

# **Through-Process Modelling of Aluminium as a Tool for the Prediction of Plastic Anisotropy Using Microstructure Models**

Von der Fakultät für Georessourcen und Materialtechnik der  
Rheinisch-Westfälischen Technischen Hochschule Aachen

zur Erlangung des akademischen Grades eines

**Doktors der Ingenieurwissenschaften**

genehmigte Dissertation

vorgelegt von

**Diplom-Ingenieur Luc Neumann**

aus Eupen, Belgien

**Berichter: Univ.-Prof. em. Dr.-Ing. Dr.h.c.mult. Dr.-Ing.E.h. Reiner Kopp  
Univ.-Prof. Dr.rer.nat. Günter Gottstein**

Tag der mündlichen Prüfung: 12. Oktober 2006

# Contents

<b>1. Introduction and objective</b>	<b>1</b>
<b>2. Literature review</b>	<b>3</b>
2.1. Modelling of work hardening	3
2.1.1. Empirical and phenomenological work hardening models	3
2.1.2. Statistical work hardening models based on physics	4
2.1.2.1. One parameter models	5
2.1.2.2. Multiple parameter models	6
2.2. Modelling of texture	10
2.2.1. Full constraints Taylor model	12
2.2.2. Grain Interaction model	12
2.2.3. Static Recrystallisation Texture model	14
2.2.4. Visco-Plastic Self-Consistent model	15
2.3. Modelling of plastic anisotropy	15
2.3.1. Classification of anisotropy models	15
2.3.1.1. Crystal plasticity finite element method	15
2.3.1.2. Phenomenological and texture based yield functions	17
2.3.2. Important properties of yield functions	18
2.3.2.1. Convexity	18
2.3.2.2. Orthotropic coordinate system	18
2.4. Coupling strategies	19
<b>3. Modelling setup for through process modelling</b>	<b>21</b>
3.1. Introductory remarks on the implementation of physical models in process models	22
3.2. Casting and homogenisation	22
3.3. Hot and cold rolling	25
3.3.1. Hardening and softening	25
3.3.2. Texture	25
3.4. Cup drawing	29
3.4.1. Orthotropic viscous flow approach	30
3.4.2. Update of the yield locus	31
3.5. Recursive effects of models	34
3.6. Model parameters	36

<b>4. Validation of the modelling setup</b>	<b>39</b>
4.1. Laboratory scale applications	40
4.1.1. Through process cup production for industrial AA3104 alloy and corresponding simplified lab alloy	40
4.1.1.1. Casting and homogenisation	40
4.1.1.2. Hot and cold rolling	40
4.1.1.3. Annealing and cup drawing	42
4.1.1.4. Cup drawing investigations on ideal textures	48
4.1.2. Rolling of two alloys with different Mg content	56
4.1.2.1. Global results	57
4.1.2.2. Texture results	57
4.1.2.3. Influence of the co-rotational material coordinate system on rolling results	63
4.1.3. Cup drawing of anisotropic AA1200 sheet	65
4.1.3.1. Comparison of T-Pack predictions with established phenomenological yield functions	66
4.1.3.2. Influence of the accumulated plastic strain increment $\varepsilon_{plast}$ on simulation results	74
4.1.4. Equal channel angular pressing	78
4.1.4.1. Experimental setup and results	78
4.1.4.2. General simulation results	80
4.1.4.3. Texture simulation results	83
4.2. Industrial scale applications	86
4.2.1. Industrial hot rolling schedule on AA5182	86
4.3. Influence of boundary conditions	90
4.3.1. Influence of temperature in a tandem mill	90
<b>5. Conclusions</b>	<b>93</b>
5.1. Summary of modelling recommendations	93
5.2. Prospects for future work	93
<b>6. Zusammenfassung</b>	<b>95</b>
<b>A. Experimental data</b>	<b>97</b>
<b>B. T-Pack initialisation file</b>	<b>99</b>
<b>C. Pathline file format</b>	<b>109</b>
C.1. Introduction	109
C.2. Definition	109
C.2.1. Header	109
C.2.2. Body and keywords	110

**Bibliography**
