Contents

List of contributors xvi
Abbreviations xix

1. Patch-clamp recording 1
   Alasdair J. Gibb
   1. Introduction 1
   2. Principles 1
      Electrical considerations 1
      The nature of the glass–membrane seal 2
      Connecting the membrane patch to the electronics 4
      Solutions for patch clamping 5
   3. Patch-clamp recording configurations 5
      Basic sealing procedure 5
      Notes on the sealing procedure 6
      Cell-attached patch configuration 7
      Inside-out patch configuration 7
      Whole-cell recording configuration 8
      Perforated patch whole-cell recording 12
      Outside-out patch configuration 13
      Patch-clamp recording conventions 14
   4. Making patch pipettes 15
      Patch pipette glass 15
      Patch pipette pulling procedure 17
      Coating with Sylgard 18
      Pipette fire-polishing 19
   5. Building a patch-clamp set-up 20
      Patch-clamp amplifiers 20
      Patch-clamp amplifier headstages 21
      Oscilloscopes 22
      Amplifiers and filters 23
      Tape recorders and data storage 24
      Computers and on-line experimental control, data storage, and analysis 25
      Vibration isolation system 25
      Microscopes 26
      Micromanipulators 27
      Grounding and shielding the patch-clamp set-up 27
2. The measurement of the function of ion channels reconstituted into artificial membranes

Alan J. Williams

1. Introduction

2. The production of artificial phospholipid bilayers
   Bilayers formed by spreading phospholipid dispersions (painted bilayers)
   Bilayers formed from monolayers (folded bilayers and bilayers on patch pipettes)

3. Ion channel insertion into bilayers
   Channel insertion by vesicle fusion
   Channel orientation in the bilayer

4. Patch clamping channels in liposomes
   Freeze-thaw
   Dehydration–rehydration
   Patch clamping large liposomes

5. Monitoring current flow through ion channels
   Electronics
   Noise

6. General hints
   Cleaning the apparatus
   Solutions
   Changing solutions
   Agar bridges and silver–silver chloride electrodes

Acknowledgements

References
3. Concepts of single-channel analysis: inferring function from fluctuations

Guy W. J. Moss and Edward Moczydlowski

1. Introduction
   Single channels in practice and theory
   Basic considerations for recording and analysing data

2. Measurement of ionic selectivity
   What is selectivity?
   Continuum versus discrete-state models
   Classical definition of a permeability ratio

3. The rate-theory perspective on ion conduction
   A one-site channel compared to a one-site enzyme
   Multi-ion channels and ion-ion interactions

4. Probability distributions used to describe single-channel activity

5. Analysis of channel gating according to the Q-matrix formulation
   Channel gating can be described by a Markov process
   The probabilistic nature of ion channel gating
   Conditional probabilities and transition rates
   Derivation of the Q-matrix
   Relationship between conditional and macroscopic probability equations
   Eigenvalues and probability density functions of the Q-matrix
   Q-matrix analysis of a three-state scheme

Appendix 1: Alternative calculation of $A_i$
Appendix 2: A basic summary of matrix algebra
References

4. Assaying ion channels: design and practice

Michiki Kasai, Toru Ide, and William S. Agnew

1. Introduction

2. Ligand binding assays
   Introduction
   Theoretical considerations
   Practical guidelines for receptor assay protocols

3. Receptor assays
   Assay for inositol 1,4,5-trisphosphate receptors
   Assay for voltage-sensitive Na$^+$ channels using labelled tetrodotoxin
   Assay for voltage-sensitive Na$^+$ channels using radiolabelled STX
## Contents

4. Functional assay by bilayer reconstitution

References

5. Channel cloning, mutagenesis, and expression

Paul J. Whiting, Keith A. Wafford, Iris Pribilla, and Thomas Petri

1. Introduction

2. Isolation of cDNAs by hybridization screening of cDNA libraries
   - General principles
   - DNA probes for screening cDNA libraries
   - Screening of cDNA libraries
   - Obtaining full length cDNAs

3. Site-directed mutagenesis
   - General principles
   - Oligonucleotide-directed mutagenesis
   - PCR mutagenesis

4. Choice of expression system
   - Overview
   - *Xenopus* oocyte expression
   - Transiently transfected cells
   - Stably transfected cells
   - Baculovirus expression

5. *Xenopus* oocyte expression system
   - Overview
   - Preparation and injection of oocytes
   - Endogenous receptors and ion channels
   - Electrophysiological recording from *Xenopus* oocytes
   - Expression cloning

6. Transient and stable expression in mammalian cells
   - Transient expression
   - Stable expression

7. Baculovirus expression
   - Introduction
   - Construction of recombinant baculoviruses
   - Protein production

Acknowledgements

References
6. Antibodies as tools for the study of the structure and function of channel proteins

F. Anne Stephenson

1. Introduction 171
2. The choice of the antigen 172
   Bacterially derived fusion proteins 172
   Synthetic peptides 174
3. Antibody characterization 176
   Antibody production 176
4. Uses of antibodies 180
   Identification of the subunit complements of native channels 180
   Use of antibodies to map ligand binding sites and functional domains of proteins 185
   Immunocytochemical studies 188
5. Summary 188
Acknowledgements 189
References 189

7. Assembly, post-translational processing, and subcellular localization of ion channels

Neil S. Millar, Stephen J. Moss, and William N. Green

1. Introduction 191
   Scope of the chapter 191
2. Structural organization of ion channels 192
   Neurotransmitter-gated ion channels 192
   Voltage-gated calcium and sodium channels 193
   Voltage-gated potassium channels 193
   Other ion channels 193
3. Post-translational processing and folding 193
   Introduction 193
   Phosphorylation 194
   Glycosylation and fatty acylation 200
   Disulphide bond formation 202
   Protein folding 203
4. Subunit assembly 203
   Metabolic labelling of proteins expressed in mammalian cells 204
   Cell lysis and solubilization of ion channel proteins 205
   Immunoprecipitation 206
   Sucrose gradient centrifugation 208
   Overview of approaches to the study of subunit assembly 211
### Contents

5. Subcellular localization of ion channels  
   Surface expression of subunit combinations  
   Immunofluorescence microscopy  
6. Concluding remarks  
Acknowledgements  
References

8. Ion channels and signal transduction systems in plant and animal cells  
   *Ian McFadzean and Colin Brownlee*

1. Introduction  
2. Recording from plant cells  
   Special considerations for recording from plant cells  
   Voltage clamping plant cells  
   Patch clamping plant cells  
3. Measurement of cytosolic Ca\(^{2+}\)  
   Methods for measuring cytosolic Ca\(^{2+}\)  
   Use of fluorescent dyes  
4. Animal cells  
   The use of patch clamping to determine the involvement of a diffusible second messenger  
   Ligand-gated ion channels  
   G proteins: membrane-delimited pathways  
   Pathways involving soluble second messengers  
5. Conclusions  
References

9. Channel structure  
   *John B. C. Findlay and Derek Marsh*

1. Introduction  
2. General modelling principles  
   Topography  
   Conformation  
   ‘Sidedness’/orientation  
   Folding  
3. Spectroscopic characterization of channel structure and assembly  
   Fourier-transform infrared (FTIR) spectroscopy  
   Spin-label electron spin resonance (ESR) spectroscopy
