CONTENTS

Theoretical Biochemistry and Molecular Biophysics
Volume 2: Proteins

Extending the Limits of Protein Structure Determination by NMR
G. Marius Clore, and Angela M. Gronenborn, National Institute of
Health, Bethesda, MD 20892, USA ................................................................. 001

Monte Carlo Calculations on Proteins: Hydration and Electron Tran-
fer Processes
Julia M. Goodfellow¹, Mansoor Saqi¹, Narmada Thakur¹, Jeremy O.
Baum² and John L. Finney¹,²,¹ Birkbeck College, London WC1E 7HX
United Kingdom and ²RAL, Chilton, Didcot, Oxon, OX11 0QX .................... 017

Biomolecular Conformation, Recognition and Electronics
R.V. Hosur, Ratna S. Phadke, Anil Saran and Girjesh Govil, Tata
Institute of Fundamental Research, Bombay 400005, India ....................... 031

Microfolding: Use of Simulations to Study Peptide/Protein Confor-
mational Equilibria
Jan Hermans and Amil G. Anderson, University of North Carolina,
Chapel Hill, NC 27599-7260 ................................................................. 045

Environmental Effects on Electrostatic Interactions
Barry Honig, Columbia University, 630 West 168 St., New York, NY
10025 ........................................................................................................... 063

Coarse Graining Conformations: A Peptide Binding Exampl e
Robert L. Jernigan, Hanah Margalit and David G. Covell, National
Cancer Institute, Bldg. 10, Room 4B-56, Bethesda, MD 20892 ................. 069

Conserving Energy During Molecular Dynamics Simulations ofPro-
teins in Water
Douglas B. Kitchen, Fumio Hirata and Ronald M. Levy, Rutgers
University, New Brunswick, New Jersey 08903 ......................................... 077

Studies of Structure, Spectra, and Function of Heme Proteins and
Mechanisms of Drug Action and Rational Drug Design
Gilda H. Loew, Jack R. Collins and Hugo O. Villar, Molecular Research
Institute, Palo Alto, CA 94304 ................................................................. 087

Electrostatic and Dynamic Aspects of Macromolecular Recognition
James B. Matthew, ICI Pharmaceuticals, ICI Americas Inc., Wilmington,
DE 19897 ..................................................................................................... 107

Molecular Recognition, Encounter and Complex Formation in Solution
J. Andrew McCammon, University of Houston, Houston, TX 77204-
3641 ......................................................................................................... 121
Environmental Effects in the Molecular Mechanisms of Action of Bioactive Compounds
Stanislav Miertsug, Vladimir Frecer and Magdaléna Májeková,
Slovak Technical University 81232 Bratislava, Czechoslovakia, 1
Slovak Academy of Sciences, 81237, 284216 Bratislava, Czechoslovakia .......................... 131

Exploitation of the Bond Concept in the Theoretical Study of Proteins: Serine Proteases and Dihydrofolate Reductase
János G. Ángyán, György Kramer, Péter Nagy, Péter R. Surján and
Gábor Náray-Szabó, CHINOIN Pharmaceutical and Chemical Works, H-
1325 Budapest, P.O. Box 110, Hungary ................................................................. 153

Electrostatic Potential Analysis of Dibenzo-p-dioxins and Structurally Similar Systems in Relation to Their Biological Activities
Peter Politzer and Jane S. Murray, University of New Orleans, New
Orleans, LA 70148 .................................................................................................. 165

Molecular Mechanisms of Specificity in DNA-Antitumor Drug Inter-
actions
B. Pullman, Institut de Biologie Physico-Chimique, Laboratoire de Biochimie
Theorique associe au C.N.R.S., 13 rue Pierre et Marie Curie, 75003 Paris, France .......................... 193

Computer-Aided Design of Biomolecules: The Big Hammer Approach
Barry Bobson, Eric Platt and Jin Li, Proteus International plc, Proteus
House, 48 Stockport Road, Marple, Cheshire, SK6 6AB UK ........................................ 207

Modeling of Solvation Effects in Biopolymer Solutions
B. Montegomery Pettitt and Peter J. Rossky1, University of Houston,
Houston, TX 77204-5641 and 1 University of Texas, Austin, TX 78712 .......... 223

Experimental and Theoretical Aspects of Protein Conformation
Harold A. Scheraga, Cornell University, Ithaca, NY 14853-1301 ............. 231

Nonempirical Modelling of Intermolecular Interactions and Electrostatic Effects in Biomolecules
W. Andrzej Sokalski, Institute of Organic and Physical Chemistry (I-4),
Wyb. Wyspianskiego 27, 50-370 Wroclaw, Poland ........................................... 239

Microscopic Simulations of Chemical Processes in Proteins and the Role of Electrostatic Free Energy
Arieh Warshel and Johan Aqvist, University of Southern California, Los
Angeles, California, 90089-1062 ................................................................. 257

Molecular Biophysics of Specificity and Function in Enzymes, Re-
ceptors and Calcium Binding Proteins
Harel Weinstein and Roman Osman, Mount Sinai School of Medicine of
the City University of New York, New York, New York 10029 ..................... 275

Generalization of the Pseudorotation Concept to Cyclic Systems
Kenneth J. Miller, Rensselaer Polytechnic Institute, Troy, NY 12180-3590 .... 291

Library of Atomic Multipole Moments for Biopolymer Building Blocks
Joyce J. Kaufman and W. Andrzej Sokalski, The Johns Hopkins Univer-
sity, Baltimore, MD 21218, USA ................................................................. 305
The Tautomism of the Nucleic Acid Bases Revisited: From Non-Interacting to Interacting Bases
Józef S. Kwiatkowski and Willis B. Person, N. Copernicus University, 87-100 Torun, Poland and University of Florida, Gainesville, FL 32611, USA ................................................................. 153

Modelling DNA and Its Interactions: Techniques and Applications
Richard Lavery and Krystyna Zakrzewska, Institut de Biologie Physico-Chimique, 13 rue Pierre et Marie Curie, Paris 75005, France .............................. 173

Electric and Elastic Instabilities of DNA
Gerald S. Manning, Rutgers University, New Brunswick, NJ 08903 .......... 191

Drug-DNA Intercalation: The Design of New Anti-Cancer Agents by Computer-Modelling Methods
Stephen Neidle, The Institute of Cancer Institute of Cancer Research, Sutton, Surrey SM2 5NG, United Kingdom ..................................................... 207

Base Sequence Effects in Linear and Closed Circular Double Helical DNA
Wilma K. Olson, A.R. Srinivasan, Nancy L. Marky, Rachid C. Maroun, Maria S. Babcock, Janet Cicariello, Marcia O. Fenley, Ming-Hong Hao, and Jeffrey L. Nauss, Rutgers, the State University of New Jersey, New Brunswick, New Jersey 08903 ........................................................................ 215

The Structure of the Electrolyte Environment of DNA
George R. Pack, Gene Lamm, Linda Wong and David Clifton, University of Illinois College of Medicine, 1601 Parkview Ave., Rockford, IL 61107 .............................................................. 237

Investigation of Nucleic Acid Structure and Functioning by Computations of Intermolecular and Intramolecular Energy Using Atom-Atom Potential Functions
V.I. Poltev, Institute of Biological Physics, 142292 Pushchino, Moscow Region, USSR ....................................................................................... 247

Atomic Partial Charges for Nucleic Acids From X-Ray Diffraction Data
David A. Pearlman and Sung-Hou Kim, University of California, Berkeley, CA 94720 ................................................................. 259

On the Use of Empirical Potentials in Studies of Base Stacking in DNA
Jiří Šponer and Jaroslav Kyrr, Parkinje University, Kotarska 2, CS-611 37 Brno, Czechoslovakia and Institute of Biophysics, Kralovopolska 135, CS-612 65 Brno, Czechoslovakia ................................................. 271

Theoretical Studies of the Thermodynamic Consequences of Interactions of Ions with Polymeric and Oligomeric DNA: The Preferential Interaction Coefficient and Its Application to the Thermodynamic Analysis of Electrolyte Effects on Conformational Stability and Ligand Binding
M. Thomas Record, Jr., Martha Olmsted and Charles F. Anderson, University of Wisconsin-Madison, Madison, WI 53706 ........................................ 285
Molecular Mechanism of Base Substitutional Mutations: From Hydrogen Bonding to Molecular Dynamics
Masayuki Shibata, Theresa Julia Zielinski¹ and Robert Rein, Roswell Park Memorial Institute, Buffalo, NY 14263 and ¹Niagara University, Niagara University, NY 14109 ................................................................. 309

Bioreductive Anti-Cancer Drugs
W. Graham Richards and Christopher A. Reynolds, Oxford University, South Parks Road, Oxford, OX1 3QZ, UK ................................................................. 321

Straight and Curved DNA: Structural Variability Revisited
Manju Bansal and V. Sasi Sekharan, Indian Institute of Science, Bangalore 560012, India ................................................................. 329

The Potentials of Mean Force (PMF) Approach for Treating Ionic Effects on Biomolecular Structures in Solution
Dikeos Mario Soumpasis¹,², Angel Garcia¹,³, Reinhard Klement¹ and Thomas Jovin¹, ¹Max Planck Institute for Biophysical Chemistry, P.O. Box 2841, 3400 Goettingen, FRG and ²Los Alamos National Laboratory, Los Alamos, NM 87545 USA ................................................................. 343

Applications of Theoretical Chemistry Techniques to Some Problems in Cancer Research
Colin Thomson, University of St. Andrews, St. Andrews, KY16 8ST, Scotland ................................................................. 361

DNA as Chromatin Organizer
E.N. Trifonov, The Weizmann Institute of Science, Rehovot 76100, Israel ................................................................. 377

Modelling of DNA Interactions
Francoise Violette and Julie M. Goodfellow¹, Centre de Biophysique, IA Avenue de la Recherche Scientifique, 45071 Orleans Cedex 2, France and ¹Birkbeck College, Malet Street, London WC1E 7HX, United Kingdom ................................................................. 389

Computer-Aided Structural Biochemistry of Ribonucleic Acids
E. Westhof, P. Romby, C. Ehresmann and B. Ehresmann, Institut de Biologie Moléculaire et Cellulaire, Centre National de la Recherche Scientifique, 15, rue R. Descartes, F-67084 Strasbourg-Cedex ................................................................................................. 399

Sequence-Dependent Variability of A and B-DNA. Bending, Torsional and Stretching Flexibility, Interconversion of Sugar Rings and Bulged-out Structures
V.B. Zhukov¹,², A.A. Gorin¹, A.A. Charakhchyan¹ and N.B. Ulyanov¹, ¹Institute of Molecular Biology, 117 984 Moscow B-334, Vavilov str. 32, USSR and ²Laboratory of Mathematical Biology, National Cancer Institute, NIH, Bethesda, MD 20892, USA ................................................................. 411

Index to Authors ................................................................................................................................. 433
