influencing the time-dependent mechanical behavior of Al_2O_3 samples	87
6.5	Shear modulus G versus shear strain amplitude γ	92
6.5.1	Influence of particle shear modulus on cyclic threshold shear strain γ_u	93
6.5.2	Influence of pore medium on cyclic threshold shear strain γ_u	96
6.5.3	Influence of effective pressure, void ratio and particle surface forces on cyclic threshold shear strain γ_u	98
6.5.4	Summary cyclic threshold shear strain γ_u	99
6.5.5	Further indicator of nonlinear behavior	100
6.6	Damping in fine-grained Al_2O_3 samples	101
6.6.1	Equivalent viscous damping ratio D versus shear strain amplitude γ 101	
6.6.2	Characterization of damping – frequency independent versus vis- cous damping	102
7	Mechanical behavior of Laponite	107
7.1	Coagulated and dispersed Laponite phases – sedimentation and SEM	107
7.2	Laponite at low ionic concentration	108
7.2.1	Influence of solid concentration and time	109
7.2.2	Influence of solid concentration and shear strain amplitude γ	110
7.2.3	Energy dissipation during cyclic shearing	111
7.3	Laponite at increased ionic concentration	114
7.3.1	Influence of time	114
7.3.2	Influence of shear strain amplitude γ	115
7.3.3	Energy dissipation during cyclic shearing	116

8 Mechanical behavior of natural silt	121
8.1 Influence of effective pressure p'	121
8.1.1 Shear modulus of natural silt	121
8.1.2 Damping in natural silt	125
8.2 Influence of time	125
9 Interpretation and geotechnical application	129
9.1 Metal oxides in geotechnics	129
9.2 Fabric of granular assemblies – formation of quick clay	130
9.3 Time dependency of shear modulus G	131
10 Summary and outlook	133
10.1 Summary	133
10.2 Outlook	135
11 Zusammenfassung und Ausblick	137
11.1 Zusammenfassung	137
11.2 Ausblick	139
Nomenclature	141
Bibliography	147
