

Tribology in Particulate Technology

Edited by
B J Briscoe

Department of Chemical Engineering,
Imperial College, London

and

M J Adams

Unilever Research, Port Sunlight
Laboratory, The Wirral

Adam Hilger, Bristol and Philadelphia

Contents

List of Contributors	xiii
Preface	xix
Part 1: Friction in Powder Flows	1
Introductory Remarks 1	3
1.1 A Contact Mechanics Approach to the Prediction of the Wall Friction of Powders <i>M J Adams, B J Briscoe and L Pope</i>	8
1.1.1 Introduction	8
1.1.2 The friction of smooth particles	9
1.1.3 The friction of rough particles	12
1.1.4 The interfacial sliding of particle assemblies	17
1.1.5 Conclusions	21
1.2 The Modelling of Asperity Contacts <i>R S Sayles and D M Bailey</i>	23
1.2.1 Introduction	23
1.2.2 Numerical contact methods	25
1.2.3 Comparison of numerical and random-process models	26
1.2.4 Elastic-plastic three-body contact	30
1.2.5 Conclusions	36
1.3 Effects of Consolidation and Yield History on the Measured Angles of Friction of Particulate Solids <i>U Tüzün</i>	38
1.3.1 Introduction	38

1.3.2	Empirical measurements of coefficients of friction	39
1.3.3	Angles of friction of cohesionless materials	42
1.3.4	Angles of friction of cohesive materials	47
1.3.5	Dynamic friction angles and theoretical coupling of stress and velocity fields	53
1.3.6	Conclusions	58
1.4	The Role of Particle Interactions in High Strain Rate, Dense-phase Flow <i>P C Knight</i>	63
1.4.1	Introduction	63
1.4.2	Bagnold's work on high strain rate flow	65
1.4.3	Recent theoretical developments	67
1.4.4	Chute flow investigations	72
1.4.5	Conclusions	77
1.5	The Role of Frictional Forces in Paste Extrusion <i>J J Benbow and J Bridgwater</i>	80
1.5.1	Introduction	80
1.5.2	Screw or auger extruders	82
1.5.3	Extrusion through the die-land	84
1.5.4	Experimental	85
1.5.5	Ram method	87
1.5.6	Discussion of results	89
1.6	Interparticle Friction in Slurries <i>K Kendall</i>	91
1.6.1	Introduction	91
1.6.2	Theory of slurry behaviour	94
1.6.3	Plastimeter test	95
1.6.4	Extrusion test	97
1.6.5	Bubble collapse test	99
1.6.6	Conclusions	101
	Concluding Remarks 1	103
	Part 2: Adhesive Forces in Powder Flow	105
	Introductory Remarks 2	107
2.1	Relevance of Contact Mechanics to Powders—Elasticity, Friction and Agglomerate Strength <i>K Kendall</i>	110
2.1.1	Introduction	110
2.1.2	Historical	112
2.1.3	The JKR model	114

2.1.4	Application to particle assemblies	115
2.1.5	Conclusions	120
2.2	Impact Adhesion of Particles <i>J Reed</i>	123
2.2.1	Introduction	123
2.2.2	The impact adhesion model	124
2.2.3	Discussion	130
2.3	Electrostatic Effects in the Adhesion of Particles to Solid Surfaces <i>W Balachandran</i>	135
2.3.1	Introduction	136
2.3.2	Electrostatic adhesion mechanisms	138
2.3.3	Measurement of electrostatic adhesive forces	147
2.3.4	Conclusions	152
2.4	Forces between Particles in Continuous and Discrete Liquid Media <i>M J Adams and B Edmondson</i>	154
2.4.1	Introduction	154
2.4.2	The influence of liquids on autoadhesion	157
2.4.3	The viscous force	159
2.4.4	Capillary forces	165
2.4.5	Summary	169
2.5	Particle Cohesion in Gas/Solid Fluidisation <i>J P K Seville</i>	173
2.5.1	Type of fluidisation behaviour	173
2.5.2	Fluidisation in the presence of interparticle adhesive forces	176
2.5.3	Criteria for the transitions in fluidisation behaviour	185
2.5.4	Conclusions	188
2.6	The Influence of Particle Adhesion on Powder Mixing <i>N Harnby</i>	191
2.6.1	Introduction	191
2.6.2	The effect of moisture on mixedness	193
2.6.3	Bulk density and the Hausner ratio	195
2.6.4	Conclusions	198
	Concluding Remarks 2	200
	Part 3: Powder Compaction and Interface Shear	201
	Introductory Remarks 3	203

3.1	Adhesion of Solids	206
	<i>D Tabor</i>	
3.1.1	Introduction	207
3.1.2	The adhesion of soft elastic solids (e.g. rubber)	209
3.1.3	Factors affecting the magnitude of the pull-off force	210
3.1.4	Adhesion of clean hard solids	212
3.1.5	Effect of ductility	216
3.1.6	Conclusions	217
3.2	The Role of Interface Friction in the Compaction of Maize	220
	<i>B J Briscoe, M S D Fernando and A C Smith</i>	
3.2.1	Introduction	220
3.2.2	Theory	221
3.2.3	Experimental method	226
3.2.4	Results and discussion	228
3.2.5	Conclusions	232
3.3	Die Wall Friction Effects in the Compaction of Polymer Granules	234
	<i>D P Isherwood</i>	
3.3.1	Introduction	234
3.3.2	Experiment	235
3.3.3	Simple theoretical treatments of the effects of friction	239
3.3.4	Pressure distributions in compacts	242
3.3.5	True compaction curves—power law relationships	244
3.3.6	Discussion and conclusions	246
3.4	Uniaxial Powder Compaction	249
	<i>N G Stanley-Wood</i>	
3.4.1	Introduction	249
3.4.2	Mohr stress and particulate yield criterion	251
3.4.3	Uniaxial compaction stress pathways	252
3.4.4	Roscoe and Hvorslev surfaces	256
3.4.5	Critical state line and uniaxial compaction	257
3.4.6	Physico-chemical characterisation of uniaxially compacted material	259
3.4.7	Physico-mechanical characterisation of uniaxially compacted material	264
3.4.8	Direct measurements of shear failure and surface area in compacts	269
3.4.9	Conclusions	271
3.5	Tribological Consequences of Compaction and Interface Shear of Micronised Powders	273
	<i>T Mathia and F Louis</i>	
3.5.1	Introduction	274

3.5.2	Powders, what are they in tribology?	276
3.5.3	Rheological properties of some tribological powders	279
3.5.4	Tribological behaviour of lubricant and abrasive powders	284
3.5.5	Conclusions	288
3.6	Computer-Simulated Experiments on Particulate Materials <i>C Thornton</i>	292
3.6.1	Introduction	292
3.6.2	The simulation model	294
3.6.3	Test simulation procedures	295
3.6.4	Macromechanical behaviour	295
3.6.5	Micromechanical behaviour	298
3.6.6	Stress–structure relationships	300
3.6.7	Concluding remarks	301
3.7	Explosive Compaction of Non-Metallic Powder Mixtures <i>T Z Blazynski</i>	303
3.7.1	Introduction	303
3.7.2	Characteristics of explosively compacted particulate matter	304
3.7.3	Compaction of polymeric powders	306
3.7.4	Compaction of PVC/metallic, PVC/ceramic mixtures	312
3.7.5	Conclusions	312
	Concluding Remarks 3	316
	Part 4: Attrition and Wear	317
	Introductory Remarks 4	319
4.1	Abrasive Wear <i>J K Lancaster</i>	321
4.1.1	Introduction	321
4.1.2	Metals	322
4.1.3	Polymers	324
4.1.4	Ceramics	328
4.1.5	Rubbers	329
4.1.6	Summary	332
4.2	The Wear of Polymers by Particle Flows <i>B J Briscoe and P D Evans</i>	335
4.2.1	Introduction	335
4.2.2	Experimental details	337
4.2.3	Results and specific discussions	338
4.2.4	General conclusions	348

4.3	Wear at Hopper Walls	351
	<i>G D Corder and R B Thorpe</i>	
4.3.1	Introduction	352
4.3.2	Background on abrasive wear	353
4.3.3	Prediction of wear rate at hopper walls	354
4.3.4	Aerated flow of granular materials through orifices	357
4.3.5	Experimental work	360
4.3.6	Further work and conclusions	362
4.4	Attrition of Bulk Particulate Solids	364
	<i>J Bridgwater</i>	
4.4.1	Mechanisms of attrition	364
4.4.2	Motion of particulate solids	365
4.4.3	Modelling of failure zones	367
4.4.4	Attrition kinetics	369
4.4.5	General literature	371
4.4.6	The future	372
4.5	Agglomeration	375
	<i>M J Adams, M A Mullier and J P K Seville</i>	
4.5.1	Introduction	375
4.5.2	The mechanical properties of agglomerates	378
4.6	Wear and Attrition in Pneumatic Conveying	390
	<i>D Mills</i>	
4.6.1	Introduction	390
4.6.2	Product degradation	391
4.6.3	Plant erosion	393
4.6.4	Mode of flow	397
4.6.5	Control of variables	399
4.6.6	Bend erosion	400
4.7	Surface Impact Damage	406
	<i>I M Hutchings</i>	
4.7.1	Introduction	406
4.7.2	Locations of erosive wear	407
4.7.3	Mechanisms of erosion	409
4.8	Liquid Impact and Cavitation Erosion Processes	416
	<i>J E Field</i>	
4.8.1	Introduction	416
4.8.2	Liquid impact	417
4.8.3	Cavitation erosion	431

<i>Contents</i>	xi
4.9 Impact Attrition of NaCl Particles <i>M Ghadiri and K R Yüregir</i>	439
4.9.1 Introduction	439
4.9.2 Impact fracture analysis	440
4.9.3 Damage observations	441
4.9.4 Discussion and conclusions	447
Concluding Remarks 4	453
Appendix 1	454
Appendix 2	455
Appendix 3	455
Appendix 4	456
The End of the Day	458
