Contents

Preface	XV
CHAPTER 1 (R. Anton)	
STRUCTURAL CHARACTERIZATION	1
1. Introduction	1
2. Production of thin films	2
3. Structural characterization by electron microscopy and diffraction	5
3.1 Specimen preparation	5
3.2 Contrast and resolution	5
3.3 Detection of grain sizes in polycrystalline films	7
3.4 Detection of texture and epitaxial order	7
3.5 Quantitative image analysis of micrographs	10
4. In-situ TEM techniques	11
4.1 Substrate preparation	12
4.2 In-situ growth studies	12
4.3 Chemisorption and reaction studies	17
4.3.1 Influence of residual gases on film growth	17
4.3.2 Interaction of oxygen with metal and alloy films	20
4.3.2.1 Pd/O ₂	20
4.3.2.2 Fe/Al ₂ O ₃ /O ₂	21
4.3.2.3 Cu-Au/Al ₂ O ₃ /O ₂	22
5. Influence of nucleation and growth processes on film structure ...	25
5.1 General aspects of film growth	25
5.2 Atomistic description of nucleation	26
5.2.1 Nucleation of single components and of alloys	26
5.2.2 The composition of alloys during nucleation	29
5.2.3 Condensation coefficients	31
5.2.4 Nucleation at defect sites	32
5.3 Growth of particles	33
5.4 Coalescence by growth and mobility	37
5.5 Particle habits	39
5.6 Epitaxial orientation on single crystal substrates	40
5.7 Graphoepitaxy on amorphous substrates with surface topography	43

VIII

6. Application of surface analytical techniques to thin films	45
6.1 Particle and film growth studies by AES	45
6.2 Information from photoelectron spectroscopy	47
7. Conclusion	49
References	50

CHAPTER 2 (D. Dayal, H.-U. Finzel and P. Wißmann)

RESISTIVITY MEASUREMENTS ON PURE AND GAS COVERED SILVER FILMS	53
1. Introduction	53
2. Experimental	54
3. The electrical resistivity of pure silver films	63
3.1 Smooth films	64
3.2 Rough films	66
3.3 Discontinuous films	69
3.4 Experimental results	75
4. Influence of oxygen adsorption	81
4.1 Smooth films	81
4.2 Rough films	83
4.3 Experimental results	85
5. Selected topics	87
5.1 The electron density	87
5.2 Influence of annealing temperature	89
5.3 The absolute temperature coefficient of resistivity	92
5.4 The film/substrate transition	94
5.5 Metal/metal systems	94
5.6 Porous film structures	95
5.7 Partially oxidized films	97
5.8 Adsorption of other gases and reactions with oxygen	97
5.9 Roughness factor considerations	99
6. Other metal/gas systems	100
7. Conclusions and further prospects	102
8. Acknowledgements	102
References	103

CHAPTER 3 (R.E. Hummel)

APPLICATION AND DETERIORATION OF THIN FILMS USED FOR MICROELECTRONIC DEVICES	111
1. Thin films and interfaces	111
2. Failure mechanisms in thin film metallizations	114
2.1 Electrotransport	114
2.2 Thermal grooving of the grain boundaries	120
2.3 Thermotransport	124
2.4 Extrusions	126
2.5 Corrosion	129
3. Conclusion	131
References	132

CHAPTER 4 (H. Schade)

EFFECTS OF ELECTRON AND PHOTON IRRADIATION ON THE ADSORPTION AND ADHESION OF THIN FILMS	134
1. Introduction	134
2. Electronic excitations	135
3. Irradiation-induced enhancement of adsorption	136
3.1 Adsorption enhancement on metal surfaces	138
3.1.1 Influence of electron irradiation on the oxidation of nickel	138
3.1.2 Influence of electron irradiation on the adsorption of CO and CO ₂ on nickel	139
3.1.3 Electron beam effects on the adsorption of acetylene on tungsten	141
3.1.4 Electron beam effects on the interaction with ammonia on ruthenium (0001)	141
3.2 Adsorption enhancement on semiconductor surfaces	143
3.2.1 Dependence on the energy gap	143
3.2.2 Oxygen on silicon	146
3.2.2.1 Oxygen exposure during irradiation	146
3.2.2.2 Oxygen exposure following irradiation	149
4. Irradiation-induced enhancement of adhesion	153
5. Concluding remarks	156
References	157

X

CHAPTER 5 (A. Goldmann)

PHOTOELECTRON SPECTROSCOPY	160
1. Introduction	160
2. The methods	161
2.1 Principles of photoemission and inverse photoemission	161
2.2 Experimental aspects	164
3. Selected experimental results	166
3.1 Clean surfaces	166
3.1.1 From atoms to energy bands	166
3.1.2 Surface versus bulk effects	168
3.1.3 Alloy systems	173
3.2 Adsorption studies	175
3.2.1 Oxidation of nickel, an IPES investigation	175
3.2.2 Adsorption on smooth and porous Ag films	178
3.2.3 Halogen-induced corrosion processes	186
4. Summary and outlook	193
References	193

CHAPTER 6 (J. Heidberg and H. Weiß)

VIBRATIONAL SPECTROSCOPY OF ADSORBATES ON THIN METAL FILMS	196
1. Introduction	196
2. Overview of techniques in vibrational surface spectroscopy	197
3. Vibrational modes of adsorbates. Selection rules	203
3.1 Isolated adsorbed molecules	203
3.2 Metal particle size effect	207
3.3 Dynamic vibrational coupling in adsorbates	208
3.1.1 Dynamic vibrational coupling in adsorbates in metal films	209
4. Vibrational frequencies of adsorbates	211
4.1 Frequency shifts of isolated adsorbates	211
4.1.1 Mechanical renormalization	211
4.1.2 Self-image shift	213
4.2 Characteristic adsorbate frequencies	214
4.3 Coupled vibrations of adsorbates	216
4.3.1 Dipolar Coupling	217
4.3.1.1 Isotopically pure adsorbates	217
4.3.1.2 Isotopically mixed adsorbates.....	219

5. Intensities	222
6. Line shapes and dynamics	224
7. Experimental aspects	226
8. Specific film effects	229
References (sections 1-8)	233
Tabulation of investigated systems	237

CHAPTER 7 (K. Wandelt)

THE LOCAL WORK FUNCTION OF THIN METAL FILMS:

DEFINITION AND MEASUREMENT	280
1. Introduction	280
2. Work function of metals	289
2.1 General definition	289
2.2 Infinite jellium surface	290
2.3 Finite uniform surface	294
2.4 Face specificity	295
2.5 Smoluchowski electron smoothing effect	297
2.6 The local surface potential	300
2.7 Image potential	301
2.8 The local work function	302
3. Photoelectron spectroscopy of adsorbed xenon (PAX)	303
3.1 The photoemission spectrum of adsorbed Xe	304
3.2 The theory of PAX	308
3.3 PAX as a local work function probe	312
3.3.1 PAX from heterogeneous surfaces	312
3.3.2 Methodical aspects	315
4. Case studies	324
4.1 Structural surface defects: Steps	324
4.2 Adsorbed alkali atoms	331
4.3 Submonolayer epitaxy of silver on Ru (001)	337
4.4 Structure of coldly deposited Ag films	342
4.5 Mechanism of two-dimensional AgAu alloy formation on Ru(001)	347
5. Concluding remarks	354
5.1 Summary and outlook	354
5.2 Comparison between PAX and STM (scanning tunneling microscopy)	356
5.2.1 Scanning tunneling microscopy	356
5.2.2 STM and PAX as complementary techniques	359
References	363

XII

CHAPTER 8 (M. Watanabe)

OPTICAL ANALYSIS OF ADSORBED GASES ON METALS AND METAL FILMS	369
1. Introduction	369
2. Non-classical reflectance of p- and s-polarized light	371
2.1 Analytical expressions of the non-classical corrections	376
2.2 Relation between the ellipsometric response and the electrical resistance of thin films	379
3. Effects of gas adsorption on ellipsometric parameters	388
3.1 Polarizability and dielectric function of adsorbates on metals	393
3.2 Experimental results	398
4. Coverage dependence of the ellipsometric parameters	410
4.1 Experimental results	416
5. Surface enhanced Raman scattering and polarizability of adsorbates	424
6. Closing remarks	428
References	430

CHAPTER 9 (G. Wedler)

ADSORPTION AND REACTIONS ON THIN METAL FILMS	433
1. Introduction	433
2. Adsorption and reaction calorimetry	434
2.1 Introduction	434
2.2 Experimental	434
2.2.1 The equipment	434
2.2.2 The calibration of the calorimeter	436
2.2.3 Phenomenological description of experimental results	439
2.2.4 Quantitative description of experimental results	443
2.3 Examples	447
2.3.1 The system Fe film/ O_2	447
2.3.2 The system Fe film / CO_2	448
2.3.3 The system Fe film/ $H_2 + CO$	451
3. Adsorption and absorption of hydrogen by palladium films	454
3.1 Introduction	454
3.2 Experimental	454
3.3 Results	456
3.3.1 Measurements at 273K	456
3.3.2 Measurements at 77K	460
3.4 Discussion	464

4. The Boudouard reaction on iron films	467
4.1 Introduction	467
4.2 Experimental	467
4.3 Results and discussion	468
References	473
CHAPTER 10 (B.E. Nieuwenhuys)	
ADSORPTION AND CATALYSIS ON ALLOY SURFACES	476
1. Introduction	476
2. Surface composition and structure	479
3. Electronic structure of alloys	484
4. Catalysis by supported bimetallic systems	485
5. Adsorption properties of well defined bimetallic surfaces	487
5.1 Ru-Cu and Ru-Au surfaces	489
5.2 Ni-Cu and Ni-Au surfaces	497
5.3 Pd-Cu, Pd-Ag and Pd-Au surfaces	500
5.4 Pt-Cu and Pt-Au surfaces	510
5.5 Pt-Rh and Pt-Ni surfaces	517
5.6 Pt-Pb, Pt-Sn, Pt-Re and Pt-Ti surfaces	521
6. Concluding remarks	522
References	526
INDEX	531
