

# **Mathematical methods in electrical engineering**

**THOMAS B. A. SENIOR**

*Department of Electrical Engineering  
and Computer Science  
University of Michigan*

# Contents

<i>Preface</i>	<i>page</i>	vii
Chapter 1: Complex numbers		1
1.1 Definition		1
1.2 Complex conjugate and modulus		3
1.3 Geometric representation: The complex plane		5
1.4 Powers and roots		7
1.5 Exponential and logarithmic functions		11
Chapter 2: Laplace transforms		13
2.1 Definition of the Laplace transform		13
2.2 Piecewise-continuous functions		17
2.3 Existence and uniqueness		22
2.4 Table of memorable transforms (TMT)		24
2.5 Properties of the Laplace transform		24
2.6 Integration and differentiation		30
2.7 Initial- and final-value theorems		33
2.8 Application to differential equations		35
2.9 Partial fractions		38
2.10 Laplace-transform solution of differential equations		45
Chapter 3. Linear systems		49
3.1 Basic concepts		49
3.2 Step response		53
3.3 Impulse function		55
3.4 Equivalent input		62

3.5	Impulse response	65
3.6	Convolution	68
3.7	Systems analysis	75
3.8	Simultaneous differential equations	82
3.9	Stability	89
3.10	Steady-state response	92
Chapter 4: Fourier series		97
4.1	Periodic functions	98
4.2	Trigonometric series	101
4.3	Fourier series	104
4.4	Symmetry conditions	108
4.5	Mathematical properties	116
4.6	Physical properties and applications	122
4.7	Complex form	129
Chapter 5: Functions of a complex variable		133
5.1	General properties	133
5.2	Analytic functions	145
5.3	Integration in the complex plane	154
5.4	Cauchy's integral theorem and formulas	161
5.5	Power series	172
5.6	Residues and the residue theorem	185
5.7	Closing the contour	192
Chapter 6: Fourier transforms		205
6.1	Derivation from Fourier series	205
6.2	Definition of the transforms	207
6.3	Conditions for existence	210
6.4	Duality, symmetry, and other properties	212
6.5	Evaluation of the transforms	216
6.6	Properties of the Fourier transform	224
6.7	Steady-state response	231
6.8	Convolution	233
6.9	The impulse and other functions	241
6.10	Systems applications	252
Chapter 7: Laplace transform revisited		256
7.1	From Fourier to Laplace	256
7.2	Evaluating the inverse transform	260
7.3	Why Laplace?	263
Answers to Selected Exercises		265
<i>Index</i>		269
