## Contents

Contributors ................................................................. xi
Preface ................................................................. xiii

1 Chaperonins: Introductory Perspective
   R. John Ellis
   I. Origins ............................................................. 2
   II. General Concept of Molecular Chaperones ...................... 8
   III. Definitions and Nomenclature .................................. 12
   IV. Functions of Chaperonins ....................................... 15
   V. Problems .......................................................... 17
       References ....................................................... 23

2 Evolutionary Relationships of Chaperonins
   Radhey S. Gupta
   I. Introduction ...................................................... 27
   II. Chaperonin 60 and Chaperonin 10 Gene Families ............... 28
   III. t-Complex Polypeptide 1 Gene Family .......................... 47
   IV. Evolutionary Relationship of t-Complex Polypeptide 1 and Chaperonin 60
       Gene Families and Origin of Eukaryotic Cells ................. 52
       References ....................................................... 57

3 Chaperonins of Photosynthetic Organisms
   Anthony A. Gatenby
   I. Introduction ...................................................... 65
   II. Chloroplast Chaperonins ......................................... 68
   III. Chaperonin 60 and Chaperonin 10 in Mitochondria from Angiosperms .... 79
   IV. Chaperonin 60 and Chaperonin 10 in Photosynthetic Prokaryotic
       Organisms ....................................................... 81
   V. Concluding Comments ........................................... 83
       References ....................................................... 85
# 4 Chaperonin-Mediated Folding and Assembly of Proteins in Mitochondria

*Thomas Langer and Walter Neupert*

<table>

</table>
7 Kinetic and Energetic Aspects of Chaperonin Function
Anthony R. Clarke and Peter A. Lund

I. Ground Rules of Chaperonin Behavior ............................................ 168
II. Avoidance of Dead Ends ............................................................... 180
III. Spontaneous Protein Folding ...................................................... 182
IV. Energy Transduction: Role of ATP in Chaperonin Activity .......... 184
V. Conformation of Bound Protein Substrates ................................. 195
VI. General Models of Chaperonin Action ........................................ 200
    References ................................................................................... 208

8 Role of Prokaryotic Chaperonins in Protein Folding
Jörg Martin, Mark Mayhew, and F.-Ulrich Hartl

I. Introduction ......................................................................................... 213
II. Pathway of Chaperone-Assisted Protein Folding ....................... 217
III. Mechanism of Chaperonin-Mediated Protein Folding ............. 221
IV. Conformational Properties of Chaperonin-Bound Proteins .......... 229
V. Role of Chaperonins in Oligomeric Protein Assembly .......... 233
VI. Chaperonin Function under Cellular Stress Conditions .......... 234
VII. Concluding Remarks ................................................................. 237
     References ................................................................................... 237

9 Chaperonin Structure and Conformational Changes
Helen R. Saibil

I. Introduction: Methods for Structural Studies of Chaperonins ..... 246
II. Arrangement of Subunit Domains in Chaperonin 60 Oligomer .... 249
III. Crystal Structures of GroEL and GroES ................................. 252
IV. Conformational Changes in GroEL and Its Complexes Studied by Cryo-electron Microscopy ..................................................... 257
V. Molecular Basis of Chaperonin Function ..................................... 261
     References ................................................................................... 263

10 Immunological Aspects of Chaperonins
Anthony R. M. Coates

I. Innate Immunity: Direct Effect of Chaperonins on Phagocytes .... 268
II. Adaptive Immunity: Nature of Immune Response to Chaperonins .... 273
III. Significance of Immune Response ............................................... 282
IV. Conclusion ..................................................................................... 288
     References ................................................................................... 289

Index ........................................................................................................ 297
