George M. Phillips

Interpolation and Approximation by Polynomials

With 22 Illustrations

Springer

Contents

Preface **vii**

1 Univariate Interpolation **1**
1.1 Introduction 1
1.2 The Vandermonde Equations 16
1.3 Forward Differences 28
1.4 Central Differences 40
1.5 q-Differences 43

2 Best Approximation **49**
2.1 The Legendre Polynomials 49
2.2 The Chebyshev Polynomials 64
2.3 Finite Point Sets 82
2.4 Minimax Approximation 87
2.5 The Lebesgue Function 100
2.6 The Modulus of Continuity 116

3 Numerical Integration **119**
3.1 Interpolatory Rules 119
3.2 The Euler–Maclaurin Formula 133
3.3 Gaussian Rules 143

4 Peano's Theorem and Applications **147**
4.1 Peano Kernels 147

4.2 Further Properties 153

5 Multivariate Interpolation **163**
5.1 Rectangular Regions 163
5.2 Triangular Regions 176
5.3 Integration on the Triangle 188
5.4 Interpolation on the q-Integers 195

6 Splines **215**
6.1 Introduction 215
6.2 B-Splines 218
6.3 Equally Spaced Knots 229
6.4 Knots at the q-Integers 239

7 Bernstein Polynomials **247**
7.1 Introduction 247
7.2 The Monotone Operator Theorem 263
7.3 On the q-Integers 267
7.4 Total Positivity 274
7.5 Further Results 280

8 Properties of the q-Integers **291**
8.1 The q-Integers 291
8.2 Gaussian Polynomials 296
