Information Press Ltd, Eynsham, Oxford
Contents

List of contributors xxi
List of abbreviations xxiii

1. Historical introduction 1
   J. M. Gershoni
   References 2

SECTION 1. BASIC EQUIPMENT AND METHODS FOR PROTEIN BLOTTING

2. Introduction and basic set-up for protein transfer 5
   Bonnie S. Dunbar
   1. Introduction 5
   2. Equipment 5
       Basic equipment for one- and two-dimensional polyacrylamide gel electrophoresis (PAGE) prior to protein transfer 5
       Protein equipment for the electrophoretic transfer of proteins 7
   3. Buffers and detergents used for the electrophoretic transfer of proteins 8
   4. Types of immobilizing matrices 9
   5. Summary 9
   References 9

xi
3. Protein blotting and immunoblotting using nitrocellulose membranes

   Antonio De Maio

1. Scope and introduction   11
2. Transfer of proteins onto nitrocellulose filters  11
   Type of gel to be blotted  12
   Preparation of the samples  12
   Electrophoretic transfer of proteins onto nitrocellulose filters  14
3. Staining of blots for total protein pattern  16
4. Immunostaining of blots  17
   Comments about the immunostaining protocol  19
5. Lectin overlays  25
   Controls for lectin overlays  28
   Sialidase treatment of blots  29
6. Other protein blot applications  29
7. Concluding remarks  29
   Acknowledgements  29
   Appendix 1  29
   Appendix 2  30
   References  31

4. Protein blotting using polyvinylidene fluoride membranes

   Michael A. Mansfield

1. Introduction  33
2. Membrane selection  33
   Available membranes  33
   Choosing a membrane  35
3. Blotting procedures  38
   Handling membranes  38
   Membrane preparation  38
   Tank transfer  39
   Semi-dry transfer  41
   Optimizing transfer  45
   Post-transfer manipulations  46
4. Protein visualization  46
   Transillumination  46
5. Protein blotting using semi-dry electrophoretic transfer equipment

_Gunilla Jacobson_

1. Introduction

2. Composition of a transfer sandwich

3. Equipment
   - Instruments used for semi-dry electrophoretic transfer
   - Blotting membranes
   - Filter papers
   - Buffer

4. Preparation of the transfer sandwich
   - Removing the gel from the backing
   - Equilibration of the gel with transfer buffer
   - Assembling and dismantling the transfer sandwich

5. Running conditions
   - Time and current
   - Cooling

6. Post-transfer treatment of the membrane
   - General protein staining
   - Specific protein staining
   - Plastic embedding of nitrocellulose membranes

7. Transfer recovery

8. Trouble-shooting
   - Gel residues on the backing film
   - Heating and/or voltage increase during transfer
   - Difficulties in separating the blotting membrane from the gel
   - No proteins are detected on the blotting membrane
   - Disturbed pattern on the blotting membrane
   - Low recovery on the blotting membrane

SECTION 2. PRINCIPLES AND METHODS FOR PREPARING SAMPLES FOR PROTEIN TRANSFER

6. Transfer and blocking conditions in immunoblotting

A. Van Dam

1. Introduction

2. Effects of antigen and antibody concentration on immunoblotting

3. Experimental design to detect the antigen or antibodies

4. How to determine protein loss and protein renaturation
   - Protein staining
   - Radiolabelled proteins
   - Protein renaturation
   - Optimization of transfer conditions
   - Transfer efficiency
   - Effects of SDS
   - Semi-dry blotting
   - Renaturation
   - Drying of the blot
   - Glutaraldehyde fixation
   - Blotting matrices
   - Saturation and incubation conditions
   - Detergents
   - Blocking proteins
   - Time and temperature
   - Choice of second antibody and substrate
   - Binding of proteins on dot-bLOTS
   - Quality control

References

7. Sample preparation for protein electrophoresis and transfer

Vaughan H. Lee and Bonnie S. Dunbar

1. Introduction
SECTION 3. DETECTION METHODS AND USES IN IMMUNOBLOTTING

9. Radiometric methods for detection in blots

R. A. Laskey

1. Introduction
2. Choosing a detection method
   When to use direct autoradiography
   When to use fluorography
   When to use an intensifying screen
   When to use a phosphorimager
3. How to use the detection methods
   General considerations for working with radiographic film
   Procedure for direct autoradiography
   Procedure for fluorography of weak β-emitters
   Use of intensifying screens to increase sensitivity for 32P or γ-ray emitters
4. Quantitation of film images, including chemiluminescent and bioluminescent images
5. The underlying principles of radioisotope detection by X-ray film

References

10. Bioluminescence-enhanced detection systems in protein blotting

1. Introduction
2. Principle and application
3. Bioluminescence-enhanced detection: detection scheme
4. Special hints for application and trouble-shooting

References
## 11. Chemiluminescent detection systems for protein blotting

*Ian Durrant and Sue Fowler*

1. Introduction

2. Basic protocol for ECL Western blotting
   - Membrane blocking
   - Antibody incubations
   - Molecular weight estimation

3. Signal generation
   - Substrate preparation
   - Development of blots
   - Light capture
   - Trouble-shooting

4. Quantification of signal

5. Reprobing blots

6. Conclusion

## 12. Detection and characterization of glycoprotein carbohydrate chains after electrophoretic separation

*Tatsuro Irimura and Hiroto Kawashima*

1. Introduction

2. Lectin staining of electrophoretically separated glycoproteins with *in situ* chemical modification of carbohydrate chains

3. Release of oligosaccharides from electrophoretically separated glycoproteins

### References
## 2. Preparation of PVDF replicas of SDS-PAGE gels

- SDS-PAGE and transfer to PVDF membranes
- Visualization of the blotted proteins

## 3. Elution of proteins from the PVDF membranes

- General comments
- Elution of proteins with detergent-based eluants
- Elution of proteins with other eluants

## 4. Immunization

- Acknowledgements
- References

### 16. Amino acid sequence analysis of blotted proteins

*Richard G. Cook*

1. Introduction
2. Preparation of the sample for sequencing
   - Gel electrophoresis
   - Blotting procedures
   - Protein detection
3. NH$_2$-terminal sequence analysis
4. Generation of peptides for internal sequence analysis
   - Elution and cleavage of proteins immobilized on PVDF
   - Enzymatic cleavage of PVDF-eluted peptides
   - Enzymatic digestion of proteins in gel slices
5. Concluding remarks
   - Acknowledgements
   - References

### 17. Renaturative catalytic blotting of enzyme proteins

*Jia-Shi Zhu and Gary M. Gray*

1. Introduction

---

**Contents**

2. Preparation of PVDF replicas of SDS-PAGE gels 190
   - SDS-PAGE and transfer to PVDF membranes 190
   - Visualization of the blotted proteins 192
3. Elution of proteins from the PVDF membranes 195
   - General comments 195
   - Elution of proteins with detergent-based eluants 197
   - Elution of proteins with other eluants 199
4. Immunization 202
   - Acknowledgements 204
   - References 205
16. Amino acid sequence analysis of blotted proteins 207
   *Richard G. Cook*
1. Introduction 207
2. Preparation of the sample for sequencing 208
   - Gel electrophoresis 208
   - Blotting procedures 210
   - Protein detection 212
3. NH$_2$-terminal sequence analysis 213
4. Generation of peptides for internal sequence analysis 213
   - Elution and cleavage of proteins immobilized on PVDF 214
   - Enzymatic cleavage of PVDF-eluted peptides 217
   - Enzymatic digestion of proteins in gel slices 218
5. Concluding remarks 219
   - Acknowledgements 219
   - References 219
17. Renaturative catalytic blotting of enzyme proteins 221
   *Jia-Shi Zhu and Gary M. Gray*
1. Introduction 221
