Disclaimer

The experiments in this book have been exhaustively tested for safety and all attempts have been made to use the least hazardous chemicals and procedures possible. However, the author and publisher cannot be held liable for any damage which may occur during the performance of the experiments. It is assumed that before an experiment is initiated, a material safety data sheet for each chemical used will have been studied by the Instructor and students to ensure its safe handling and disposal.

# Table of Contents

## Part I  Theory and Experimental Techniques

### Chapter 1  Introduction to the Biochemistry Laboratory  3
- A. Safety in the Laboratory  3
- B. The Laboratory Notebook  7
  - Details of Experimental Write-up  8
- C. Cleaning Laboratory Glassware  10
  - Cleaning Plasticware and Glassware  10
  - Cleaning Quartz and Glass Cuvettes  10
- D. Quantitative Transfer of Liquids  11
  - Filling a Pipet  12
  - Disposable Pasteur Pipets  12
  - Calibrated Pipets  12
  - Automatic Pipetting Systems  14
  - Cleaning and Drying Pipets  16
- E. Preparation and Storage of Solutions  17
  - Water Quality  17
  - Reagent and Solution Preparation and Storage  18
- F. Statistical Analysis of Experimental Measurements  19
  - Analysis of Experimental Data  19
  - Determination of the Mean, Sample Deviation, and Standard Deviation  20
  - Statistical Analysis in Practice  24
- References  26

### Chapter 2  General Laboratory Procedures  29
- A. pH Measurements, Buffers, and Electrodes  29
  - Measurement of pH  30
  - Biochemical Buffers  32
Chapter 3 Separation and Purification of Biomolecules by Chromatography 59

A. Introduction to Chromatography 59
  Partition versus Adsorption Chromatography 60

B. Paper and Thin-Layer Chromatography 61
  Preparation of the Stationary Support 62
  Solvent Development of the Support 63
  Detection and Measurement of Components 64
  Applications of Paper and Thin-Layer Chromatography 64

C. Gas Chromatography 65
  Instrumentation 65
  Selection of Operating Conditions 67
  Analysis of GC Data 69
  Advantages and Limitations of GC 70

D. Column Chromatography (GC) 70
  Operation of a Chromatographic Column 71
Packing the Column 72
Loading the Column 72
Eluting the Column 72
Collecting the Eluent 74
Detection of Eluting Components 74
Advantages and Limitations of Adsorption Column Chromatography 75

E. Ion-Exchange Chromatography 75
   Ion-Exchange Resins 76
   Selection of the Ion Exchanger 77
   Choice of Buffer 79
   Preparation of the Ion Exchanger 79
   Using the Ion-Exchange Resin 80
   Storage of Resins 81

F. Gel Exclusion Chromatography 81
   Theory of Gel Filtration 81
   Physical Characterization of Gel Chromatography 82
   Chemical Properties of Gels 83
   Selecting a Gel 85
   Gel Preparation and Storage 85
   Operation of a Gel Column 86
   Applications of Gel Exclusion Chromatography 87

G. High-Performance Liquid Chromatography (HPLC) 90
   Instrumentation 91
   Stationary Phases in HPLC 94
   The Mobile Phase 98
   Solvents for HPLC Operation 99
   Gradient Elution in HPLC 100
   Sample Preparation and Selection of HPLC Operating Conditions 101
   FPLC—A Modification of HPLC 102

H. Affinity Chromatography and Immunoabsorption 102
   Chromatographic Media 104
   The Immobilized Ligand 104
   Attachment of Ligand to Matrix 105
   Experimental Procedure for Affinity Chromatography 108

I. Perfusion Chromatography

References 111
Chapter 4  Characterization of Proteins and Nucleic Acids 
by Electrophoresis  115
  A. Theory of Electrophoresis  115
  B. Methods of Electrophoresis  117
      Polyacrylamide Gel Electrophoresis (PAGE)  117
      Nucleic Acid Sequencing Gels  126
      Agarose Gel Electrophoresis  126
      Pulsed Field Gel Electrophoresis (PFGE)  130
      Isoelectric Focusing of Proteins  132
      Two-Dimensional Electrophoresis of Proteins  135
      Capillary Electrophoresis (CE)  135
      Immunoelectrophoresis (IE)  136
  C. Practical Aspects of Electrophoresis  138
      Instrumentation  138
      Reagents  138
      Staining and Detecting Electrophoresis Bands  139
      Protein and Nucleic Acid Blotting  141
      Analysis of Electrophoresis Results  141
  References  143

Chapter 5  Spectroscopic Analysis of Biomolecules  147
  A. Ultraviolet-Visible Absorption Spectrophotometry  147
      Principles  147
      Instrumentation  152
      Applications  156
  B. Fluorescence Spectrophotometry  164
      Principles  164
      Instrumentation  167
      Applications  168
  References  171

Chapter 6  Radioisotopes in Biochemical Research  173
  A. Origin and Properties of Radioactivity  173
      Introduction  173
      Isotopes in Biochemistry  176
      Units of Radioactivity  177
  B. Detection and Measurement of Radioactivity  178
      Liquid Scintillation Counting  178
Experiment 8  Fatty Acid Content of Triacylglycerols in Natural Oils  335
Experiment 9  Identification of Carbohydrates by Polarimetry  347
Experiment 10  Characterization of Hemoglobin A1c by Affinity Chromatography  363
Experiment 11  Isolation, Separation and Spectrophotometric Characterization of Photosynthetic Pigments  379
Experiment 12  Photoinduced Proton Transport Through Chloroplast Membranes  391
Experiment 13  Isolation, Subfractionation and Enzymatic Analysis of Beef Heart Mitochondria  403
Experiment 14  Cholesterol (Total and HDL) and Uric Acid Content of Blood Serum: Enzymes as Reagents in Clinical Chemistry  417
Experiment 15  Vitamin C Content of Fruits, Vegetables and Other Foods  433
Experiment 16  Activity and Thermal Stability of Acrylamide Gel–Immobilized Peroxidase: An Experiment in Biotechnology  441
Experiment 17  Extraction of Chromosomal DNA from Bacterial Cells  451
Experiment 18  Characterization of Nucleic Acids by Fluorescence of Bound Ethidium Bromide  465
Experiment 19  Preparation, Isolation, and Purification of Bacterial Plasmid DNA  475
Experiment 20  Rapid, Microscale Isolation of Plasmid DNA  491
Experiment 21  The Action of Restriction Endonucleases on Plasmid or Viral DNA  497
Experiment 22  Specific Cleavage of an Oligomeric Ribonucleotide Substrate by a Ribozyme (RNA Enzyme)  509

Appendices
I  Properties of Common Acids and Bases  521
II  Properties of Common Buffer Compounds  522
III  pKₐ Values and pHₐ Values of Amino Acids  523
IV  Molecular Weights of Some Common Proteins  524
V  Common Abbreviations used in this Text  525
VI  Units of Measurement  527
VII  Table of the Elements  529
VIII Values of $t$ for Analysis of Statistical Confidence Limits  531
IX   Solutions to Selected Questions  532

Index  547
