Power Cables and their Application

Part 1
Materials · Construction
Criteria for Selection
Project Planning
Laying and Installation · Accessories
Measuring and Testing

Editor: Lothar Heinhold

3rd revised edition, 1990

Contents

Constructional Elements of Insulated Cables

1 Conductors ........................................... 11
  1.1 Wiring Cables and Flexible Cables ............. 12
  1.2 Power Cables ..................................... 13

2 Insulation ............................................. 15
  2.1 Polymers .......................................... 15
    2.1.1 Thermoplastics (Plastomers) ............... 17
           Copolymers • Fluoroplastics • Polyvinyl
           Chloride (PVC) • Polyethylene (PE) •
           Cross-Linked Polyethylene (XLPE)
    2.1.2 Elastomers .................................. 23
           Thermoplastic Elastomers (TPE) • Con-
           ducting Rubber • Natural Rubber (NR) •
           Styrene Butadiene Rubber (SBR) • Nitrile
           Butadiene Rubber (NBR) • Butyl Rubber
           (IIR) • Ethylene-Propylene Rubber (EPR) •
           Silicone Rubber (SiR) • Ethylene Vinyl
           Acetate (EVA)
    2.1.3 Thermosetting Polymers (Duromers) ......... 26
  2.2 Chemical Aging of Polymers ..................... 27
  2.3 The Influence of Moisture on Polyolefine
      Insulating Materials ............................. 30
  2.4 Impregnated Paper ................................ 35
  2.5 Literature Referred to in Section 2 ............. 35

3 Protective Sheaths .................................. 37
  3.1 Thermoplastic Sheaths ............................ 37
  3.2 Elastomer Sheaths ................................ 38
  3.3 Sheathing Materials for Special Purposes ... 39
  3.4 Metal Sheath ...................................... 39

4 Protection against Corrosion ....................... 41
  4.1 Cable with Lead Sheath ........................... 41
  4.2 Aluminium-Sheathed Cables ....................... 42

5 Armour ................................................ 43

6 Concentric Conductors ............................... 44

7 Electrical Screening .................................. 45
  7.1 Conducting Layers ................................ 45
  7.2 Metallic Components of Electrical Screening .... 46
  7.3 Longitudinally Water Proof Screens .............. 47

Insulated Wires and Flexible Cables

8 Types of Wires and Cables ......................... 49
  8.1 National and International Standards ............ 49
    8.1.1 VDE Specifications .......................... 49
    8.1.2 Harmonized Standards ....................... 49
    8.1.3 National Types ................................ 54
    8.1.4 IEC Standards ................................ 55
  8.2 Selection of Flexible Cables ...................... 55
    8.2.1 Cables for Fixed Installations .............. 56
    8.2.2 Flexible Cables .............................. 62
    8.2.3 FLEXO Cords ................................ 74
  8.3 Flexible Cables for Mining and Industry ......... 75
    8.4 Halogen-Free SIENOPYR Wiring and Flexible
           Cables with Improved Performance in the
           Event of Fire .................................. 79

9 Core Identification of Cables ....................... 82

10 Definition of Locations to DIN VDE 0100 ........... 84

11 Application and Installation of Cables ........... 86
    11.1 Rated Voltage, Operating Voltage .............. 88
    11.2 Selection of Conductor Cross-Sectional Area .... 89

Power Cables

12 National and International Standards .......... 93
    12.1 VDE Specifications ............................ 93
    12.2 Standards of Other Countries ................. 94
    12.3 IEC and CENELEC Standards .................. 94

13 Types of Construction of Low- and High-Voltage
      Cables ........................................... 97
    13.1 General ......................................... 97
    13.2 Type Designation ................................ 100
    13.3 Selection of Cables and Accessories ........... 102

14 Power Cables for Special Applications .......... 124
    14.1 Cable with Elastomer Insulation ............... 124
    14.2 Shipboard Power Cable ........................ 124
    14.2.1 Construction and Characteristics ........... 124
27.3.3 Low-Voltage Systems 368
System Configuration and Types of Operation in the Public Supply Extension of a Low-Voltage System Systems of Buildings-Industrial Supply Systems Location of Substations Component Parts of the Low-Voltage System

27.3.4 Medium-Voltage Systems 375

27.4 System Calculation 381
27.4.1 Basics 381
27.4.2 Calculation of a Low-Voltage System 383
27.4.3 Investigations of Protective Measures Against Excessive Touch Voltage 385
27.4.4 Investigation of Short-Circuit Protection and Discrimination 389
27.4.5 Computer-Aided System Calculation 392
27.5 Literature Referred to in Section 27 393

Laying and Installation

28 Cable Identification Marking 395
28.1 Manufacturers, VDE-Marking 395
28.2 Colours of Outer Sheaths and Protective Coverings 395
28.3 Core Identification for Power Cables up to \( U_0/U = 0.6/1 \text{kV} \) 397
28.4 Core Identification for Cables for Rated Voltages Exceeding \( U_0/U = 0.6/1 \text{kV} \) 398

29 Laying the Cables 399
29.1 Transporting 399
29.2 Preparation for Laying the Cable 400
29.3 Differences in Level of the Cable Route 401
29.4 Laying of Cables in the Ground 401
29.4.1 Cable Route 401
29.4.2 Laying of the Cables 403
29.5 Laying of Cables Indoors 408
29.5.1 Cables on Walls, Ceilings or Racks 408
29.5.2 Cable Tunnels and Ducts 408
29.6 Cable Clamps 410
29.6.1 Types of Clamps 411
29.6.2 Arrangements and Dimensions 412

30 Installation Guide 415
30.1 Preparation of Cable Ends 415

30.2 Earthing of Metallic Sheaths and Coverings 416
30.3 Conductor Jointing 418

31 Repair of Damage to Outer Sheath 420
31.1 Outer Sheath of Polyvinylchloride (PVC) and Polyethylene (PE) 420
31.2 Jute Servings on Cables with Lead Sheath 423

32 Cable Accessories 424
32.1 Fundamental Objectives 424
32.2 Requirements 424
32.3 Stress Control 426
32.4 Fundamental Principles for the Construction and Installation of Accessories 427
32.4.1 Compound Filling Technique 427
32.4.2 Cast-Resin Techniques 429
32.4.3 Shrink-On Technique 433
32.4.4 Lapping Technique 434
32.4.5 Push-On Technique 435
32.4.6 Plug Technique 437
32.5 Literature Referred to in Section 32 437

33 Cable Plan 438

Measuring and Testing of Power Installations

34 Electrical Measurements in the Cable Installation, as Installed 439

35 Voltage Tests 440
35.1 General 440
35.2 Testing with d.c. Voltage 440
35.3 Testing with a.c. Voltage 442

36 Locating Faults 443
36.1 Preliminary Measurements 443
36.2 Location Measurements by the Conventional Method 444
36.3 Locating of Faults by Pulse Reflection Method 447
36.4 Preparation of Fault Point by Burn-Through 449
36.5 Locating Using Audio Frequency 450
36.6 Testing of Thermoplastic Sheaths 452

37 Construction and Resistance of Conductors 454

38 Conversion Table 457

Index 458
