

Numerical Analysis of Spectral Methods:

Theory and
Applications

DAVID GOTTLIEB

Contents

Preface	v
Section 1	
INTRODUCTION	1
Section 2	
SPECTRAL METHODS	7
Section 3	
SURVEY OF APPROXIMATION THEORY	21
Section 4	
REVIEW OF CONVERGENCE THEORY	47
Section 5	
ALGEBRAIC STABILITY	55
Section 6	
SPECTRAL METHODS USING FOURIER SERIES	61
Section 7	
APPLICATIONS OF ALGEBRAIC-STABILITY ANALYSIS	79
Section 8	
CONSTANT COEFFICIENT HYPERBOLIC EQUATIONS	89
Section 9	
TIME DIFFERENCING	103
Section 10	
EFFICIENT IMPLEMENTATION OF SPECTRAL METHODS	117
Section 11	
NUMERICAL RESULTS FOR HYPERBOLIC PROBLEMS	121
Section 12	
ADVECTION-DIFFUSION EQUATION	139
Section 13	
MODELS OF INCOMPRESSIBLE FLUID DYNAMICS	143
Section 14	
MISCELLANEOUS APPLICATIONS OF SPECTRAL METHODS	149
Section 15	
SURVEY OF SPECTRAL METHODS AND APPLICATIONS	155
Appendix	
PROPERTIES OF CHEBYSHEV POLYNOMIAL EXPANSIONS ..	159
PROPERTIES OF LEGENDRE POLYNOMIAL EXPANSIONS ...	162
References	165
Bibliography	166
Index	170
