CONTENTS

1 Introduction
   1.1 The evidence for intermolecular forces
      1.1.1 Magnitudes
      2
   1.2 Classification of intermolecular forces
      4
   1.3 Potential energy surfaces
      5
   1.4 Coordinate systems
      7
      1.4.1 Internal coordinates
      10

2 Molecules in Electrostatic Fields
   2.1 Molecular properties: multipole moments
      12
      2.1.1 Cartesian definition
      12
      2.1.2 Spherical tensor definition
      17
   2.2 The energy of a molecule in a non-uniform electric field
      18
   2.3 Polarizabilities
      21
      2.3.1 Units and magnitudes
      24
   2.4 Hyperpolarizabilities
      25
   2.5 The response to oscillating electric fields
      26
   2.6 Symmetry properties of the multipole moments and polarizabilities
      28
   2.7 Change of origin
      32

3 Electrostatic Interactions between Molecules
   3.1 The electric field of a molecule
      36
   3.2 Electrostatic interaction between molecules
      38
      3.2.1 Explicit formulæ
      39
   3.3 Spherical tensor formulation
      41
   3.4 Examples
      45
      3.4.1 The dipole–dipole interaction
      45
      3.4.2 The quadrupole–quadrupole interaction
      45
      3.4.3 Competition between electrostatic terms
      48

4 Perturbation Theory of Intermolecular Forces at Long Range
   4.1 Introduction
      50
   4.2 The induction energy
      53
      4.2.1 Non-additivity of the induction energy
      54
      4.2.2 Multipole expansion of the induction energy
      55
   4.3 The dispersion energy
      56
      4.3.1 Drude model
      56
      4.3.2 Quantum-mechanical formulation
      58
CONTENTS

4.3.3 Spherical tensor formulation 61
4.3.4 Numerical values 62

5  Ab Initio Methods 64
5.1 Introduction 64
5.2 Basis sets 65
5.3 The supermolecule method 67
5.4 Electron correlation and intermolecular interactions 67
5.5 The variation principle 68
5.5.1 Basis set superposition error 70
5.6 Electron correlation and size consistency 72
5.7 Density functional theory 74
5.8 Semi-empirical methods 75
5.9 Choice of geometries 76
5.10 Morokuma analysis 76

6  Perturbation Theory of Intermolecular Forces at Short Range 79
6.1 Introduction 79
6.1.1 Short-range perturbation theory 82
6.2 Symmetric perturbation methods 85
6.2.1 Expansion in powers of overlap 85
6.2.2 Orthogonalization of the antisymmetrized-product basis 86
6.2.3 Non-hermitian zeroth-order Hamiltonian 86
6.2.4 Biorthogonal functions 88
6.2.5 Non-orthogonal perturbation theory 88
6.2.6 Expansion in orders of exchange 89
6.3 Symmetry-adapted perturbation theories 90
6.3.1 Iterative symmetry-forcing procedures 90
6.3.2 The treatment of electron correlation 93
6.4 The first-order energy at short range 94
6.4.1 The electrostatic energy at short range: penetration 94
6.4.2 The exchange–repulsion energy 96
6.5 The second-order energy at short range 96
6.5.1 Damping functions 100
6.6 Charge transfer and basis set superposition error 102

7  Distributed Multipole Expansions 105
7.1 Convergence of the multipole expansion 105
7.2 Distributed multipole expansions 106
7.2.1 Empirical models 107
7.3 Distributed multipole analysis 107
7.3.1 Allocation algorithms for distributed multipole analysis 109

11.5.1 Conformational dependence of potential parameters 174
11.6 A case study: potentials for water 175
11.7 Calculation of energy derivatives 178
  11.7.1 Derivatives of the electrostatic energy 178
  11.7.2 Second derivatives 180
  11.7.3 Repulsion and dispersion 181
  11.7.4 Induction 183

12 Sources of Experimental Data 185
12.1 Properties of individual molecules 185
  12.1.1 Multipole moments 185
  12.1.2 Polarizabilities 187
12.2 Experimental determination of intermolecular potentials from
  bulk properties 189
  12.2.1 The virial coefficient 189
  12.2.2 Transport coefficients 191
12.3 Spectroscopic methods 192
  12.3.1 Rotational Rydberg–Klein–Rees method 193
  12.3.2 Expansion in an angular basis 194
  12.3.3 Discrete variable representation 197
  12.3.4 Diffusion Monte Carlo 198
12.4 Molecular beam scattering 200
12.5 Measurements on liquids and solids 204
  12.5.1 Crystals 204
  12.5.2 Neutron and X-ray scattering 205
12.6 Simulation methods 205

Appendices

A Cartesian Tensors 208
A.1 Basic definitions 208
  A.1.1 Isotropic tensors 210
  A.1.2 Polar and axial tensors 210

B Spherical Tensors 212
B.1 Spherical harmonics 212
B.2 Rotations of the coordinate system 214
B.3 Spherical tensors 215
B.4 Coupling of wavefunctions and spherical tensors 216
  B.4.1 Wigner 3j symbols 217

C Introduction to Perturbation Theory 218
C.1 Non-degenerate perturbation theory 218
  C.1.1 Rayleigh–Schrödinger perturbation theory 219
  C.1.2 Unsöld’s average-energy approximation 220
C.2 The resolvent 221
