CONTENTS

FOREWORD	5
KURZFASSUNG	7
ABSTRACT	9
1. INTRODUCTION	11
2. THE ANTARCTIC ICE SHEET IN THE GLOBAL CLIMATE SYSTEM	16
2.1. Configuration and flow	16
2.1.1. Bedrock	16
2.1.2. Area and volume	20
2.1.3. East Antarctic ice sheet	21
2.1.4. West Antarctic ice sheet	22
2.1.5. Ice shelves	24
2.1.6. Antarctic Peninsula	26
2.2. Climate of the Antarctic	27
2.2.1. Temperature regime	27
2.2.2. General circulation and surface winds	28
2.2.3. Accumulation regime	30
2.3. Interaction with the environment: basic mechanisms	32
2.3.1. Impact of the ice sheet on climate	32
2.3.2. Ice sheet response modes to changes in environmental conditions	36
2.4. Instability mechanisms	40
2.4.1. West Antarctic ice sheet grounding line instability	40
2.4.2. Large-scale surging	44
2.4.3. Creep instability	46
3. GLACIAL HISTORY	48
3.1. Inception and growth	48
3.1.1. The environmental record	48
3.1.2. Causes of Antarctic glaciation	53
3.1.3. Models for ice sheet growth	56
3.2. Fluctuations of the ice sheet since the Pliocene	58

TABLE OF CONTENTS

3.2.1. The 'Queen Maud' maximum	58
3.2.2. Further Plio-Pleistocene history	61
3.3. The last glacial cycle	65
3.3.1. The Last Interglacial	65
3.3.2. The Last Glacial Maximum	66
3.3.2.1. CLIMAP reconstruction	67
3.3.2.2. data acquired since CLIMAP	69
3.3.3. Holocene retreat	74
3.3.4. Present evolution	76
 4. THE ICE SHEET MODEL	 79
4.1. Statement of the problem	79
4.2. Previous modelling studies	82
4.2.1. Thermodynamic models	82
4.2.2. Dynamic ice flow models	82
4.2.3. Thermomechanic models	83
4.2.4. Antarctic models	84
4.3. Structure of the Huybrechts model	87
4.4. Formulation of the ice flow	89
4.4.1. General force balance and flow law	90
4.4.2. Grounded ice	93
4.4.2.1. ice deformation	93
4.4.2.2. basal sliding	95
4.4.2.3. complete velocity field	96
4.4.3. Ice shelf	97
4.4.3.1. boundary conditions	99
4.4.4. Stress transition zone at the grounding line	100
4.5. Heat transfer	103
4.5.1. Ice temperature	104
4.5.2. Boundary conditions	105
4.5.3. Rock temperature	107
4.6. Isostatic bed adjustment	109
4.7. Numerical methods	113
4.7.1. Numerical grid	114
4.7.2. Solution of the continuity equation: ADI scheme	118
4.7.3. Determination of the ice mass fluxes	123
4.7.3.1. ice sheet	123

TABLE OF CONTENTS

4.7.3.2. ice shelf: point relaxation scheme	124
4.7.3.3. grounding zone	126
4.7.4. Thermodynamic equation	127
4.7.5. Bedrock adjustment equation	128
4.8. Data sets and model forcing	128
4.8.1. Geometric model input	128
4.8.2. Climatic model input	129
4.8.3. Model forcing during the last glacial-interglacial cycle	134
4.8.3.1. temperature	134
4.8.3.2. sea level	136
4.9. List of symbols	138
4.9.1. Constants	138
4.9.2. Variables	138
5. BASIC SENSITIVITY EXPERIMENTS WITH FIXED GROUNDING LINE	140
5.1. Experimental setup	140
5.2. Results	141
5.2.1. The present reference state	141
5.2.2. Effect of basal sliding	146
5.2.3. Effect of geothermal heat flux	148
5.2.4. Role of flow-temperature coupling	149
5.2.4.1. general effects	149
5.2.4.2. experimental results	152
5.2.5. Response to a complete glacial-interglacial cycle	156
5.3. Summary	160
6. SENSITIVITY EXPERIMENTS ON THE GLACIAL-INTERGLACIAL CONTRAST	164
6.1. Experimental setup	164
6.2. Results	165
6.2.1. Interglacial 'steady state' reference run	165
6.2.2. Effect of changes in environmental conditions	167
6.2.2.1. ice sheet geometries	168
6.2.2.2. temperature distributions	170
6.2.2.3. response time scales	172
6.2.3. Comparison with previous studies	175

TABLE OF CONTENTS

6.3. Summary	176
7. MODELLING THE LAST GLACIAL-INTERGLACIAL CYCLE	179
7.1. Experimental setup	179
7.2. Results	180
7.2.1. Ice sheet evolution	180
7.2.2. The Antarctic ice sheet during the Last Interglacial	185
7.2.3. Present-day imbalance of ice thickness and bed elevation	187
7.2.4. Impact of sea level forcing	189
7.3. Comparison with field observations	190
7.3.1. Geomorphological tests	190
7.3.2. Glaciological tests	193
7.4. Summary	194
8. RESPONSE TO FUTURE GREENHOUSE WARMING	196
8.1. Experimental setup	196
8.2. The enhanced greenhouse warming effect	198
8.3. Modelling the surface mass balance	203
8.3.1. Accumulation	204
8.3.2. Runoff	204
8.3.3. Sensitivity of the surface mass balance	208
8.4. Response of the ice sheet	211
8.4.1. Static response	211
8.4.2. Dynamic response	213
8.4.3. Effect of melting beneath ice shelves	215
8.5. Summary	216
9. CONCLUSION	218
REFERENCES	223
