CONTENTS

Preface	ix
Preface to <i>A First Course</i>	xii
Preface to First Edition	xv
Contents of <i>A First Course</i>	xvii

Chapter 10

ALGEBRAIC METHODS IN MARKOV CHAINS

1. Preliminaries	1
2. Relations of Eigenvalues and Recurrence Classes	3
3. Periodic Classes	6
4. Special Computational Methods in Markov Chains	10
5. Examples	14
6. Applications to Coin Tossing	18
Elementary Problems	23
Problems	25
Notes	30
References	30

Chapter 11

RATIO THEOREMS OF TRANSITION PROBABILITIES AND APPLICATIONS

1. Taboo Probabilities	31
2. Ratio Theorems	33

3. Existence of Generalized Stationary Distributions	37
4. Interpretation of Generalized Stationary Distributions	42
5. Regular, Superregular, and Subregular Sequences for Markov Chains	44
6. Stopping Rule Problems	50
Elementary Problems	65
Problems	65
Notes	70
References	71

Chapter 12

SUMS OF INDEPENDENT RANDOM VARIABLES AS A MARKOV CHAIN

1. Recurrence Properties of Sums of Independent Random Variables	72
2. Local Limit Theorems	76
3. Right Regular Sequences for the Markov Chain $\{S_n\}$	83
4. The Discrete Renewal Theorem	93
Elementary Problems	95
Problems	96
Notes	99
References	99

Chapter 13

ORDER STATISTICS, POISSON PROCESSES, AND APPLICATIONS

1. Order Statistics and Their Relation to Poisson Processes	100
2. The Ballot Problem	107
3. Empirical Distribution Functions and Order Statistics	113
4. Some Limit Distributions for Empirical Distribution Functions	119
Elementary Problems	124
Problems	125
Notes	137
References	137

Chapter 14

CONTINUOUS TIME MARKOV CHAINS

1. Differentiability Properties of Transition Probabilities	138
2. Conservative Processes and the Forward and Backward Differential Equations	143
3. Construction of a Continuous Time Markov Chain from Its Infinitesimal Parameters	145

4. Strong Markov Property	149
Problems	152
Notes	156
References	156

Chapter 15

DIFFUSION PROCESSES

1. General Description	157
2. Examples of Diffusion	169
3. Differential Equations Associated with Certain Functionals	191
4. Some Concrete Cases of the Functional Calculations	205
5. The Nature of Backward and Forward Equations and Calculation of Stationary Measures	213
6. Boundary Classification for Regular Diffusion Processes	226
7. Some Further Characterization of Boundary Behavior	242
8. Some Constructions of Boundary Behavior of Diffusion Processes	251
9. Conditioned Diffusion Processes	261
10. Some Natural Diffusion Models with Killing	272
11. Semigroup Formulation of Continuous Time Markov Processes	285
12. Further Topics in the Semigroup Theory of Markov Processes and Applications to Diffusions	305
13. The Spectral Representation of the Transition Density for a Diffusion	330
14. The Concept of Stochastic Differential Equations	340
15. Some Stochastic Differential Equation Models	358
16. A Preview of Stochastic Differential Equations and Stochastic Integrals	368
Elementary Problems	377
Problems	382
Notes	395
References	395

Chapter 16

COMPOUNDING STOCHASTIC PROCESSES

1. Multidimensional Homogeneous Poisson Processes	398
2. An Application of Multidimensional Poisson Processes to Astronomy	404
3. Immigration and Population Growth	405
4. Stochastic Models of Mutation and Growth	408
5. One-Dimensional Geometric Population Growth	413
6. Stochastic Population Growth Model in Space and Time	416
7. Deterministic Population Growth with Age Distribution	419
8. A Discrete Aging Model	425

9. Compound Poisson Processes	426
Elementary Problems	441
Problems	441
Notes	450
References	450

Chapter 17

FLUCTUATION THEORY OF PARTIAL SUMS OF INDEPENDENT IDENTICALLY DISTRIBUTED RANDOM VARIABLES

1. The Stochastic Process of Partial Sums	451
2. An Equivalence Principle	453
3. Some Fundamental Identities of Fluctuation Theory and Direct Applications	459
4. The Important Concept of Ladder Random Variables	464
5. Proof of the Main Fluctuation Theory Identities	468
6. More Applications of Fluctuation Theory	473
Problems	484
Notes	488
References	488

Chapter 18

QUEUEING PROCESSES

1. General Description	489
2. The Simplest Queueing Processes (M/M/1)	490
3. Some General One-Server Queueing Models	492
4. Embedded Markov Chain Method Applied to the Queueing Model (M/GI/1)	497
5. Exponential Service Times (G/M/1)	504
6. Gamma Arrival Distribution and Generalizations ($E_k/M/1$)	506
7. Exponential Service with s Servers (GI/M/ s)	511
8. The Virtual Waiting Time and the Busy Period	513
Problems	519
Notes	525
References	525
