

Internet Communications Using SIP

**Delivering VoIP and Multimedia Services
with Session Initiation Protocol
Second Edition**

Henry Sinnreich
Alan B. Johnston

WILEY

Wiley Publishing, Inc.

Contents

Foreword	xxi
Acknowledgments	xxiii
Introduction	xxv
Chapter 1 Introduction	1
Problem: Too Many Public Networks	1
Incompatible Enterprise Communications	4
Network Consolidation: The Internet	4
Voice over IP	5
Presence—The Dial Tone for the Twenty-First Century?	6
The Value Proposition of SIP	6
SIP Is Not a Miracle Protocol	6
The Short History of SIP	7
References in This Book	8
SIP Open Source Code and SIP Products	9
References for Telephony	10
Summary	10
References	10
Chapter 2 Internet Communications Enabled by SIP	11
Internet Multimedia Protocols	12
The Value of Signaling	13
Protocols for Media Description, Media Transport, and other Multimedia Delivery	14
Addressing	15
SIP in a Nutshell	15
SIP Capabilities	17
Overview of Services Provided by SIP Servers	18
Peer-to-Peer SIP (P2PSIP)	19

Caller Preferences	19
Mobility in the Wider Concept	20
Global Telephone Number Portability	20
SIP Application-Level Mobility	20
Context-Aware Communications: Presence and IM	21
SIP Presence	21
Instant Messaging	23
The Integration of Communications with Applications	23
E-Commerce: Customer Relations Management	23
Conferencing and Collaboration	24
Telephony Call Control Services	25
Intelligent Network Services Using SIP: ITU Services CS-1 and CS-2	25
SIP Service Creation—Telephony-Style	26
ENUM	27
SIP Interworking with ITU-T Protocols	27
Mixed Internet-PSTN Services	29
PSTN and INTerworking (PINT)	29
SPIRITS	29
TRIP	29
SIP Security	31
SIP Accessibility to Communications for the Hearing and Speech Disabled	31
SIP Orphans	32
Commercial SIP Products	32
What SIP Does Not Do	33
Divergent Views on the Network	34
Summary	35
References	35
Chapter 3 Architectural Principles of the Internet	39
Telecom Architecture	39
Internet Architecture	42
The Internet Backbone Architecture	44
The Internet Standards Process	48
Protocols and Application Programming Interfaces	49
Is XML the Presentation Layer of the Internet Protocol Architecture?	50
Middle-Age Symptoms of the Internet	50
Fighting Complexity	51
Summary	52
References	52
Chapter 4 DNS and ENUM	53
Introduction	53
Addressing on the Internet	54
The Universal Resource Identifier (URI)	54
mailto:	55

The Universal Resource Locator (URL)	55
Tel URI	56
The phone-context	56
SIP URI	57
IANA ENUM Service Registrations	58
The Domain Name System	58
Delegation	59
Caching	59
A Partial DNS Glossary	60
DNS and ENUM Usage Example	62
Finding an Outgoing SIP Server	63
Finding an Incoming SIP Server in the ENUM Case	64
Call Setup Delay	67
DNS-Based Routing Service Using SIP	67
SIP URI or Telephone Number?	67
The ENUM Functional Architecture	69
ENUM and Number Portability	71
Implementation Issues	71
DNS and SIP User Preferences	72
Application Scenarios for SIP Service Using ENUM	73
PBX Enterprise Voice Network	74
Enterprise System with IP Communications	74
Residential User with ENUM Service	76
Miscellaneous: ENUM Lookup of the Display Name	76
DNS and Security	77
Impersonation	77
Eavesdropping	77
Data Tampering	78
Malicious Redirection	78
Denial of Service	78
Summary	79
References	79
Chapter 5 Real-Time Internet Multimedia	81
Introduction	81
Freshening Up on IP	83
Multicast Protocols	85
Multicast Address Allocation	85
Application-Level Multicast	86
Transport Protocols	86
IP Network Layer Services	87
Differentiated Services	88
Resource Reservation	88
Integrated Services and DiffServ Networks	89
Multiprotocol Label Switching	89
Media and Data Formats	90
Media Transport Using RTP	91
RTP Payloads and Payload Format Specifications	92

	Multimedia Server Recording and Playback Control	93
	Session Description	93
	Session Announcements	93
	Session Invitation	93
	Authentication and Key Distribution	94
	Summary	94
	References	94
Chapter 6	SIP Overview	97
	What Makes SIP Special	97
	SIP Enabled Network	98
	Watching How Sausages Are Being Made	101
	What SIP Is Not	102
	Introduction to SIP	102
	Elements of a SIP Network	106
	User Agents	106
	Servers	106
	Location Services	107
	SIP Functions	107
	Address Resolution	108
	Session-Related Functions	110
	Session Setup	110
	Media Negotiation	111
	Session Modification	114
	Session Termination and Cancellation	116
	Mid-Call Signaling	117
	Call Control	118
	Preconditions Call Setup	121
	Nonsession-Related Functions	123
	Mobility	124
	Message Transport	126
	Event Subscription and Notification	127
	Presence Publication	128
	Authentication Challenges	128
	Extensibility	130
	Summary	132
	References	132
Chapter 7	SIP Service Creation	135
	Services in SIP	135
	Service Example	136
	Server Implementation	136
	Called User Agent Implementation	137
	Calling User Agent Implementation	138
	Comparison	140
	New Methods and Headers	141
	Service Creation Options	142

Call Processing Language	142
Introduction to CPL	142
Example of CPL Scripts	146
SIP Common Gateway Interface	147
SIP Application Programming Interfaces	148
SIP Servlets	149
JAIN	149
SIP and VoiceXML	149
Summary	150
References	150
Chapter 8 User Preferences	153
Introduction	153
Preferences of Caller	154
Example for Contact	156
Example for Accept-Contact	156
Example for Reject-Contact	156
Preferences of the Called Party	157
Server Support for User Preferences and for Policies	157
Summary	157
References	158
Chapter 9 SIP Security	159
Threats	159
Session Setup	160
Presence and IM	161
Security Mechanisms	162
Authentication	162
Confidentiality	163
Secure SIP URI Scheme	164
Integrity	165
Identity	165
Media Security	166
SRTP	166
MIKEY	167
SDP Security Descriptions	167
New Directions	168
DTLS	169
ZRTP	169
Summary	169
References	170
Chapter 10 NAT and Firewall Traversal	173
Network Address Translators	174
Firewalls	177
STUN, TURN, and ICE	179
Application Layer Gateways	180
Privacy Considerations	183

	Summary	184
	References	184
Chapter 11	SIP Telephony	185
	Basic Telephony Services	185
	SIP and PSTN Interworking	185
	Gateway Location and Routing	186
	SIP/PSTN Protocol Interworking	187
	Types of Gateways	188
	SIP and Early Media	188
	SIP Telephony and ISUP Tunneling	190
	Enhanced Telephony Services	196
	Call Control Services and Third-Party Call Control	199
	Problem Statement	199
	The REFER Method	201
	SIP Third-Party Call Control	202
	Basic Third-Party Call Control	203
	Security for Third-Party Call Control	203
	Peer-to-Peer Third-Party Call Control	205
	Summary	206
	References	207
Chapter 12	Voicemail and Universal Messaging	209
	Problem Statement for Unified Messaging	209
	Architecture and Operation	211
	RTSP-Enabled Voice Message Retrieval	212
	Depositing of Voice Messages	214
	Notification for Waiting Messages	217
	Simple Message Notification Format	217
	Rich Message Notification Format	220
	Retrieval of Messages	221
	Summary	221
	References	221
Chapter 13	Presence and Instant Messaging	223
	The Potential of SIP Presence, Events, and IM	224
	The Evolution of IM and Presence	225
	The IETF Model for Presence and IM	226
	Client Server and Peer-to-Peer Presence and IM	228
	SIP Event-Based Communications and Applications	229
	Presence Event Package	231
	Presence Information Data Format	233
	The Data Model for Presence	235
	Indication of Message Composition for IM	236
	Rich Presence Information	236
	SIP Extensions for Instant Messaging	239
	Summary	241
	References	242

Chapter 14	SIP Conferencing	245
	Introduction	245
	SIP Conferencing Models	246
	Ad Hoc and Scheduled Conferences	249
	Changing the Nature of a Conference	249
	Centralized Conferencing	251
	Summary	251
	References	251
Chapter 15	SIP Application Level Mobility	253
	Mobility in Different Protocol Layers	254
	Dimensions of Mobility	255
	Examples of SIP Application-Layer Mobility	256
	SIP Network-Based Fixed-Mobile Convergence	261
	SIP Device-Based Fixed-Mobile Convergence	263
	SIP Application-Layer Mobility and Mobile IP	263
	Multimodal Mobile Device Technology and Issues	265
	Network Control versus User Control of Mobility	266
	IEEE 802.21 Media-Independent Handover (MIH)	267
	Network Selection Issues	269
	Summary	270
	References	270
Chapter 16	Emergency and Preemption Communication Services	273
	Requirements	274
	Location Information	275
	Types of Location Information	275
	Sources of Location Information	275
	DNS-Based Location Information	275
	Internet-Based Emergency Calling	277
	Identifying an Internet Emergency Call: The SOS URI	278
	Internet Emergency Call Routing	278
	Security for Emergency Call Services	279
	Using the PSTN for VoIP Emergency Calls	280
	Emergency Communication Services	281
	Emergency Call Preemption Using SIP	282
	Linking SIP Preemption to IP Network and Link Layer	
	Preemption	284
	Summary	285
	References	285
Chapter 17	Accessibility for the Disabled	287
	About Accessibility	287
	Accessibility on Legacy Networks and on the Internet	288
	Requirements for Accessibility	289
	Text over IP (ToIP)	290
	Performance Metrics for ToIP	293

	Transcoding Services	294
	Transcoding Scenarios	294
	Call Control Models for Transcoding Services	296
	Summary	298
	References	299
Chapter 18	Quality of Service for Real-Time Internet Communications	301
	Voice Quality Metrics	303
	Delay Limits for Voice	303
	Burst vs. Average Packet Loss	304
	Acoustics and the Network	304
	Internet Codecs	305
	Codecs in Wireless Networks and Transcoding	307
	Codec Bandwidth	307
	The Endpoint Quality for Voice	308
	The Internet Performance	308
	Concerns Regarding Congestion Control	309
	Internet Traffic Statistics: Voice Is Negligible	309
	A Summary of Internet QoS Technologies	311
	Best Effort Is for the Best Reasons	313
	Monitoring QoS for Real-Time Communications	314
	Summary	315
	References	315
Chapter 19	SIP Component Services	317
	Master/Slave VoIP Systems	318
	IP Telephony Gateways	320
	The Converged Applications Environment	323
	The Control of Service Context	326
	Voicemail	328
	Collecting DTMF Digits	330
	Interactive Voice Response System	333
	Scheduled Conference Service	335
	Summary	337
	References	337
Chapter 20	Peer-to-Peer SIP	339
	Definitions for P2P Networks	340
	Overlay Networks	340
	Peer-to-Peer Networks	341
	Distributed Hash Tables (DHTs)	342
	Characteristics of P2P Computing	344
	Security of P2P Networks	344
	The Chord Protocol	345
	P2P SIP	346
	CS SIP Model	347
	P2P SIP Model	348

Use Cases for P2P SIP	348
Disruption of the VoIP Infrastructure Model	349
Summary	350
References	351
Chapter 21 Conclusions and Future Directions	353
Short Term Challenges	355
Future Services: The Internet Is the Service	355
Still to Develop: Peer-to-Peer SIP Standards	355
Prediction: The Long Road Ahead	356
Summary	356
References	356
Index	357
