Recirculating Aquaculture ^{2nd Edition}

By

*MICHAEL B. TIMMONS AND
JAMES M. EBELING*

Cayuga Aqua Ventures© 2010

NRAC Publication No. 401-2010

TABLE OF CONTENTS

Foreword	i
Acknowledgements	v

Chapter 1: Introduction to Recirculating Aquaculture Technology

1.0	Background	1
1.1	The Optimistic View	2
1.2	Recirculating Aquaculture Systems (RAS).....	2
1.3	RAS Advantages	6
1.4	World Market Needs	10
1.5	Market Dynamics	11
1.6	Overview of Recirculating Aquaculture Systems (RAS).....	13
1.7	Can RAS Compete	15
1.8	Is Aquaculture For You	22
1.9	Some Quick Case Histories	23
1.10	History Lesson on Failures	24
1.11	Interactions Between Objectives, Resources, Business Strategy, and Design.....	26
1.12	Terminology and nomenclature.....	28
1.13	Websites for Reference.....	30
1.14	Summary and the Cornell Short Course	35
1.15	References	37

Chapter 2: Water Quality

2.0	Introduction	39
2.1	Physical Properties	40
2.2	Water Quantity Requirements	42
2.3	Water Sources.....	44
2.4	Water Quality Standards.....	47
2.5	Water Quality Parameters.....	50
2.6	Measurements.....	66

Chapter 3: Mass Balances, Loading Rates and Fish Growth

- 3.0 Introduction79
- 3.1 Production Terms87
- 3.2 Water Quality Design Targets88
- 3.3 Fish Growth95
- 3.4 Design Examples101
- 3.5 References115

Chapter 4: Culture Units

- 4.0 Introduction119
- 4.1 Culture Tanks120
- 4.2 Stocking Density123
- 4.3 Design Examples127
- 4.4 Culture Tank Engineering129
- 4.5 Tank Water Velocities130
- 4.6 Round Tanks134
- 4.7 Cornell Dual-Drain Design144
- 4.8 Raceways151
- 4.9 Carrying Capacity Issues163
- 4.10 Stock Management Issues165
- 4.11 Scale Issues166
- 4.12 Mechanisms To Remove Dead Fish167
- 4.13 References170

Chapter 5: Solids Capture

- 5.0 Overview177
- 5.1 Solids Balance180
- 5.2 Basic Design Parameters for Round Tanks182
- 5.3 Solids Generation183
- 5.4 TSS Physical Characteristics183
- 5.5 Removal Mechanisms185
- 5.6 Design Example – Solids Capture224
- 5.7 References234

Chapter 6: Waste Management & Disposal

6.0	Introduction	245
6.1	EPA Effluent Limitation Guidelines - 2004	247
6.2	Waste Management	250
6.3	Waste Characteristics	251
6.4	Waste Management Overview	253
6.5	Storage, Thickening, And Stabilization.....	253
6.6	Utilization/Disposal.....	276
6.7	Design Example – GeoBags.....	279
6.8	References	283

Chapter 7: Biofiltration

7.0	Introduction	293
7.1	Nitrification (Autotrophic Bacteria).....	293
7.2	Nitrification (Microbial Floc).....	300
7.3	Impact of Water Quality Factors on Nitrification	303
7.4	Biofilters.....	309
7.5	References	332

Chapter 8: Biofilter Design

8.0	Introduction	337
8.1	Generalized Engineering Considerations	338
8.2	Design Parameters: Where do you start?.....	340
8.3	Design Example: Biofiltration.....	347
8.4	Design Example: Trickling Tower	348
8.5	Design Example: RBC	353
8.6	Design Example – Floating Bead Biofilter.....	354
8.7	Basic Design Concepts: Fluidized-Bed Sand Biofilter.....	358
8.8	Design Example: Microbead Biofilter.....	378
8.9	Design Example: Moving Bed BioReactor	380
8.10	References	382

Chapter 9: Denitrification

9.0	Introduction	387
9.1	Background	388
9.2	Unit Processes for Denitrification	392
9.3	Factors Controlling Denitrification	396
9.4	Effect of Denitrification on Alkalinity	400
9.5	Effect of Denitrification on Phosphate Removal.....	402
9.6	Effluent versus On-line Treatment	403
9.7	Types of Reactors	404
9.8	MBBR Processes for Denitrification	407
9.9	Design of Denitrification Reactors	410
9.10	Design Example	412
9.11	References	417

Chapter 10: Gas Transfer

10.0	Introduction	425
10.1	Dissolved Gases – Fundamentals	426
10.2	Gas Transfer	436
10.3	Gas Transfer Options.....	441
10.4	Degassing: Carbon Dioxide (Nitrogen).....	456
10.5	Design Example – Aeration/Oxygenation.....	466
10.6	References	467

Chapter 11: Ozonation and UV-Irradiation

11.0	Introduction	471
11.1	UV Irradiation	471
11.2	Ozonation	474
11.3	Factor Influencing Disinfection Efficiency	489
11.4	Aquaculture Wastewater Characterization	493
11.5	Inactivation Of Fish Pathogens	494
11.6	Other Methods of Disinfection.....	501
11.7	Design Example Influent Treatment	505
11.8	Conclusions	508
11.9	References	509

Chapter 12: Fluid Mechanics and Pumps

12.0	Fluid Mechanics	517
12.1	Frictional Losses.....	521
12.2	Fitting Losses	526
12.3	Design Example: Head Loss	533
12.4	Measurement of Flow.....	536
12.5	Pumps and Pumping.....	544
12.6	Airlift Pumps	553
12.7	Design Example - Circulation	556
12.8	References	561

Chapter 13: System Monitoring and Control

13.0	Introduction	563
13.1	Parameters to Monitor	564
13.2	Monitoring Sensors and Equipment Options.....	570
13.3	Automatic Phone Dialers.....	576
13.4	Backups Systems are not an Option!.....	578
13.5	Computer Based Systems	581
13.6	Design Example – Monitoring	584
13.7	System Design and Maintenance.....	585
13.8	Construction Hints.....	586

Chapter 14: Building Environmental Control

14.0	Introduction	589
14.1	Heat Transfer.....	591
14.2	Air Quality Control	594
14.3	Building Considerations	599

Chapter 15: System Management and Operations

15.0	Introduction and Site selection	603
15.1	Backup Systems	604
15.2	Laboratory Facilities.....	611
15.3	Quarantine Facilities.....	613
15.4	Waste Management	613

- 15.5 Storage—Feed and Chemicals614
- 15.6 Fish Product Handling615
- 15.7 Transporting Live Fish617
- 15.8 Purging and Off-Flavor640
- 15.9 Post Harvest Handling.....641
- 15.10 Feed Storage643
- 15.11 Handling Fish645
- 15.12 Labor646
- 15.13 Access.....647
- 15.14 Operations647
- 15.15 Miscellaneous Operations655
- 15.16 Record Keeping and Maintenance.....656
- 15.17 How to Collect, Analyze & Interpret Data661
- 15.18 Care and Use of Laboratory Animals662
- 15.19 References662

Chapter 16: Fish Health Management

- 16.0 Biosecurity.....663
- 16.1 Practices to Reduce the Risk of Pathogen Introduction665
- 16.2 Practices to Reduce Pathogen Spread.....671
- 16.3 Reducing Susceptibility to Infection and Disease674
- 16.4 Monitoring and Surveillance675
- 16.5 Biosecurity Check679
- 16.6 Diagnosis683
- 16.7 Treatment.....692
- 16.8 Aquaculture Chemotherapeutics696
- 16.9 Treatment Calculations.....701
- 16.10 Fish Disease Diagnostic Services705
- 16.11 References706

Chapter 17: Economic Realities and Management Issues

- 17.0 Introduction707
- 17.1 Case History of Fingerlakes Aquaculture (FLA) LLC707
- 17.2 Lessons Learned709

17.3	Investment Choices	713
17.4	Species Selection	714
17.5	Competitiveness of RAS	715
17.6	Infrastructure & Capitalization	716
17.7	Scale Effects and Risk	725
17.8	Labor Requirements	728
17.9	Predicted Costs of Production	729
17.10	Predicted Costs of RAS Produced Tilapia	735
17.11	Economic Comparison to Broilers and Catfish	739
17.12	References	742

Chapter 18: Fish Nutrition and Feeds

18.0	Introduction	743
18.1	Feed Management	743
18.2	Selection	745
18.3	Growth Performance	747
18.4	Feed Quality	748
18.5	Physical Characteristics	749
18.6	Practical Feed Formulation	751
18.7	Important Aspects Of Aquaculture Feeds	758
18.8	Physiological Relationships	762
18.9	Water Chemistry And Dietary Needs	765
18.10	Functional Anatomy of Digestion	767
18.11	Minerals	770
18.12	Vitamins	773
18.13	Feedstuff Selection	782
18.14	Feedstuff Digestibility	791
18.15	Pelleted, Expanded and Extruded Feeds	796
18.16	Floating Feeds	799
18.17	Summary	801
18.18	References	801

Chapter 19: Aquaponics: Integrating Fish and Plant Culture

19.0	Introduction	807
19.1	System Design.....	810
19.2	Fish Production.....	815
19.3	Solids.....	821
19.4	Biofiltration	826
19.5	Hydroponic Subsystems	830
19.6	Sump.....	834
19.7	Construction Materials	835
19.8	Component Ratios	836
19.9	Plant Growth Requirements	839
19.10	Nutrient Dynamics	841
19.11	Vegetable Selection	846
19.12	Crop Production Systems	850
19.13	Pest and Disease Control	850
19.14	Approaches to System Design.....	852
19.15	Economics	858
19.16	Prospects For The Future.....	860
19.17	References	861

Appendix

Appendix Directory	865
--------------------------	-----

Tables

A-1	Conversion Factors For Commonly Used Terms in Aquaculture	867
A-2	Fish Health Conversion Factors.....	874
A-3	Broad List of Conversion Factors: Inch:Pound (IP) to System International (SI).....	875
A-4	Physical Properties of Water	877
A-5	Percentage of Free Ammonia (as NH_3) in Freshwater at Varying pH and Water Temperatures.....	878
A-6	Dissolved Oxygen (mg O_2 per Liter, ppm) at Saturation in Freshwater, Brackish Water, and Seawater at Different Temperatures	879
A-7	Hardness Conversion to Other Units of Measure	880

A-8	Standard U.S. Atmospheric Pressure at Different Altitudes....	880
A-9	Alkalinity Supplement Properties.....	881
A-10	Opening Sizes of U.S. Sieve Series Designation Number.....	882
A-11	Dry Air Components	882
A-12	Solubility of Four Major Gases in Water.....	882
A-13	Maximum and Minimum Monthly Average Outside Temperatures for Selected USA Locations in Degrees °F.....	883
A-14	Unit Area Thermal Resistance's (R-Values) of Typical Building Construction and Insulation Materials	884
A-15	Allowable Concentrations of Carbon Dioxide at Standard Temperature and Pressure to the Nearest 25 ppm	885
A-16	Valve Basics and Selection Tips.....	886
A-17	Plastic Properties for Various Types of Pipes	887
A-18	Size and Properties of PVC Pipe Schedule 40 and 80.....	888
A-19	PVC Pipe Friction Chart for Pipe and Length Loss for Schedule 40.....	889
A-20	PVC Pipe Friction Chart for Pipe and Length Loss for Schedule 80.....	890
A-21	Tank Volumes for Various Depths and Diameters	891
A-22	Temperature Equivalents Between Celsius and Fahrenheit	892
A-23	Electrical Measurements.....	893
A-24	Maximum length of wire in feet for 2% maximum voltage drop. If voltage drop is greater than 2%, efficiency of the equipment in the circuit is severely decreased and the life of the equipment will be decreased	894
A-25	Current carrying capacity of hard-usage flexible cords (Type S, ST, SO, STO, SJ, SJT, SJO, SJTO).....	895
A-26	Full load currents in amperes for single phase alternating-current motors	895
A-27	Full load currents in amperes for three phase squirrel cage and wound rotor motors	895
A-28	Recommended pipe sizes for standard air (0.075 lbs/ft ³) for three pipe air velocities.....	896
A-29	Area Under the Normal Distribution Curve	897
A-30	Percentage Points of the Student's t-Distribution.....	899

Supplemental Information

Determining Statistical Significance.....	900
Factors to Investigate Prior to Site Selection.....	905
Calculating Volume of Round Tanks	906
Laboratory Safety Procedures.....	908
Information Resources for Aquaculture.....	915
Brief Description of Software.....	922

Glossary

Definition of Terms Used in Aquaculture	925
Summary List of Symbols	929
Abbreviations/Units	935

Index	939
