

H. P. Yap

Total Colourings of Graphs

Springer

CONTENTS

Preface

Chapter 1: BASIC TERMINOLOGY AND INTRODUCTION

§1. Basic terminology 1

§2. Total-colouring of a graph: introduction 4

Exercise 1 6

Chapter 2: SOME BASIC RESULTS 7

Exercise 2 12

Chapter 3: COMPLETE r -PARTITE GRAPHS

§1. Complete graphs and complete bipartite graphs 15

§2. Complete r -partite graphs of odd order 18

§3. Bermond's theorem 20

Exercise 3 24

Chapter 4: GRAPHS OF LOW DEGREE

§1. Graphs G having $\Delta(G) = 3$ 25

§2. Graphs G having $\Delta(G) = 4$ 30

Exercise 4 33

Chapter 5: GRAPHS OF HIGH DEGREE

§1. Total chromatic number of graphs G having $\Delta(G) \geq |G| - 5$ 35
§2. Total chromatic number of graphs G having $\Delta(G) \geq \frac{3}{4}|G|$ 44
Exercise 5 52

Chapter 6: CLASSIFICATION OF TYPE 1 and TYPE 2 GRAPHS

§1. Even order graphs G having $\Delta(G) = |G| - 1$ 53
§2. Even order graphs G having $\Delta(G) = |G| - 2$ 58
§3. Odd order graphs G having $\Delta(G) = |G| - 2$ 68
§4. Further results 83
Exercise 6 93

Chapter 7: TOTAL CHROMATIC NUMBER OF PLANAR GRAPHS 96

Exercise 7 102

Chapter 8: SOME UPPER BOUNDS FOR THE TOTAL CHROMATIC NUMBER OF GRAPHS 104

Exercise 8 113

Chapter 9: CONCLUDING REMARKS 114

Exercise 9 119
