STABILITY THEORY BY LIAPUNOV'S SECOND METHOD

BY

TARO YOSHIZAWA

THE MATHEMATICAL SOCIETY OF JAPAN

1966

CONTENTS

Preface vii
Chapter I. Preliminaries 1
§ 1. Existence, uniqueness and Liapunov function 1
§ 2. Differential equations of Carathéodory type..... 10
§ 3. Continuation of solutions 11
§ 4. Comparison principle 17
§ 5. Dependence of solutions on initial values 21
§ 6. Almost periodic function 24
Chapter II. Liapunov Stability and Boundedness of Solutions 27
§ 7. Definitions of stability 27
§ 8. Theorems on Liapunov stability 31
§ 9. Definitions of boundedness 36
§ 10. Theorems on boundedness..... 38
§ 11. Asymptotic stability in the large 43
Chapter III. Extension of Stability Theory..... 52
§ 12. Positive limiting set 52
§ 13. Semi-invariant set..... 54
§ 14. Asymptotic behavior of solutions 59
Chapter IV. Extreme Stability and Stability of Sets 65
§ 15. Stability and boundedness of systems..... 65
§ 16. Stability of sets..... 72
§ 17. Eventual properties 78
Chapter V. Converse Theorems on Stability and Boundedness 85
§ 18. Converse theorems on stability 85
§ 19. Converse theorems on asymptotic stability 91
§ 20. Converse theorems on boundedness 105
§ 21. Converse theorems on extreme stability..... 108
§ 22. Converse theorems on stability of a set..... 110
Chapter VI. Perturbed Systems 118
§ 23. Total stability and total boundedness 118

§ 24. Behavior of solutions of perturbed systems 121
§ 25. Perturbed systems with small parameters..... 131
§ 26. Asymptotic behavior near integral manifolds 136
§ 27. Asymptotic equivalence 151
Chapter VII. Existence Theorems for Periodic Solutions and Almost Periodic Solutions 154
§ 28. Fixed point theorems 154
§ 29. Existence theorems for periodic solutions 156
§ 30. Existence of a bounded solution..... 165
§ 31. Existence theorems for almost periodic solutions .. 169
Chapter VIII. Functional-Differential Equations..... 183
§ 32. Existence theorem and uniqueness 183
§ 33. Stability of solutions 189
§ 34. Asymptotic behavior of solutions of an autonomous system 195
§ 35. Boundedness of solutions 199
§ 36. Perturbed systems 203
§ 37. Existence theorems for periodic and almost periodic solutions 206
