

Dietmar Findeisen

System Dynamics and Mechanical Vibrations

An Introduction

With 89 Figures

Springer

Contents

Index of Formula Symbols	XI
1 Theory of Dynamic Systems	1
1.1 Definitions and Overview of Systems Modelling	1
1.2 General Classification of Dynamic System Variables	4
1.2.1 Classification in Terms of Spatial Relationships	4
1.2.2 Classification in Terms of Local Energy State	5
2 System Representation by Diagrams (Model System)	9
2.1 Block-diagram and Signal-flow-diagram Representation	9
2.1.1 Transfer Function Block Diagram	10
2.1.2 Control System Structure	12
2.1.3 Control System Design. <i>Fundamental Aspects</i>	13
2.1.4 Signal Flow Graphs. <i>Reduction of the Diagram</i>	18
2.2 Two-port-diagram Representation	20
2.2.1 Generic Two Port. <i>Two-terminal-pair Network</i>	20
2.2.2 Connection of Two Ports. <i>Fundamental Configurations</i>	22
2.2.3 Mechanical Two Ports	25
2.2.4 Fundamental Mechanical Elements. <i>Fundamental Configurations</i>	28
2.2.5 Supplementary Mechanical Elements. <i>Couplers and Sources</i>	32
2.2.6 Connections with Block Diagrams. <i>Transfer Function Block Diagrams</i>	39
2.2.7 Analysis of Complex System Structures. <i>Fluid System</i>	46
2.3 Network-diagram Representation (Circuit Diagram)	48
2.3.1 Direct Representation of Simple Systems by Networks	49
2.3.2 Fundamental and Supplementary Mechanical Elements	50
2.3.3 Construction of Mechanical Network Diagram. <i>Mechanical Circuit</i>	53
2.3.4 Derivation of Mechanical Network Equations. <i>Equation of Motion</i>	54
2.3.5 Connections with Signal-flow Diagrams. <i>Oriented Linear Graphs</i>	56
2.4 Combined-flow-diagram Representation	58
2.4.1 Symbolic Measurement of Dynamic System Variables	59
2.4.2 Symbolic Regulation of Supplementary Elements. <i>Couplers and Controlled Sources</i>	59

2.4.3	Connections between Network and Block Diagrams. <i>Mixed Domain System Structures</i>	60
2.5	Bond-graph Representation (Multiports)	63
2.5.1	Classification of Multiports	65
2.5.2	Conventions for Interconnected Multiports. <i>Augmented Bond Graphs</i>	66
2.5.3	Fundamental Interconnective Relationships. <i>Generalized Kirchoff's Laws</i>	66
2.5.4	Construction of Mechanical Bond Graph. <i>Mechanical Multiport</i>	68
2.6	Comparison of Diagram Representations (References to Applications)	69
2.6.1	Schematic Diagrams. <i>Visually Descriptive Diagrams</i>	70
2.6.2	Systematic Diagrams. <i>Interconnection Diagrams</i>	71
3	System Representation by Equations (Mathematical Model)	74
3.1	Representation of Mechanical Systems by Differential Equations of Motion (Classical Method)	74
3.1.1	System Specifications by Normalization of the Differential Equation. <i>Time-response Analysis</i>	75
3.1.2	Free and Forced Response of Damped Second-order Systems.....	77
3.1.3	Forced Response of a Single Degree-of-freedom System to Complex Excitation. <i>Phasor-response Analysis</i>	89
3.2	Representation of Mechanical Systems by Integral-transformed Models (Transform Methods)	95
3.2.1	Periodic Vibration. <i>Fourier Series Analysis</i>	96
3.2.2	Non-periodic Vibration. <i>The Fourier Integral</i>	101
3.2.3	Fourier Transform Method. <i>Frequency-response Analysis</i> ..	106
3.2.4	System Response to Transient Excitation. <i>Pulse-type Functions</i>	116
3.2.5	Random Vibration. <i>Data Processing</i>	125
3.2.6	System Response to Random Excitation. <i>White Noise</i>	133
3.2.7	Transient Vibration. <i>The Laplace Integral</i>	139
3.2.8	Laplace Transform Method. <i>Transfer-function Analysis</i>	143
3.2.9	System Response to Transient Excitation. <i>Step-type Functions</i>	154
3.2.10	The Graphical Interpretation of the Transfer Function. <i>Conformal Mapping</i>	166
3.2.11	The Graphical Interpretation of the Frequency-response Function. <i>Frequency Response Plots</i>	176
3.3	Comparison of Fourier and Laplace Transform Methods (References to Applications)	194
3.3.1	Fourier Transform Method. <i>Advantages and Disadvantages</i> ..	194
3.3.2	Laplace Transform Method. <i>Advantages and Disadvantages</i> ..	196

4	Transform Analysis Methods of Vibratory Systems (Frequency-response Characteristics)	198
4.1	Formulation of Dynamic Equations (Equations of Motion)	198
4.1.1	Analytical Dynamics. <i>Mathematical System by Analytical Methods</i>	199
4.1.2	Synthetical Dynamics. <i>Mathematical System by Synthetical Methods</i>	200
4.2	Frequency-response Characteristics (Concepts of Mobility and Dynamic Compliance)	207
4.2.1	Equivalent Definitions of Frequency-response Function....	207
4.2.2	Dynamic Characteristics of Mechanical Elements. <i>Component Mobilities and Dynamic Compliances</i>	212
4.2.3	Dynamic Characteristics of Composite Systems. <i>Overall Mobility and Dynamic Compliance</i>	217
4.2.4	General Transform Analysis Principles. <i>Mechanical Circuit Theorems</i>	231
4.2.5	Graphical Methods to Mechanical System Design. <i>Selecting Vibratory Specifications by Polar Diagrams</i>	237
4.2.6	Some Exercises in Transform Analysis Methods. <i>Applying Dynamic Compliance Techniques</i>	249
5	The Flow of Power and Energy in Systems (Energy Transactions) ...	257
5.1	Power Transmission through Linear Two Ports (Generalized Transport Process).....	262
5.1.1	The Transmission Problem of Two-port Networks. <i>Unrestricted Terminal Conditions</i>	263
5.1.2	The Transmission Problem related to Complex Power. <i>Generalized Quadratic Forms</i>	265
5.1.3	The Power Transmission Factor. <i>Generalized Transmission Ratio</i>	270
5.2	Power Transmission through Mechanical Networks (Generalized Impedance)	281
5.2.1	The Transmission Problem of One-port Networks. <i>Functional Relationships</i>	281
5.2.2	The Transmission Problem related to Complex Power. <i>Phasor Power</i>	283
5.2.3	Connections with Frequency-response Characteristics. <i>Combining Dynamic Compliance and Phasor Power Concepts</i>	297
Appendix A		
	Time-history Curves (Displacement Response and Force Excitation)	317
Appendix B		
	Frequency Response Plots (Normalized Dynamic Compliance and related Characteristics)	343

Appendix C	
Frequency Response Plots of Power (Normalized Complex Power)....	361
References	369
Index	375
