CONTENTS

Preface ........................................................................................................................... IX
Acknowledgment ........................................................................................................... X

OXIDATION

Redox dynamics and structure/activity relationships of vanadium-oxide on TiO₂ catalyst
G. Centi, M. Lopez Granados, D. Pinelli and F. Trifiro........... 1

Molecular structure-reactivity relationships of supported vanadium oxide catalysts
G. Deo and I.E. Wachs................................................................. 13

Relative influence of structure and reactivity of V- and Mo-containing catalysts in mild oxidation of hydrocarbons
E. Bordes................................................................. 21

Key structure-activity relationships in the vanadium phosphorus oxide catalyst system
J.R. Ebner and M.R. Thompson........................................... 31

Structure-activity relationships in the oxidation of alkylaromatics over metal oxides
A. Andersson, S. Hansen and M. Sanati............................ 43

Catalyst oxide support oxide interaction to prepare multifunctional oxidation catalysts
Y. Moro-oka, D.-H. He and W. Ueda................................. 57

Structural-sensitivity in propylene mild oxidation on new [100] oriented MoO₃ catalysts
M. Abon, B. Mingot, J. Massardier and J.C. Volta............. 67

A comparison between low and high temperature Bi₂O₃·MoO₃ phases for 1-butene reactions
M.F. Portela, C. Pinheiro, C. Dias and M.J. Pires.............. 77

Surface- and bulk-type catalysis of heteropolyoxymolybdates. Importance of the concept in the structure-activity relationships for catalyst design
M. Misono, N. Mizuno, H. Mori, K.Y. Lee, J. Jiao and T. Okuhara.................................................. 87

Active iron oxo centers for the selective catalytic oxidation of alkanes
J.E. Lyons, P.E. Ellis, Jr. and V.A. Durante..................... 99

The oxidative coupling of methane over Sm₂O₃ and La₂O₃
S.J. Korf, J.G. van Ommen and J.R.H. Ross..................... 117
Effects of metal particle size and carbon fouling on the rate of heptane oxidation over platinum
R.F. Hicks, R.G. Lee, W.J. Han and A.B. Kooh.................127

Structure/function relations in transition metal sulfide catalysts
R.R. Chainelli and M. Daage..............................137

HYDROGENATION

Enantioselective hydrogenation of ethyl pyruvate: effect of catalyst and modifier structure
H.U. Blaser, H.P. Jalett, D.M. Monti, A. Baiker and J.T. Wehrli.................................147

Non-stoichiometry, a key to modify the activity and selectivity of spinel-type catalysts for hydrogenation reactions
F. Trifiro and A. Vaccari.................................157

Supported metal catalysts prepared from amorphous metal alloys
A. Baiker, J. De Pietro, M. Maciejewski and B. Walz.........169

ZEOLITE CATALYSIS

Structure sensitivity in zeolite catalysts
F.G. Dwyer..................................................179

Conformational effects in heterogeneous catalysis
D. Fărcașiu..................................................193

Effects of morphology and electronic structure on the catalysis of zeolite encaged palladium particles
Z. Karpiński, S.T. Homeyer and W.M.H. Sachtler...........203

Fundamental characteristics of the catalyst system platinum-loaded zeolite L
J.M. Newsam, B.G. Silbernagel, A.R. Garcia, M.T. Melchior and S.C. Fung...........................211

Cation induced changes in chemical reactivity of small metal particles
A.P.J. Jansen and R.A. van Santen..........................221

Structure-reactivity relationships in methanol to olefin conversion on various microporous crystalline catalysts
T. Inui.....................................................233

Titanium silicalite: a new selective oxidation catalyst
B. Notari.....................................................243

Potential of zeolites as catalysts in organic synthesis
W.F. Hoelderich...........................................257
SURFACE SCIENCE AND MODELING

The influence of surface defect sites on chemisorption and catalysis
J.T. Yates, Jr., A. Szabó and M.A. Henderson.........................273

Correlations between structure and reactivity of metal surfaces
X. Jiang and D.W. Goodman..................................................291

Alkyl iodides on copper surfaces: C-H activation and coupling reactions of hydrocarbon fragments to produce ethylene
C.J. Jenks, J.-L. Lin, C.-M. Chiang, L. Kang, P.S. Leang,
T.H. Wentzlaff and B.E. Bent..............................................301

Effects of halogens on oxidation reactions over single crystals of palladium
K. Klier, G.W. Simmons, Y.-N. Wang and J.A. Marcos.............309

Small molecule reactions on clean and modified iron surfaces

Structure-activity and structure-selectivity relations for reactions of carboxylic acids on TiO₂ (001) surfaces
H. Idriss, K.S. Kim and M.A. Barteau.................................327

Surface chemistry modelling of Ziegler-Natta catalysis
P.R. Watson, J. Mischenko III and S.M. Mokler.....................337

Mathematical description of heterogeneous materials -effect of the branching direction
J.W. Beeckman.................................................................347

Author Index.................................................................359

Studies in Surface Science and Catalysis (other volumes in the series)..................................................361
