Preface
Conference Participants
Introductory Remarks

Diatomie Molecules: Exact Solutions of HF Equations
Jacek Kobus
1. Introduction
2. FD HF Method Development
3. The Calibration of Basis Sets
4. Full CI with Numerical Orbitals
5. One-Electron Diatomic States
6. Future Developments
7. Summary
8. Acknowledgments
References

Perturbation Theory for Low-Spin Open-Shell States
Xiangzhu Li and Josef Paldus
1. Introduction
2. Basic Formalism
3. Møller-Plesset UGA Based PT
4. Epstein-Nesbet UGA Based PT
5. Applications
6. Conclusions
7. Acknowledgments
References

The Contracted Schrödinger Equation: Some Results
C. Valdemoro, L. M. Tel, and E. Pérez-Romero
1. Introduction
2. Theoretical Outline
3. RDM's Approximations
4. Computational Details
# CONTENTS

**Determining the Shapes of Molecular Electronic Bands from Their Intensity Distribution Moments**  
Dorota Bielinska-Waz and Jacek Karwowski

1. Introduction 160  
2. General Theory 162  
3. One-Dimensional Problems 163  
4. Results 165  
5. Summary 168  
6. Acknowledgments 168  
References 168

**Convergence of Symmetry-Adapted Perturbation Theory for the Interaction between Helium Atoms and between a Hydrogen Molecule and a Helium Atom**  
Tatiana Korona, Robert Moszynski, Bogumil Jeziorki

1. Introduction 172  
2. Method 173  
3. Computational Details 177  
4. Numerical Results and Discussion 178  
References 186

**Electron Affinity of SF<sub>6</sub>**  
M. Klobukowski, G. H. F. Diercksen, and J. M. García de la Vega

1. Introduction 190  
2. Calculations Using Standard Basis Sets 192  
3. Development of Extended Basis Sets 194  
4. Calculations with Optimized Basis Sets 197  
5. Summary 199  
6. Acknowledgments 200  
References 200

**The Oxonium Rydberg Radical: Electronic Transitions**  
C. Lavin and I. Martin

1. Introduction 206  
2. Computational Procedure 208  
3. Results and Analysis 211  
4. Concluding Remarks 216

**An ab initio Study of Four-Membered Rings. Boranes HBXYBH;**
(X, Y = C, N, O)
Borislava Batandjieva, Ingrid Miadoková, and Ivan Černušák

- 1. Introduction
- 2. Computational Details
- 3. Results and Discussion
- 4. Summary
- 5. Acknowledgments

**References**

**SiN₂ and SiN₄ Molecules: An ab Initio Study of Molecular and**
**Electronic Structure, Stability, and IR Activity**
Rudolf Janoschek

- 1. Introduction
- 2. Computational Methods
- 3. Computational Results
- 4. Conclusions

**References**

**A Sternheimer-like Response Property of the Bromine Molecule:**
**Electric Field Dependence of the Br Field Gradient**
P. W. Fowler, S. A. Peebles, and A. C. Legon

- 1. Introduction
- 2. Ab Initio Calculations on Br₂
- 3. Ab Initio Calculations on H₃N⋯Br₂
- 4. The Townes-Dailey Model
- 5. An Empirical Value for the Response Tensor gzzₓ (Br)

**References**

**Molecular Properties of Boron-Coinage Metal Dimers: BCu,**
**BAg, BAu**
Maria Barysz and Miroslav Urban

- 1. Introduction
CONTENTS

2. Basis Sets and Computational Methods  259
3. Results and Discussion  262
4. Conclusions  269
5. Acknowledgments  270
   References  270

Decades of Theoretical Work on Protonated Hydrates
E. Kochanski, R. Kelterbaum, S. Klein, M. M. Rohmer, and A. Rahmouni

1. Introduction  274
2. Historical Evolution of Theoretical Studies on PH  274
3. Theoretical Treatments and Techniques  275
4. The Results  280
5. Conclusion  286
   References  286

Density Functional Theory: A Useful Tool for the Study of Free Radicals
Oscar N. Ventura, Martina Kieninger, and Kenneth Irving

1. Introduction  294
2. Geometrical Structure of Simple Radicals  297
3. Thermodynamics  299
4. Reactivity  301
5. Conclusions  306
6. Acknowledgments  306
   References  306

Guesses—Hunches—Formulae—Discoveries
B. G. Wybourne

1. Introduction  312
2. Spinors and the Rotation Group  312
3. Reduced Notation and the Symmetric Group  313
4. Kronecker Products for Two-Row Shapes  314
5. $n$-Noninteracting Particles in a Harmonic Oscillator Potential  315
6. Concluding Remarks  317
7. Acknowledgments  317
   References  317
Applying Artificial Intelligence in Physical Chemistry
F. J. Smith, M. Sullivan, J. Collis, and S. Loughlin

1. Introduction 320
2. Nature of Knowledge 321
3. Related Work 323
4. Object Oriented Knowledge Representation 323
5. Manipulation of Data 325
6. Example of AI Technique 325
7. Application to Molecular Computations 326
References 327

Artificial Intelligence Support for Computational Chemistry
Włodzisław Duch

1. Introduction 330
2. What Can AI Offer? 332
3. Feature Space Mapping 336
4. Classification of Computational Chemistry Results 339
5. Summary 342
References 342

Abstract Data Types in the Construction of Knowledge-Based Quantum Chemistry Software
P. L. Kilpatrick and N. S. Scott

1. Introduction 346
2. Abstract Data Types and Production Rules 346
3. An ADT and Its Associated Production Rule Set for a Simple Configuration Interaction Expansion Problem 350
4. Summary 358
5. Acknowledgments 359
References 359
