

Sergey Edward Lyshevski

# Control Systems Theory with Engineering Applications

With 169 Figures and a CD-ROM

Birkhäuser  
Boston • Basel • Berlin

# Contents

<b>Preface</b>	<b>vii</b>
<b>Acknowledgments</b>	<b>xi</b>
<b>1. Introduction: Modeling, Identification, Optimization, and Control</b>	<b>1</b>
<b>2. Mathematical Model Developments</b>	<b>7</b>
2.1. Engineering Systems and Models . . . . .	7
2.2. Basic Principles in Model Developments . . . . .	14
2.2.1. Newtonian Mechanics . . . . .	15
<b>3. Modeling of Dynamic Systems using MATLAB and SIMULINK</b>	<b>37</b>
3.1. Engineering Computations Using MATLAB . . . . .	37
3.2. Analysis and Modeling of Dynamic Systems Using MATLAB . . . . .	44
<b>4. Analysis and Control of Linear Dynamic Systems</b>	<b>97</b>
4.1. Introduction: Analysis of Multivariable Continuous- and Discrete-Time Systems . . . . .	97
4.2. Continuous-Time Dynamic Systems and Analog Controllers . . . . .	104
4.2.1. Control Bounds . . . . .	116
4.3. Control of Dynamic Systems Using Digital PID Control Laws . . . . .	123
4.4. Hamilton–Jacobi and Lyapunov Methods in Optimal Control of Continuous-Time Systems . . . . .	142
4.4.1. The Hamilton–Jacobi Theory and Optimal Control . . . . .	142
4.4.2. The Lyapunov Theory and Optimal Control . . . . .	179
4.5. Pole Placement Design by Using State Feedback . . . . .	188
4.5.1. Control of a Servo-System with Permanent-Magnet DC Motor . . . . .	192
4.6. Control of Discrete-Time Systems Using the Hamilton–Jacobi Theory . . . . .	204
4.6.1. Linear Quadratic Regulator Problem . . . . .	204
4.6.2. Constrained Optimization of Discrete-Time Systems . . . . .	209
4.6.3. Tracking Control of Discrete-Time Systems . . . . .	212

<b>5. Analysis, Identification, and Control of Nonlinear Dynamic Systems</b>	<b>219</b>
5.1. Nonlinear Analysis of Dynamic Systems . . . . .	219
5.2. State-Space Nonlinear Identification . . . . .	227
5.2.1. Least-Squares Identification . . . . .	229
5.2.2. Time-Domain, Nonlinear, Mapping-Based Identification . .	251
5.3. Design of Stabilizing Controllers Using the Lyapunov Theory . . .	262
5.3.1. Lyapunov Stability Theory and Design of Control Laws . .	262
5.3.2. Design of the Constrained Controllers for Uncertain Nonlinear Systems Using the Lyapunov Stability Theory . .	273
5.4. Optimization of Continuous-Time Systems . . . . .	288
5.4.1. Optimization of Time-Invariant Systems . . . . .	288
5.4.2. Constrained Optimization of Time-Varying Systems . . . .	313
5.4.3. Optimal Control of Nonlinear Continuous-Time Systems: Design of Bounded Controllers Via Generalized Nonquadratic Functionals . . . . .	326
5.4.4. Tracking Control of Continuous-Time Systems . . . . .	330
5.4.5. Robust Control of Nonlinear Continuous-Time Systems . .	337
5.4.6. Robust Tracking Control of Nonlinear Systems . . . . .	342
5.5. Sliding Mode Control . . . . .	347
5.6. Control of Discrete-Time Systems . . . . .	358
5.6.1. Tracking Control . . . . .	359
5.6.2. Constrained Optimization . . . . .	361
5.7. Nonlinear Control of Permanent-Magnet Synchronous Motors . . .	368
5.7.1. Nonlinear Motor Dynamics . . . . .	370
5.7.2. Feedback Linearization and Control . . . . .	373
5.7.3. The Lyapunov-Based Approach . . . . .	375
5.7.4. Analytical and Numerical Results . . . . .	377
5.8. Case Study in Nonlinear Control of Multivariable Systems: Motion Control of Induction Motors . . . . .	378
5.8.1. Mathematical Models of Induction Motors . . . . .	380
5.8.2. Control of Induction Motors . . . . .	386
5.8.3. Control of a Three-Phase Squirrel Cage Induction Motor: Analytical and Experimental Results . . . . .	395
5.9. Control of Servo-Systems With Permanent-Magnet DC Motors . .	401
5.9.1. Proportional-Integral Control . . . . .	402
5.9.2. Tracking Integral Control . . . . .	402
5.9.3. Relay (Time-Optimal) Control . . . . .	405
5.9.4. Sliding Mode Control with Soft Switching . . . . .	407
