29. MÄRZ 2017

von

Dr. rer. nat. Ronny Nawrodt

GEBOREN AM 09. JUNI 1978 IN GERA

Contents

1	Introduction	3
2	Thermal noise in modern interferometric gravitational wave detectors	13
2.1	Thermal noise driven by thermal energy	13
2.2	Thermal noise driven by temperature fluctuations	14
2.3	Challenges in thermal noise for 3rd generation of gravitational wave detectors	16
3	Mechanical loss of optical materials	47
3.1	Silicon as a construction material for future detectors	51
3.1.1	High mechanical Q-factor measurements on silicon bulk samples	52
3.1.2	Investigation of mechanical losses of thin silicon flexures at low temperatures	59
3.2	Effect of heat treatment on mechanical dissipation in tantalum pentoxide coatings	72
4	Indium joints for cryogenic gravitational wave detectors	87
5	Optical properties of materials of future detectors	107
5.1	Thermo-optic coefficient of silicon at 1550 nm and cryogenic temperatures	107
5.2	Optical absorption of bulk silicon at cryogenic temperature	112
6	Reduction of coating thermal noise	129
6.1	Reduction of coating thermal noise by using an etalon	129
6.2	Calculation of thermal noise in grating reflectors	142
6.3	The mechanical loss of prototype GaP/AlGaP crystalline coatings . . .	160
