Nonequilibrium Phenomena in Polyatomic Gases

VOLUME 1
DILUTE GASES

Frederick R. W. McCourt
Professor in the Departments of Chemistry and Applied Mathematics
University of Waterloo

Jan J. M. Beenakker
Professor in the Department of Physics
University of Leiden

Walter E. Köhler
Senior Scientist, Siemens Research Laboratories, Erlangen

and

Ivan Kuščer
Professor in the Department of Physics
University of Ljubljana

CLARENDON PRESS • OXFORD
1990

7. EFFECT OF FIELDS ON TRANSPORT PHENOMENA 313
7.1 Momentum transport: viscous flow in an external field 313
   7.1.1 Viscomagnetic effects in gases of linear molecules 321
   7.1.2 Viscomagnetic effects in binary mixtures 325
   7.1.3 Simplified theory of viscomagnetic effects in paramagnetic gases 326
   7.1.4 Viscomagnetic effects in symmetric top molecular gases 330
   7.1.5 Viscoelectric effects in polar gases 332
   7.1.6 Measurement of longitudinal viscomagnetic effects 333
   7.1.7 Measurement of transverse viscomagnetic effects 336
   7.1.8 Measurement of viscoelectric effects 337
   7.1.9 Measurement of volume viscosity and cross effect coefficients 338
   7.1.10 Features of viscomagnetic effects and their analysis 339
7.2 Field-effects in energy and particle transport 345
   7.2.1 Thermomagnetic effects in gases of linear molecules 345
   7.2.2 Thermomagnetic effects in binary mixtures 348
   7.2.3 Extension of the theory to polar gases 354
   7.2.4 Exact treatment of the leading polarization in heat and particle flow 355
   7.2.5 Measurement of longitudinal thermomagnetic effects 359
   7.2.6 Measurement of longitudinal thermolectric effects 361
   7.2.7 Measurement of transverse thermomagnetic effects 366
   7.2.8 Features of thermomagnetic effects and their analysis 366
   7.2.9 Features of thermolectric effects and their analysis 371
   7.2.10 Thermal diffusion field-effects 374
   7.2.11 The Dufour effect 380
   7.2.12 Diffusion field-effects 383
   7.2.13 Conclusions on polarizations
8. ANOMALOUS FIELD-EFFECTS

8.1 The coupling of spin and rotational angular momenta
8.2 The basis for anomalous field-effects
8.3 Senftleben effects in paramagnetic gases
  8.3.1 Senftleben effects in NO$_2$
  8.3.2 Senftleben effects in O$_2$
8.4 Nuclear spin-decoupling effects in HD
  8.4.1 Calculated shear viscosity effects in HD
  8.4.2 Comparison with experiment
8.5 Anomalous electric field-effects

References

9. OBSERVABLE NONEQUILIBRIUM POLARIZATIONS

9.1 Phenomenological description
9.2 Kinetic theory of nonequilibrium polarizations
9.3 Flow birefringence
  9.3.1 Theory for a gas of linear molecules
  9.3.2 Extension to symmetric top molecular gases
  9.3.3 The experimental method
  9.3.4 Experimental results
  9.3.5 The scalar factor in O$_2$
9.4 Correlations in velocity-angular momentum spaces
  9.4.1 Experimental observation of the Kagan polarization

10. LIGHT SCATTERING

10.1 Light scattering by molecular gases: general theory
  10.1.1 The reduced spectral intensity
  10.1.2 Spectral functions
  10.1.3 Mean square fluctuations
  10.1.4 Average time evolution of fluctuations
10.2 The Rayleigh–Brillouin spectrum
10.3 Depolarized Rayleigh (DPR) light scattering
  10.3.1 High-density binary collision regime: Lorentzian limit
  10.3.2 Collisional and diffusional broadening: Lorentzian limit
  10.3.3 Non-Lorentzian description of the DPR spectrum
  10.3.4 Measurement of the DPR spectrum
  10.3.5 Interpretation of the DPR spectrum
  10.3.6 Multilevel description of DPR light scattering
  10.3.7 DPR scattering in binary mixtures
10.4 Rotational Raman scattering
10.4.1 Theory of rotational Raman scattering 490
10.4.2 Measurement and analysis of rotational Raman lines 492
