Contents

<i>Preface to the first edition</i>	<i>XIII</i>
<i>Preface to the second edition</i>	<i>XV</i>
<i>Preface to the third edition</i>	<i>XVI</i>
<i>Preface to the fourth edition</i>	<i>XVII</i>

Part I PRINCIPLES

Chapter 1

Summary of basic problems and concepts	3
1.1 Introduction	3
1.2 A crack in a structure	6
1.3 The stress at a crack tip	8
1.4 The stress intensity as a similitude parameter	12
1.5 An additional similitude parameter	15
1.6 Examples	19
1.7 The Griffith criterion	22
1.8 The crack opening displacement criterion	24
1.9 Subcritical crack propagation	25
1.10 Types of analysis	29

Chapter 2

Mechanisms of fracture and crack growth	33
2.1 Introduction	33
2.2 Cleavage fracture	40
2.3 Ductile fracture	47

2.4	Fatigue cracking	57
2.5	Environment assisted cracking	68
2.6	Service failure analysis	71

Chapter 3

	The elastic crack-tip stress field	75
3.1	The Airy stress function	75
3.2	Complex stress functions	76
3.3	Solution to crack problems	77
3.4	The effect of finite size	82
3.5	Special cases	84
3.6	Elliptical cracks	87
3.7	Some useful expressions	94

Chapter 4

	The crack tip plastic zone	99
4.1	The Irwin plastic zone correction	99
4.2	The Dugdale approach	102
4.3	The shape of the plastic zone	104
4.4	Plane stress <i>versus</i> plane strain	110
4.5	Plastic constraint factor	113
4.6	The thickness effect	116

Chapter 5

	The energy principle	123
5.1	The energy release rate	123
5.2	The criterion for crack growth	128
5.3	The crack resistance (R curve)	130
5.4	Compliance	136
5.5	The J integral	140
5.6	Tearing modulus	145
5.7	Stability	146

Chapter 6

Dynamics and crack arrest	150
6.1 Crack speed and kinetic energy	150
6.2 The dynamic stress intensity and elastic energy release rate	155
6.3 Crack branching	158
6.4 The principles of crack arrest	163
6.5 Crack arrest in practice	170
6.6 Dynamic fracture toughness	173

Chapter 7

Plane strain fracture toughness	179
7.1 The standard test	179
7.2 Size requirements	184
7.3 Non-linearity	186
7.4 Applicability	190

Chapter 8

Plane stress and transitional behaviour	194
8.1 Introduction	194
8.2 An engineering concept of plane stress	194
8.3 The R curve concept	202
8.4 The thickness effect	208
8.5 Plane stress testing	218
8.6 Closure	225

Chapter 9

Elastic-plastic fracture	228
9.1 Fracture beyond general yield	228
9.2 The crack tip opening displacement	230
9.3 The possible use of the CTOD criterion	233

9.4	Experimental determination of CTOD	234
9.5	Parameters affecting the critical CTOD	238
9.6	Limitations, fracture at general yield	240
9.7	Use of the J integral	244
9.8	Limitations of the J integral	247
9.9	Measurement of J_{Ic} and J_R	250
9.10	Closure	255

Chapter 10

Fatigue crack propagation 260

10.1	Introduction	260
10.2	Crack growth and the stress intensity factor	260
10.3	Factors affecting crack propagation	266
10.4	Variable amplitude service loading	272
10.5	Retardation models	276
10.6	Similitude	282
10.7	Small cracks	288
10.8	Closure	293

Chapter 11

Fracture resistance of materials 299

11.1	Fracture criteria	299
11.2	Fatigue cracking criteria	306
11.3	The effect of alloying and second phase particles	308
11.4	Effect of processing, anisotropy	316
11.5	Effect of temperature	321
11.6	Closure	323

Part II APPLICATIONS

Chapter 12

Fail-safety and damage tolerance 328

12.1	Introduction	328
12.2	Means to provide fail-safety	329

<i>Contents</i>	IX
12.3 Required information for fracture mechanics approach	334
12.4 Closure	335
Chapter 13	
Determination of stress intensity factors	339
13.1 Introduction	339
13.2 Analytical and numerical methods	340
13.3 Finite element methods	342
13.4 Experimental methods	350
13.5 Estimating stress intensity factors	356
Chapter 14	
Practical problems	361
14.1 Introduction	361
14.2 Through cracks emanating from holes	361
14.3 Corner cracks at holes	366
14.4 Cracks approaching holes	370
14.5 Combined loading	374
14.6 Fatigue crack growth under mixed mode loading	380
14.7 Biaxial loading	383
14.8 Fracture toughness of weldments	385
14.9 Service failure analysis	388
Chapter 15	
Fracture of structures	391
15.1 Introduction	391
15.2 Pressure vessels and pipelines	392
15.3 "Leak-before-break" criterion	402
15.4 Material selection	406
15.5 Collapse analysis	410
15.6 The use of the J integral for structural analysis	415
15.7 The use of J -estimation schemes	418
15.8 Accuracy of fracture calculations	421

Chapter 16

Stiffened sheet structures	426
16.1 Introduction	426
16.2 Analysis	427
16.3 Fatigue crack propagation	431
16.4 Residual strength	434
16.5 The R curve and the residual strength of stiffened panels	440
16.6 Other analysis methods	443
16.7 Crack arrest	445
16.8 Closure	449

Chapter 17

Prediction of fatigue crack growth	452
17.1 Introduction	452
17.2 The load spectrum	452
17.3 Approximation of the stress spectrum	454
17.4 Generation of a stress history	457
17.5 Crack growth integration	460
17.6 Accuracy of predictions	465
17.7 Safety factors	470

Chapter 18

Problems and solutions	473
18.1 Problems pertaining to chapter 1	473
18.2 Problems pertaining to chapter 2	474
18.3 Problems pertaining to chapter 3	475
18.4 Problems pertaining to chapter 4	476
18.5 Problems pertaining to chapter 5	476
18.6 Problems pertaining to chapter 6	477
18.7 Problems pertaining to chapter 7	478
18.8 Problems pertaining to chapter 8	478

Contents

XI

18.9 Problems pertaining to chapter 9	479
18.10 Problems pertaining to chapter 10	479
18.11 Problems pertaining to chapter 11	480
18.12 Problems pertaining to chapter 12	481
18.13 Problems pertaining to chapter 13	481
18.14 Problems pertaining to chapter 14	482
18.15 Problems pertaining to chapter 15	482
18.16 Problems pertaining to chapter 16	483
18.17 Problems pertaining to chapter 17	485
18.18 Solutions	487
Author index	502
Subject index	509
