

# **Fitness-for-Service Fracture Assessment of Structures Containing Cracks**

**A Workbook based on the European  
SINTAP/FITNET Procedure**

**Uwe Zerbst  
Manfred Schödel  
Stephen Webster  
Robert A. Ainsworth**

**ELSEVIER**

**Amsterdam • Boston • Heidelberg • London • New York • Oxford  
Paris • San Diego • San Francisco • Singapore • Sydney • Tokyo**

# Contents

Nomenclature	ix
<b>1. Introduction</b>	<b>1</b>
1.1. SINTAP	1
1.2. FITNET	3
1.3. The Topic of the Present Book	3
<b>2. Brief Overview on the Development of Flaw Assessment</b>	<b>7</b>
2.1. General Aspects	7
2.2. Ligament Yielding	8
2.3. The TWI (The Welding Institute) Design Curve Approach	9
2.4. The Early FAD Approach of CEGB (Central Electricity Generating Board)	10
2.5. The EPRI (Electric Power Research Institute) Approach	11
2.6. The Reference Stress Method of CEGB	12
2.7. The R6-Revision 3 Approach of CEGB	13
2.8. The Engineering Treatment Model (ETM) Approach of GKSS	15
2.9. The SINTAP Approach	16
<b>3. Basic Features of SINTAP/FITNET</b>	<b>19</b>
3.1. Fitness-for-Service	19
3.2. Potential Tasks of a SINTAP/FITNET Analysis	20
3.3. Multi-Optional Concept	21
3.4. FAD versus CDF Analyses	24
3.5. Integrated Concept	25
<b>4. The Input Parameters</b>	<b>29</b>
4.1. Loading Input Parameters	29
4.1.1. General Considerations	29
4.1.2. Primary and Secondary Stresses	29
4.1.3. Definition of the Stress Profile for Use with the K-Factor	30
4.1.4. Definition of the Stress Profile for Yield Load Determination	35
4.2. Flaw Characterisation	36
4.2.1. Planar and Volumetric Flaws	36
4.2.2. Basic Crack Types	36

4.2.3. Crack Shape Idealisation	36
4.2.4. Interaction Effects of Multiple Cracks	38
4.2.5. Crack Re-characterisation	40
4.2.6. Crack Orientation and Projected Crack Depth	41
4.3. Deformation Characteristics of the Material	43
4.3.1. General Remarks	43
4.3.2. Engineering and True Stress-Strain Curve	44
4.3.3. Modulus of Elasticity (Young's Modulus) and Poisson's Ratio	44
4.3.4. Yield Strength and Tensile Strength	45
4.3.5. Flow Stress	46
4.3.6. Strain Hardening Coefficient	46
4.3.7. Yield Strain (Lüders' Strain)	47
4.3.8. Tensile Data Relevant to Welds	48
4.3.9. Temperature and Strain Rate Dependency	50
4.4. Toughness Characteristics of the Material	50
4.4.1. General Remarks	50
4.4.2. The Fracture Toughness Transition Curve	51
4.4.3. Lower Shelf Fracture Toughness	53
4.4.4. Upper Shelf Fracture Toughness	54
4.4.5. Ductile-to-Brittle Transition	56
4.4.6. Constraint Dependency of Fracture Toughness	74
4.4.7. Reference Toughness Based on Charpy Data	85
<b>5. The Model Parameters</b>	<b>89</b>
5.1. The Stress Intensity Factor (K-Factor)	89
5.1.1. Sources for Analytical K-Factor Solutions	89
5.1.2. Types of Analytical K-Factor Solutions	90
5.1.3. Superposition of K-Factors	110
5.1.4. Treatment of Geometry Factor Solutions Available in Table Format	110
5.1.5. Individual Determination of K-Factors by Finite Element or Comparable Methods	111
5.2. Net Section Yield Load $F_Y$ , Reference Stress $\sigma_{ref}$ and Ligament Yielding $L_t$	112
5.2.1. Methods for the Generation of Yield Load Solutions	112
5.2.2. Global vs. Local Yield Load	113
5.2.3. Conservatism in Yield Load Determination	114
5.2.4. Sources for Analytical Yield Load Solutions	115
5.2.5. Types of Analytical Yield Load Solutions for Homogenous Components	116
5.2.6. Equivalent Yield Load Solutions for Strength Mismatch Components	129

<b>6. Structural Assessment</b>	<b>137</b>
6.1. Acceptable or Critical Conditions of a Component	137
6.2. Assessment Based on the FAD Philosophy	139
6.2.1. The FAD	139
6.2.2. The Assessment Point (or Path)	139
6.2.3. Types of FAD Analysis	141
6.2.4. Non-unique Solutions	142
6.3. Assessment Based on the CDF Philosophy	143
6.3.1. The CDF Functions	143
6.3.2. The Determination of the Critical Condition	144
6.4. The $f(L_r)$ Function According to the Different Analysis Levels	147
6.4.1. General Remarks	147
6.4.2. Option 0 (“Basic Option”)	147
6.4.3. Option 1 (“Standard Option”)	148
6.4.4. Option 3 (“Stress–Strain Defined Option”)	151
6.5. Examples for SINTAP/FITNET Analysis	153
6.5.1. Determination of the Critical Load	153
6.5.2. Determination of the Critical Crack Size	157
6.5.3. Determination of the Required Minimum Toughness	158
6.5.4. Determination of the Instability Load (R-Curve Analysis)	159
6.6. Combined Primary and Secondary Stresses	162
6.6.1. General Remarks	162
6.6.2. The Correction Term V in the FAD and CDF Approaches	163
6.6.3. The Determination of V	164
6.6.4. Welding Residual Stress Profiles	165
6.6.5. Examples of Analysis for Combined Primary and Secondary Stresses	172
6.6.6. Further Remarks on Welding Residual Stress Profiles	185
6.7. Constraint Effects	188
6.7.1. Consideration in the FAD and CDF Approaches	188
6.7.2. Example of an Assessment Including Constraint Effects	188
6.8. Mixed Mode Loading	191
6.8.1. General Aspects	191
6.8.2. FAD Analysis	193
6.8.3. CDF Analysis	194
6.9. Rapid Loading and Crack Arrest	194
6.9.1. General Aspects	194
6.9.2. Quasi-Static vs. Dynamic Analysis	196
6.9.3. Crack Arrest	197
6.10. Thin Wall Structures	198
6.10.1. General Aspects	198

6.10.2. Thin Wall Assessment Module	200
6.10.3. Examples of Thin Wall Assessments	202
6.11. Strength Mismatch	208
6.11.1. The Strength Mismatch Phenomenon	208
6.11.2. The Strength Mismatch Options	210
6.11.3. Examples of Option 2 Analysis	214
6.11.4. The Option 3 Mismatch Module	219
6.11.5. Further Aspects of Strength Mismatch	220
6.12. Weld Shape Imperfections	224
6.12.1. Weldment Specific K-Solutions	224
6.12.2. Misalignment	225
6.12.3. Example of an Assessment Taking into Account Misalignment	226
6.13. Reliability Aspects and Significance of the Results	229
6.13.1. General Aspects	229
6.13.2. Reserve Factors and Sensitivity Analysis	230
6.13.3. Reliability Analysis	230
6.13.4. Example of a Simplified Reliability Analysis	231
6.13.5. Partial Safety Factors	235
6.14. Potential Benefit of Applying Advanced Options and Modules	238
<b>7. Validation Examples</b>	<b>241</b>
7.1. Introduction	241
7.2. Pipelines and Pressurised Tubes	241
7.3. Thin Wall Structures	244
7.4. Strength Mismatched Configurations	247
7.5. Failure Investigation	248
