

Arizona's Industrial Rock and Mineral Resources—Workshop Proceedings

E.W. TOOKER, Compiler-Editor

Prepared in cooperation with the Arizona Geological Survey

Presentations and discussions at a workshop held May 17–18, 1988, in Tempe, Ariz., on problems encountered in, and recommendations for improving, current and potential industrial rock and mineral resource availability in Arizona

U.S. GEOLOGICAL SURVEY BULLETIN 1905

UB/TIB Hannover 89
103 682 716

ZS 414(1905)

CONTENTS

Introduction, by E.W. Tooker	1
Industry overview, by H.W. Peirce	5
Introduction	5
Geologic occurrence	5
Cement and lime	6
Clay	6
Gypsum	7
Volcanic materials	9
Saline deposits	9
Stone products	9
Sand and gravel	9
Other industrial-mineral resources	10
Conclusions	10
Potential growth for the industry, by T.H. Eyde	11
Introduction	11
The marketing factor	11
Resource specifications	12
Environmental and political factors	12
Conclusions	13
Critical problem areas, E.W. Tooker, moderator	15
Effective data access and management	15
Arizona Geological Survey and U.S. Geological Survey, by S.J. Reynolds	15
U.S. Bureau of Mines, by A.F. Barsotti	15
Arizona Department of Mines and Mineral Resources, by K.A. Phillips	16
Participants' discussions of the data problem	16
Unified computer data system	16
Other available sources of resource data	17
Upgrading existing data	18
Summary	18
Analytical-laboratory and industrial-testing capability and availability	18
Industry viewpoint, by D.T. Eyde	18
U.S. Bureau of Mines capabilities, by K.G. Broadhead	19
U.S. Geological Survey capabilities, by P.K. Theobald, Jr.	19
Participants' discussions of the analysis and testing problem	20
Availability of analysis or testing services	20
Setting standards and specifications	21
Recognition of "future" resource materials	22
Improved testing and specification procedures	23
Conclusions	24
Land access and availability	24
U.S. Bureau of Indian Affairs, by James Crowther	24
U.S. Bureau of Land Management, by L.P. Bauer	25
Arizona State Land Department, by G.D. Slusher	27
Participants' discussions of land problems	27

Critical problem areas— <i>Continued</i>	
Land access and availability— <i>Continued</i>	
Participants' discussions of land problems— <i>Continued</i>	
Federal lands	27
State lands	28
Geotechnical research applications, M.P. Foose, moderator	29
Applications of geophysical research, by J.K. Crowley	29
Gamma-ray spectroscopy	29
Electromagnetic systems	29
Spectral reflectance	29
Participants' discussions of geophysical research	30
Applications of geochemical research	30
Geochemical exploration technology, by W.E. Dean	30
Direct geochemical tools for industrial-minerals exploration, by P.K. Theobald, Jr.	31
Participants' discussions of geochemical research	32
Applications of geologic research	33
Concealed resources in the Basin and Range province, by J.C. Dohrenwend	33
Neotectonic domains	34
Thematic mapping	36
New scientific and technical data useful in the development of resource materials, by M.F. Sheridan	36
Centralized data base	36
Thematic-mapping	36
Establishing resource criteria	37
Expanding the application of existing technology	37
Exploration models	37
Participants' discussions of geologic research	37
Neotectonic domains	37
Thematic mapping	38
Geographic Information Systems	38
Conclusions	39
Application of resource-occurrence models	39
Industrial-rock- and mineral-resource-occurrence models, by G.J. Orris and J.D. Bliss	39
Introduction	39
Resource assessments	39
The three-part method	40
Models applicable to industrial minerals	40
Spatial models	42
Summary	43
Geologic model of a Cenozoic basin in Arizona, by J.D. Nations and W.D.R. Ranney	44
Participants' discussions of resource models	48
Resource-occurrence models	48
Geologic models	51
Meeting information needs, L.D. Fellows, moderator	55
A legislative point of view	55
Current political realities for the resource industry, by Senator Doug Todd	55
Introduction	55
Impact of legislation on resources	55
Impact of voters on legislators	56
The political facts	56

Meeting information needs—*Continued*

Industry needs for data and the results of applied research, by B.N. Watson	56
Data needs	57
Applied research needs	58
Legislative needs	59
Participants' discussions of industry needs	59
State and Federal Government needs	60
State land-management needs, by M.J. Rice	60
Participants' discussions of State land-management needs	60
State environmental-quality needs, by Debra Daniel	61
Participants' discussions of environmental-quality needs	61
Federal land-management needs, by L.P. Bauer	62
Participants' discussions of Federal land-management needs	63
Geologic data and research needs of the Indian tribes, by James Crowther	65
Participants' discussions of Indian tribal needs	65
Local Government needs for urban land-use planning and zoning, by J.S. Perry	65
Participants' discussions of local-planning needs	68
Summary comments and recommendations, T.H. Eyde, moderator	71
Introduction	71
Industry comments, by B.N. Watson	71
Federal land-management agency comments, by L.P. Bauer	72
State land-management agency comments, by M.J. Rice	72
Academia comments, by M.F. Sheridan	72
Recommendations of the participants, E.W. Tooker, compiler	73
Data acquisition and management	73
Resource analysis and testing	74
Land-availability and permitting information	74
Geotechnical research	75
Meeting the need for resource information	75
Closing comments, by G.H. Allcott	76
References cited	77
Appendixes	
1. Program for the 1988 Industrial Rock and Mineral Resources Workshop	83
2. Partial list of analytical and testing laboratories	86
3. Indian agency and tribal-council officials, Phoenix area	87
4. General requirements for Indian mineral-resource development	88
5. U.S. Bureau of Land Management mining-claim reports	89
6. U.S. Forest Service's proposed resource classification	92

FIGURES

1. Chart showing some industrial rock and mineral products and their uses 2
2. Chart showing production history of nonmetallic minerals in Arizona, 1895–1988 6
3. Map of Arizona, showing geologic provinces, locations of major industrial-minerals operations, and some undeveloped deposits 7
4. Chart showing distribution of nonmetallic rocks and minerals in Arizona by age and physiographic-geologic subdivision 8
5. Map showing U.S. Bureau of Land Management areas in the conterminous United States 26

6. Bar chart showing number of active mining claims in the United States 27
7. Map of part of the Tonopah 1° by 2° quadrangle, Nev., showing structural configuration of Big Smoky, Monitor, and Little Fish Lake valleys 35
8. Descriptive model for bedded barite deposits 41
- 9-14. Plots showing:
 9. Grade-tonnage model for bedded barite deposits 42
 10. Grade-tonnage models for disseminated flake and amorphous graphite deposits 43
 11. Contained-materials model for feldspar in pegmatite deposits 44
 12. Contained-materials model for travertine-marl in deposits along streams in Virginia 44
 13. Contained-materials model for diamonds in placers 44
 14. Spatial model for bedded barite deposits in the Slaven Chert, given tracts (cells) of different sizes 44
15. Physiographic diagram of Arizona, showing Miocene to Holocene topographic features, major drainages, and locations of major cities 46
16. Chart showing chronology of Tertiary rocks in Arizona 47
17. Sketch map of Verde Valley, showing outcrop limits of the Miocene to Pliocene Verde Formation and Tertiary sedimentary rocks older than the Verde 49
18. Axial cross section in the Verde Basin, showing facies relations in the Verde Formation 50
19. Cross section across southeast end of the Verde Basin, showing facies relations in the Verde Formation 51
20. Axial cross section in the Tonto Basin, showing basin-fill and facies relations of Cenozoic rocks 52
