1	Introduction and examples	1
1.1	A preliminary setting of the problem	1
1.1.1	Definitions	2
1.1.2	Contexts	5
1.2	Occurrence of quasi-periodicity	6
1.2.1	Quasi-periodic attractors	6
1.2.2	Quasi-periodic motions in conservative examples	13
1.2.3	Quasi-periodic responses	15
1.3	A further setting of the problem	16
1.3.1	The main problem	16
1.3.2	Contexts revisited: definitions	18
1.3.3	Integrability	21
1.4	Summary	29
1.4.1	A heuristic principle	29
1.4.2	The Hamiltonian coisotropic context	31
1.5	Small divisors and Whitney-smoothness in 1-bite problems	32
1.5.1	Examples and formal solutions	32
1.5.2	Convergence and Whitney-smoothness	35
2	The conjugacy theory	41
2.1	Preliminary considerations	41
2.2	Whitney-smooth families of tori: a definition	44
2.3	Quasi-periodic stability	47
2.3.1	The dissipative context	48
2.3.2	The volume preserving context ($p \geq 2$)	49
2.3.3	The volume preserving context ($p = 1$)	51
2.3.4	The Hamiltonian isotropic context	52
2.3.5	The reversible context 1	53
2.4	The preliminary parameter reduction	55
2.4.1	The dissipative context	55
2.4.2	The volume preserving context ($p \geq 2$)	56
2.4.3	The volume preserving context ($p = 1$)	56
2.4.4	The Hamiltonian isotropic context	57
2.4.5	The reversible context 1	58
2.4.6	The proof in the Hamiltonian isotropic context	58
2.5	The final parameter reduction	60

2.5.1	Diophantine approximations on submanifolds	61
2.5.2	The dissipative context	63
2.5.3	The volume preserving context ($p \geq 2$)	65
2.5.4	The volume preserving context ($p = 1$)	65
2.5.5	The Hamiltonian isotropic context	66
2.5.6	The reversible context 1	67
2.5.7	The proof in the reversible context 1	68
2.6	Converse KAM theory	70
2.7	Whitney-smooth families of tori: results	73
3	The continuation theory	77
3.1	Analytic continuation of tori	77
3.2	Whitney-smooth families of tori: further results	82
4	Complicated Whitney-smooth families	83
4.1	Excitation of normal modes	83
4.1.1	The concept	83
4.1.2	The reversible context ($m + s \geq 1$)	85
4.1.3	The reversible context ($m = s = 0$ and $n \leq 1$)	88
4.1.4	The Hamiltonian context ($n + s \geq 1$)	96
4.1.5	The measure estimates	101
4.2	Resonance zones	102
4.2.1	Poincaré trajectories	104
4.2.2	Treshchëv tori	106
4.2.3	Stability of the action variables	109
4.2.4	Stickiness of the invariant tori	112
4.2.5	Peculiarities of the reversible context	114
4.3	Quasi-periodic bifurcation theory	115
5	Conclusions	123
5.1	Analogues and non-analogues for diffeomorphisms	123
5.1.1	Definitions	123
5.1.2	Contexts	124
5.1.3	Peculiarities of the symplectic and reversible contexts	125
5.1.4	Results	126
5.1.5	Proofs	128
5.1.6	Periodically invariant tori	130
5.1.7	The Poincaré section reduction	130
5.2	Density points of quasi-periodicity	131
5.3	Invariant tori and stability of motion	135
5.3.1	An elliptic equilibrium of a two-degree-of-freedom Hamiltonian vector field	135
5.3.2	An elliptic equilibrium of a reversible vector field in \mathbb{R}^4	137

6 Appendices	141
6.1 Proof of the dissipative Main Theorem	141
