Contents

0	Introduction and Background	1
0.1	Qualitative Systems Concepts	4
0.1.1	Qualitative Structures Concepts	4
0.2	Qualitative Probability Concepts	5
0.3	Qualitative Vibration, Uncertainties, and Control	5
0.4	Analysis and Design: Interrelationships	6
0.5	Computational Modeling and Design	6
0.6	Modeling for Vibration	7
0.6.1	Problem Idealization and Formulation	7
0.6.2	Concepts of Stiffness, Damping, and Inertia	11
0.6.3	Statics and Equilibrium	13
0.6.4	The Equations of Motion	14
0.6.5	Types of System Models	14
0.7	Newton's Second Law of Motion	17
0.8	Units	18
1	Some Mathematics	21
1.1	Taylor Series and Linearization	21
1.2	Ordinary Differential Equations	23
1.2.1	Solution of Linear Equations	25
1.2.2	Homogeneous Solution	25
1.2.3	Particular Solution	29
1.3	Matrices	32
1.3.1	Matrix Operations	34
1.3.2	Determinant and Matrix Inverse	35
1.3.3	Eigenvalues and Eigenvectors of a Square Matrix	37
1.4	Transition	38

2	Single Degree of Freedom Vibration: An Introduction to Discrete Models	39
2.1	Example Problems and Motivation	40
2.1.1	Transport of a Satellite	40
2.1.2	Rocket Ship	40
2.2	Mathematical Modeling: Deterministic	44
2.2.1	Problem Idealization and Formulation	44
2.2.2	Mass, Damping, and Stiffness	46
2.2.3	Sources of Deterministic Approximation	49
2.2.4	Dimensional Analysis	49
2.2.5	Equations of Motion: Newton's Second Law	52
2.2.6	Equations of Motion: Energy Formulation	59
2.2.7	The Rotating Vector Approach to the Equation of Motion	64
2.2.8	Solution of the Equations of Motion	66
2.3	Free Vibration With No Damping	67
2.3.1	Alternate Formulation	69
2.3.2	Phase Plane	70
2.4	Harmonic Forced Vibration With No Damping	72
2.4.1	Resonance	74
2.4.2	Vibration of a Structure in Water	79
2.5	Concepts Summary	81
2.6	Problems	81
3	Single Degree of Freedom Vibration: Discrete Models with Damping	93
3.1	Damping	94
3.2	Free Vibration With Damping	94
3.2.1	Some Time Constants	103
3.2.2	Phase Plane	104
3.3	Forced Vibration With Damping	104
3.4	Harmonic Excitation and Damped Response	108
3.4.1	Harmonic Excitation in Complex Notation	114
3.5	Periodic but Not Harmonic Excitation	129
3.6	Arbitrary Loading: Laplace Transform	135
3.7	Step Loading	143
3.8	Impulsive Excitation	146
3.9	Arbitrary Loading: Convolution	148
3.10	Concepts Summary	155
3.11	Problems	156

4	Single Degree of Freedom Vibration: Advanced Topics	169
4.1	Introduction to Lagrange’s Equation	169
4.2	Notions of Randomness	172
4.3	Notions of Control	174
4.4	The Inverse Problem	175
4.5	A Self-Excited System and Stability	175
4.6	Solution Analysis and Design Techniques	176
4.7	Concepts Summary	188
4.8	Problems	188
4.9	Mini-Projects	190
5	Single Degree of Freedom Vibration: Probabilistic Forces	195
5.1	Introduction	195
5.2	Example Problems and Motivation	200
5.2.1	Random Vibration	200
5.2.2	Fatigue Life	201
5.2.3	Ocean Wave Forces	203
5.2.4	Wind Forces	205
5.2.5	Material Properties	206
5.2.6	Statistics and Probability	207
5.3	Random Variables	208
5.3.1	Probability Distribution	208
5.3.2	Probability Density Function	209
5.4	Mathematical Expectation	211
5.4.1	Variance	213
5.5	Probability Densities Useful in Applications	215
5.5.1	The Uniform Density	215
5.5.2	The Exponential Density	217
5.5.3	The Normal (Gaussian) Density	218
5.5.4	The Lognormal Density	220
5.5.5	The Rayleigh Density	221
5.6	Two Random Variables	222
5.6.1	Covariance and Correlation	224
5.7	Random Processes	228
5.7.1	Basic Random Process Descriptors	228
5.7.2	Ensemble Averaging	229
5.7.3	Stationarity	233
5.7.4	Power Spectrum	236
5.8	Random Vibration	242
5.8.1	Formulation	243
5.8.2	Derivation of Equations	244
5.8.3	Response Correlations	245

5.8.4	Response Spectral Densities	246
5.9	Concepts Summary	250
5.10	Problems	250
5.11	Mini-Projects	258
6	Vibration Control	261
6.1	Introduction	262
6.2	Feedback Control	263
6.3	Performance of Feedback Control Systems	267
6.3.1	Poles and Zeros of a Second Order System	269
6.3.2	Gain Factor	270
6.3.3	Stability of Response	272
6.4	Automatic Control of Transient Response	272
6.4.1	Control Actions	272
6.4.2	Control of Transient Response	274
6.5	Sensitivity to Parameter Variations	279
6.6	State Variable Models	282
6.6.1	Matrix Derivatives and Integrals	286
6.7	Concepts Summary	287
6.8	Problems	287
6.9	Mini-Projects	291
7	Variational Principles	295
7.1	Introduction	295
7.2	Virtual Work	297
7.2.1	Work and Energy	297
7.2.2	Virtual Work	300
7.2.3	d'Alembert's Principle	303
7.3	Lagrange's Equation	308
7.3.1	Lagrange's Equation for Small Oscillations	317
7.4	Hamilton's Principle	318
7.5	Lagrange's Equation with Damping	322
7.6	Concepts Summary	323
7.7	Problems	324
7.8	Additional Readings	329
8	Multi Degree of Freedom Vibration	333
8.1	Example Problems and Motivation	333
8.1.1	Periodic Structures	333
8.1.2	Inverse Problems	334
8.2	Stiffness and Flexibility	334
8.2.1	Influence Coefficients	335

8.3	Derivation of Equations of Motion	343
8.3.1	$[m]$ and $[k]$ Matrix Properties	349
8.4	Undamped Vibration	351
8.4.1	Two Degree of Freedom Motion: Solution by the Direct Method	351
8.4.2	Forced Vibration by the Direct Method	363
8.4.3	Coupled Pendula – Beating	368
8.5	Direct Method: Free Vibration with Damping	376
8.6	Modal Analysis	386
8.6.1	Modal Orthogonality	387
8.6.2	Modal Analysis with Forcing	393
8.6.3	Modal Analysis with Proportional Damping	402
8.6.4	Modal Analysis Compared to the Direct Method	407
8.7	Concepts Summary	410
8.8	Problems	410
8.9	Mini–Projects	419
9	Multi Degree of Freedom Vibration: Advanced Topics	423
9.1	Overview	423
9.2	Generalization to n Degrees of Freedom	423
9.2.1	Modal Matrix $[P]$	425
9.3	Unrestrained Systems	427
9.3.1	Repeated Frequencies	435
9.4	The Geometry of the Eigenvalue Problem	435
9.4.1	Repeated Frequencies	438
9.5	Periodic Structures	439
9.5.1	Perfect Lattice Models	440
9.5.2	Effects of Imperfection	442
9.6	Inverse Vibration: Estimate Mass and Stiffness	443
9.6.1	Deterministic Inverse Vibration Problem	446
9.6.2	Effect of Uncertain Data	449
9.7	Sloshing of Fluids in Containers	454
9.8	Stability of Motion	458
9.9	Stochastic Response of a Linear MDOF System	461
9.10	Rayleigh’s Quotient	465
9.11	Monte Carlo Simulation	470
9.11.1	Random Number Generation	472
9.11.2	Generation of Random Variates	473
9.11.3	Generating a Time–History for a Random Process Defined by a Power Spectral Density	475
9.12	Concepts Summary	477
9.13	Problems	479

9.14	Mini-Projects	482
10	Continuous Models for Vibration	487
10.1	Continuous Limit of a Discrete Formulation	487
10.2	Vibration of Strings	489
10.2.1	Wave Propagation Solution	491
10.2.2	The Wave Equation via Hamilton's Principle	495
10.2.3	The Boundary Value Problem for the String	498
10.2.4	Modal Solution for Fixed-Fixed Boundary Conditions	499
10.3	Longitudinal (Axial) Vibration of Beams	505
10.3.1	Newton's Approach to the Governing Equation	505
10.3.2	Hamilton's Approach to the Governing Equation	507
10.3.3	Simplified Eigenvalue Problem	509
10.3.4	Orthogonality of the Normal Modes	512
10.4	Torsional Vibration of Shafts	514
10.4.1	Torsion of Shaft with Rigid Disk at End	516
10.5	Transverse Vibration of Beams	518
10.5.1	Derivation of the Equations of Motion for the Beam with Shear Distortion: The <i>Timoshenko</i> Beam	519
10.5.2	Boundary Conditions	523
10.5.3	Simplified Eigenvalue Problem	524
10.5.4	Orthogonality of the Normal Modes	531
10.6	Beam Vibration: Special Problems	541
10.6.1	Transverse Vibration of Beam with Axial Force	541
10.6.2	Transverse Vibration of Beam with Elastic Restraints	544
10.6.3	Transverse Vibration of Beam on Elastic Foundation .	546
10.6.4	Response of a Beam with a Moving Support	548
10.6.5	Response of a Beam to a Traveling Force	549
10.7	Concepts Summary	551
10.8	Problems	551
10.9	Mini-Projects	561
11	Continuous Models for Vibration: Advanced Models	575
11.1	Vibration of Membranes	575
11.1.1	Rectangular Membranes	575
11.1.2	Circular Membranes	582
11.2	Vibration of Plates	588
11.2.1	Derivation of the Equation of Motion for Rectangular Plates	589
11.2.2	The Eigenvalue Problem	593
11.3	Random Vibration of Continuous Structures	596
11.4	Approximate Methods	600

11.4.1	Rayleigh's Quotient	600
11.4.2	Rayleigh–Ritz Method	602
11.4.3	The Galerkin Method	608
11.5	Where Variables Do Not Separate	613
11.5.1	Response to Nonharmonic, Time–Dependent Boundary Conditions	613
11.5.2	Flow in a Pipe with Constant Tension	624
11.6	Concepts Summary	630
11.7	Problems	631
11.8	Mini–Projects	634
12	Nonlinear Oscillation	641
12.1	Examples of Nonlinear Vibration	642
12.2	Fundamental Nonlinear Equations	645
12.3	The Phase Plane	646
12.3.1	Stability of Equilibria	651
12.4	Perturbation Methods	654
12.4.1	Lindstedt–Poincaré Method	658
12.4.2	Forced Oscillations of Quasi–Harmonic Systems	662
12.4.3	Jump Phenomenon	666
12.4.4	Periodic Solutions of Non–Autonomous Systems	666
12.5	Subharmonic and Superharmonic Oscillations	672
12.5.1	Subharmonics	673
12.5.2	Combination Harmonics	674
12.6	The Mathieu Equation	675
12.7	The van der Pol Equation	681
12.7.1	Limit Cycles	682
12.7.2	The Forced van der Pol Equation	685
12.8	Motion in the Large	687
12.9	Advanced Topics	691
12.9.1	Random Duffing Oscillator	692
12.9.2	The Nonlinear Pendulum Using a Galerkin Method	694
12.10	Concluding Summary	696
12.11	Problems	696
12.12	Mini–Projects	697
	Index	701
