I Introduction

II One-dimensional solids

1 Simply supported beam subjected to a moving constant force 13

1.1 Formulation of the problem 13

1.2 Solution of the problem 16

1.3 Special cases 20

1.3.1 Static case 20

1.3.2 Case with no damping 20

1.3.3 Light damping 22

1.3.4 Critical damping 23

1.3.5 Supercritical damping 23

1.4 Application of the theory 24

1.4.1 The effect of speed 24

1.4.2 Application to bridges 25

1.4.3 Approximate solution of the effects of a moving mass 26

1.4.4 Experimental results 28

1.5 Additional bibliography 32

2 Moving harmonic force 33

2.1 Formulation and solution of the problem 33

2.2 The dynamic coefficient 35

2.3 Application of the theory 37

2.3.1 Comparison of theory with experiments 38

2.3.2 Critical speed and maximum dynamic coefficient for bridges of various spans 41

2.4 Additional bibliography 43

CONTENTS

3	Moving continuous load	44
3.1	Steady-state vibration	44
3.2	Arrival of a continuous load on a beam	48
3.3	Departure of a continuous load from a beam	50
3.4	Application of the theory	51
3.4.1	Approximate calculation of large-span railway bridges	52
3.4.2	Comparison of theory with experiments	53
3.4.3	The dynamic coefficient	55
3.4.4	Pipelines carrying moving liquid	56
3.5	Additional bibliography	56
4	Moving force arbitrarily varying in time	57
4.1	Force linearly increasing in time	58
4.2	Force exponentially varying in time	59
4.3	Moving impulses	60
4.4	Application of the theory	62
4.5	Additional bibliography	65
5	Beam stresses	66
5.1	Calculation by expansion in series	66
5.2	The integro-differential equation	69
5.2.1	Particular solution of the non-homogeneous integro-differential equation	71
5.2.2	General solution of the homogeneous integro-differential equation	75
5.2.3	Numerical example	77
5.3	Combined method	78
5.4	Application of the theory	81
5.5	Additional bibliography	82
6	Beams with various boundary conditions subjected to a moving load	83
6.1	Generalized method of finite integral transformations	83
6.2	Motion of a force generally varying in time, along a beam	86
6.3	Motion of a force along a cantilever beam	91
6.4	Application of the theory	93
6.5	Additional bibliography	93
7	Massless beam subjected to a moving load	94
7.1	Formulation of the problem	94
7.2	Exact solution	95
7.3	Approximate solutions	98
7.3.1	The perturbation method	98
7.3.2	Method of successive approximations	100
7.3.3	Expansion in power series	101

CONTENTS

7.4	Application of the theory	102
7.5	Additional bibliography	102
8	Beam subjected to a moving system with two degrees of freedom	103
8.1	Formulation of the problem	104
8.2	Solution of the problem	108
8.2.1	Dimensionless parameters	108
8.2.2	Reduction of the equations to the dimensionless form	112
8.2.3	Numerical solution	114
8.3	The effect of various parameters	115
8.3.1	The effect of speed	115
8.3.2	The effect of the frequency parameter of unsprung mass	117
8.3.3	The effect of the frequency parameter of sprung mass	118
8.3.4	The effect of variable stiffness of the elastic layer	118
8.3.5	The effect of the ratio between the weights of vehicle and beam	119
8.3.6	The effect of the ratio between the weights of unsprung and sprung parts of vehicle	119
8.3.7	The effect of beam damping	121
8.3.8	The effect of vehicle spring damping	121
8.3.9	The effect of initial conditions	121
8.3.10	The effect of other parameters	123
8.4	Application of the theory	125
8.4.1	Comparison of theory with experiments	125
8.4.2	Dynamic stresses in large-span railway bridges	128
8.5	Additional bibliography	128
9	Beam subjected to a moving two-axle system	129
9.1	Formulation of the problem	129
9.2	Solution of the problem	134
9.2.1	Dimensionless parameters	134
9.2.2	Reduction of the equations to the dimensionless form	137
9.2.3	Reduction of the equations to a form suitable for numerical calculations	140
9.2.4	Numerical solution	142
9.3	The effect of various parameters	145
9.3.1	The effect of speed	145
9.3.2	The effect of the frequency parameter of unsprung mass	148
9.3.3	The effect of the frequency parameter of sprung mass	148
9.3.4	The effect of the ratio between the weights of vehicle and beam	150
9.3.5	The effect of the ratio between the weights of unsprung parts and whole vehicle	150
9.3.6	The effect of the depth of irregularities	150
9.3.7	The effect of the length of irregularities	151

CONTENTS

9.3.8	The effect of other parameters	152
9.4	Application of the theory	153
9.4.1	Comparison of theory with experiments	153
9.4.2	Dynamic stresses in short-span railway bridges	156
9.5	Additional bibliography	156
10	Beam subjected to a moving multi-axle system	157
10.1	Formulation of the problem	157
10.2	Solution of the problem	160
10.2.1	Dimensionless parameters	160
10.2.2	Reduction of the equations to the dimensionless form	162
10.2.3	Numerical solution	163
10.3	The effect of various parameters	165
10.3.1	The effect of speed	165
10.3.2	The effect of other parameters	169
10.4	Application of the theory	169
10.4.1	Comparison of theory with experiments	169
10.4.2	Dynamic stresses in medium-span railway bridges at high speeds	172
10.5	Additional bibliography	172
11	Systems of prismatic bars subjected to a moving load	173
11.1	Frame systems	175
11.1.1	Free vibration	176
11.1.2	Forced vibration	180
11.2	Continuous beams	183
11.2.1	Free vibration	184
11.2.2	Forced vibration	185
11.3	Trussed bridges	188
11.4	Application of the theory	189
11.4.1	Two-span continuous trussed bridge	189
11.4.2	Six-span continuous trussed bridge	190
11.5	Additional bibliography	191
12	Non-uniform beams and curved bars subjected to a moving load	192
12.1	Straight non-uniform bar	192
12.1.1	The network method	192
12.1.2	Galerkin's method	195
12.2	Curved bars	197
12.2.1	Normal-mode analysis	198
12.2.2	Circular arch of constant cross section	199
12.3	Application of the theory	205
12.4	Additional bibliography	205

CONTENTS

13	Infinite beam on elastic foundation	206
13.1	Formulation of the problem	206
13.2	Poles of the function of a complex variable	209
13.2.1	Static case	211
13.2.2	Case with no damping	211
13.2.3	Light damping	211
13.2.4	Critical damping	212
13.2.5	Supercritical damping	213
13.3	Solution of various cases	213
13.3.1	Static case	216
13.3.2	Case with no damping	218
13.3.3	Light damping	219
13.3.4	Critical damping	219
13.3.5	Supercritical damping	222
13.4	Deflection, bending moment and shear force at the point of load action	224
13.4.1	Static case	224
13.4.2	Case with no damping	224
13.4.3	Light damping	225
13.4.4	Critical damping	227
13.5	Application of the theory	228
13.5.1	The effect of moving mass	228
13.5.2	The effect of speed	229
13.5.3	The effect of foundation	230
13.6	Additional bibliography	230
14	String subjected to a moving load	231
14.1	String with a moving force	231
14.2	Motion of a mass along a massless string	233
14.3	String with ends suspended at unequal heights	239
14.3.1	Static deflection of string produced by dead weight and by a concentrated force	241
14.3.2	Motion of a force along a string	241
14.4	Application of the theory	242
14.5	Additional bibliography	243
III Two-dimensional solids		
15	Plates subjected to a moving load	247
15.1	Simply supported rectangular plate	249
15.1.1	Force variable in time moving parallel to x -axis	250

CONTENTS

15.1.2	Motion of a constant force	251	
15.1.3	Motion of a force along a straight line	251	
15.2	Rectangular plate simply supported on opposite edges	253	
15.2.1	Force variable in time moving parallel to x -axis under arbitrary initial conditions	254	
15.2.2	Motion of a constant force	256	
15.3	Application of the theory	257	
15.4	Additional bibliography	259	
16	Infinite plate on elastic foundation		260
16.1	Steady state vibration	261	
16.2	Solution in polar coordinates	262	
16.2.1	Static solution	263	
16.2.2	Approximate solution for subcritical speed	265	
16.3	Application of the theory	266	
16.4	Additional bibliography	266	
IV Three-dimensional solids			
17	Elastic space with a moving force		269
17.1	Quasi-stationary motion of a force in elastic space	270	
17.1.1	Subsonic speed	273	
17.1.2	Transonic speed	276	
17.1.3	Supersonic speed	279	
17.2	Stresses in elastic space	281	
17.3	Application of the theory	284	
17.4	Additional bibliography	284	
18	Force moving on elastic half-space		285
18.1	Motion of a concentrated force on elastic half-space	286	
18.1.1	Subsonic speed	288	
18.1.2	Transonic speed	291	
18.1.3	Supersonic speed	292	
18.2	Motion of a line load on elastic half-space	293	
18.2.1	Subsonic speed	295	
18.2.2	Transonic speed	297	
18.2.3	Supersonic speed	301	
18.3	Motion of a force on elastic half-plane	303	
18.4	Application of the theory	303	
18.5	Additional bibliography	305	

CONTENTS

V Special problems

19	Load motion at variable speed	309
19.1	Motion of a concentrated force	310
19.2	Arrival of a continuous load	314
19.3	The effect of inertial mass of a load moving at variable speed	316
19.3.1	Galerkin's method	318
19.3.2	The perturbation method	320
19.3.3	Series expansion	322
19.4	Application of the theory	323
19.5	Additional bibliography	324
20	Beams subjected to an axial force and a moving load	325
20.1	Beams subjected to a static axial force under a moving load	328
20.1.1	Moving concentrated force	328
20.1.2	Arrival of a continuous load on a beam	329
20.1.3	The effect of mass of a moving continuous load	330
20.2	Suspended beams	333
20.3	Application of the theory	337
20.4	Additional bibliography	338
21	Longitudinal vibration of bars subjected to a moving load	339
21.1	Moving load	341
21.2	Bending and longitudinal vibrations of bars	341
21.3	Application of the theory	342
21.4	Additional bibliography	342
22	Thin-walled beams subjected to a moving load	343
22.1	Beam section with vertical axis of symmetry	345
22.1.1	Vertical constant force	347
22.1.2	Vertical harmonic force	348
22.1.3	Horizontal force and torsion moment	349
22.2	Beam section with two axes of symmetry	352
22.2.1	Horizontal force	353
22.2.2	Torsion moment	353
22.3	Application of the theory	354
22.3.1	The effect of moving mass of a vehicle	355
22.3.2	The torsional effect of counterweights	355
22.3.3	Lateral impacts	356
22.4	Additional bibliography	356
23	The effect of shear and rotatory inertia	357
23.1	Simply supported beam	361

CONTENTS

23.1.1	Timoshenko beam	362	
23.1.2	Shear beam	364	
23.1.3	Rayleigh beam	365	
23.2	Infinite beam on elastic foundation	366	
23.2.1	Timoshenko beam	369	
23.2.2	Shear beam	380	
23.2.3	Rayleigh beam	380	
23.2.4	Bernoulli-Euler beam	381	
23.3	Application of the theory	382	
23.4	Additional bibliography	382	
24	Finite beams subjected to a force moving at high speed		383
24.1	Finite beams	384	
24.2	Simply supported beam	385	
24.3	Application of the theory	387	
24.4	Additional bibliography	387	
25	Non-elastic properties of materials		388
25.1	Viscoelastic beam subjected to a moving load	388	
25.1.1	Perfectly elastic Hooke solid	391	
25.1.2	Kelvin solid	391	
25.1.3	Maxwell solid	394	
25.1.4	Standard linear solid	395	
25.2	Rigid-plastic beam subjected to a moving load	397	
25.2.1	Perfectly rigid beam with plastic hinge	398	
25.2.2	Moving force	405	
25.2.3	Massless beam	408	
25.3	Application of the theory	408	
25.4	Additional bibliography	409	
26	Moving random loads		410
26.1	General theory	411	
26.1.1	Correlation analysis	412	
26.1.2	Spectral density analysis	413	
26.2	Moving random force	414	
26.3	Moving random continuous load	418	
26.4	Infinite beam on random elastic foundation traversed by a random force	421	
26.5	Application of the theory	426	
26.6	Additional bibliography	427	

CONTENTS

VI Appendix and bibliography

27 Tables of integral transformations	431
27.1 Laplace-Carson integral transformation	432
27.2 Fourier sine finite integral transformation	446
27.3 Fourier cosine finite integral transformation	447
27.4 Fourier complex integral transformation	448
27.5 Fourier sine integral transformation	449
27.6 Fourier cosine integral transformation	450
27.7 Hankel integral transformation	451
Bibliography	452
Supplementary bibliography	467
Author index	478
Subject index	485
