

# FERROHYDRODYNAMICS

---

R. E. ROSENSWEIG

DOVER PUBLICATIONS, INC.  
Mineola, New York

# CONTENTS

<b>Preface</b>	<b>page</b>	<b>xiii</b>
<b>1 Introduction</b>		<b>1</b>
1.1 Scope of ferrohydrodynamics		1
1.2 Ferromagnetic solids		4
1.3 Magnetic fluids		7
1.4 Ferromagnetic concepts and units		8
Definition of the field		8
External field of a dipole source		12
Magnetic force and torque on dipolar matter		13
Interaction energy of two dipoles		15
1.5 Concepts of fluid mechanics		16
Continuity equation		18
Substantial derivative		22
1.6 Generalized Bernoulli equation		23
1.7 Stress tensor and its physical meaning		25
Force resulting from a stress tensor		29
<i>Addendum: equivalence of dipolar and polar representations</i>		30
<i>Comments and supplemental references</i>		31
<b>2 Magnetic fluids</b>		<b>33</b>
2.1 Stability requirements		34
Stability in a magnetic-field gradient		34
Stability against settling in a gravitational field		35
Stability against magnetic agglomeration		36
Necessity to guard against the van der Waals attractive force		37
2.2 Preparation of magnetic colloids by size reduction		38
2.3 Preparation of ferrofluids by chemical precipitation		40
Magnetite precipitation with steric stabilization		40
Cobalt particles in an organic carrier		43
Charge-stabilized magnetite		43
2.4 Other magnetic fluids		44
Paramagnetic salt solutions		44

	Metallic-base ferrofluid	
2.5	Surface adsorption and steric stabilization	45
	Steric repulsion mechanism	46
	Net interaction curve	46
	Dispersant structural guidelines	48
2.6	Ferrofluid modification	48
	Phenomenological basis	50
	Carrier liquid exchange	50
	Surfactant exchange	51
2.7	Physical properties	54
	Equilibrium magnetization: superparamagnetism	54
	Magnetic relaxation	55
	Viscosity	61
	Concentrated suspensions	63
2.8	Correlation phenomena	66
2.9	Tabulated physical properties	67
	<i>Comments and supplemental references</i>	70
		72
<b>3</b>	<b>Electromagnetism and fields</b>	<b>74</b>
3.1	Magnetostatic field equations	74
	Scalar potential	74
3.2	Magnetic-field boundary conditions	77
3.3	Maxwell stress tensor	77
	Portrait of the Maxwell stress tensor	81
3.4	Maxwell's equations	83
	Integral equations	84
	Differential equations	87
3.5	Energy density of the electromagnetic field	90
3.6	Transformed expression for the field energy	94
	<i>Comments and supplemental references</i>	95
		98
<b>4</b>	<b>Stress tensor and the equation of motion</b>	<b>100</b>
4.1	Thermodynamic background	101
4.2	Formulation of the magnetic stress tensor	103
	Stress tensor of a magnetizable fluid	106
	What is the "pressure" in a magnetized fluid?	108
4.3	Magnetic body-force density	110
	Alternative general forms	111
	Alternative reduced forms	113
	Remarks concerning striction in compressible media	117
4.4	Equation of motion for magnetic fluid	119
	Alternative forms of the equation of motion	121
	<i>Comments and supplemental references</i>	122
		122
<b>5</b>	<b>The ferrohydrodynamic Bernoulli equation</b>	<b>124</b>
5.1	Derivation	124
5.2	Boundary conditions	126
5.3	Categories of equilibrium inviscid flows	131

5.4	<b>Applications of the FHD Bernoulli equation</b>	132
	Classical Quincke problem	132
	Surface elevation in a normal field	133
	Magnetic nozzle	134
	Modified Gouy experiment	136
	Conical meniscus	137
	Origin of the radial force	141
	Magnetic-fluid rotary-shaft seals	142
5.5	<b>Earnshaw's theorem and magnetic levitation</b>	146
	Simplified treatment of the levitation of a nonmagnetic body	149
	Phenomenon of self-levitation	150
	Analysis of forces on an immersed body	153
5.6	<b>Striction effect</b>	157
	<i>Comments and supplemental references</i>	158
<b>6</b>	<b>Magnetocaloric energy conversion</b>	<b>161</b>
6.1	Thermodynamics of magnetic materials	162
6.2	Mechanism for power generation	164
6.3	Linear equation of state	166
6.4	General cycle analysis	168
6.5	Cycle efficiency for a linear material	171
6.6	Cycle efficiency with regeneration	172
6.7	Implementing the cycle	172
6.8	Summary	174
	<i>Comments and supplemental references</i>	175
<b>7</b>	<b>Ferrohydrodynamic instabilities</b>	<b>177</b>
7.1	<b>Normal-field instability</b>	178
	Equation set	178
	Interfacial force balance	179
	Kinematics	182
	Flow-field analysis	183
	Perturbed magnetic field	185
	Boundary conditions on the field vectors	185
	Applying the magnetic boundary conditions	187
	Theoretical predictions	188
	Normal-field instability experiments	193
	Nonlinear analysis	196
7.2	<b>General dispersion relation for moving media with oblique magnetic field</b>	199
7.3	<b>Rayleigh-Taylor problem</b>	200
	Experimental confirmation	202
7.4	<b>Kelvin-Helmholtz instability</b>	202
	Criterion for Kelvin-Helmholtz instability in a ferrofluid	204
7.5	<b>Gradient-field stabilization</b>	206
7.6	<b>Labyrinthine instability</b>	208
	Labyrinth spacing	212
7.7	<b>Stability of fluid cylinders</b>	216
	Magnetic-fluid jet in a uniform field	217

	Cylindrical column in a radial gradient field	222
7.8	Porous-medium flow: fingering instability	225
7.9	Thermoconvective stability	228
7.10	Retrospective	232
	<i>Addendum: representation of disturbance waves</i>	232
	<i>Comments and supplemental references</i>	235
<b>8</b>	<b>Magnetic fluids and asymmetric stress</b>	<b>237</b>
8.1	Phenomena	237
8.2	Cauchy stress principle and conservation of momentum	240
8.3	Integral equation for conservation of angular momentum for nonpolar materials	242
8.4	Reynolds' transport theorem	243
8.5	Cauchy equation of motion	245
8.6	Symmetry of the stress tensor for nonpolar fluids	246
8.7	Analysis for polar fluids	249
8.8	Summary of the basic laws of continuum mechanics	252
8.9	Constitutive relations	253
	Magnetization relaxation process	255
8.10	Analogs of the Navier-Stokes equations for fluids with internal angular momentum	257
8.11	Ferrohydrodynamic-torque-driven flow	258
8.12	Effective viscosity of a magnetized fluid	263
	<i>Comments and supplemental references</i>	269
<b>9</b>	<b>Magnetic two-phase flow</b>	<b>272</b>
9.1	Background	272
9.2	Ordinary fluidization	273
9.3	Some fundamental problems in fluidization engineering	274
9.4	Basic relationships in two-phase flow	276
	Definition of averages	276
	Averaged continuity equations	279
	Averaged magnetostatic relationships	280
	Averaged momentum balances	282
	Constitutive relations	285
9.5	Summary of the averaged equations	288
9.6	Magnetized fluidized solids	289
	Solution in the steady state with a uniform magnetic field	290
9.7	Stability of the steady-state solution	291
	Derivation of the linearized equations	291
	Form of the linearized equations for plane waves	293
	General solution for the voidage perturbation	297
	Nature of the predicted behavior	301
9.8	Experimental behavior	304
	Transition velocity	304
	Influence of the field orientation	306
	Rheology of magnetically stabilized fluidized solids	307

<i>Contents</i>	<b>xi</b>
Directions for further study	312
<i>Comments and supplemental references</i>	312
<b>Appendixes</b>	<b>315</b>
1 Vector and tensor notation	315
2 Application of the Maxwell stress tensor: analysis of a sheet jet	318
