Contents

<i>Preface</i>	v
1. Introduction	1
1.1 Historical developments	1
1.2 Semiconductor materials	3
1.3 Semiconductor device operating principles	7
1.4 Optical fibers	10
1.5 Operating principles of fiber amplifiers	11
1.6 Applications	14
1.7 Book overview	16
1.8 Future challenges	21
References	22
2. Light Emitting Diode (LED) and Materials	25
2.1 Introduction	25
2.2 Materials and fabrication	26
2.3 Operating principles of LEDs	39
2.4 LEDs for infrared wavelengths	44
2.5 LEDs for visible wavelengths	49
2.6 Solid state lighting	51
References	59

3. Semiconductor Laser — I	65
3.1 Introduction	65
3.2 Optical waveguide	70
3.3 Laser designs and emission characteristics	72
3.4 Recombination mechanisms and optical gain	76
3.5 Rate equations and dynamic characteristics	90
3.6 Multiquantum well lasers	94
3.7 Single frequency and tunable lasers	115
3.8 Laser reliability	120
References	123
4. Semiconductor Laser — II	127
4.1 Introduction	127
4.2 Vertical cavity surface-emitting lasers	127
4.3 Quantum cascade laser	134
4.4 Lasers for visible wavelengths	139
4.5 Quantum dot and nanostructure lasers	142
4.6 High power semiconductor lasers	152
4.7 Mode-locked semiconductor lasers	162
References	168
5. Modulators	173
5.1 Introduction	173
5.2 Semiconductor waveguide modulator	175
5.3 Semiconductor surface-normal modulator	189
5.4 LiNbO ₃ Mach-Zehnder modulator	193
5.5 Advanced modulation formats	201
References	210
6. Photodetectors	215
6.1 Introduction	215
6.2 PIN photodiode	216
6.3 Avalanche photodiode	227

6.4	Solar cells	233
	References	240
7.	Semiconductor Optical Amplifier	243
7.1	Introduction	243
7.2	Optical gain	244
7.3	CW amplifier characteristics	250
7.4	Amplifier rate equations for pulse propagation	257
7.5	Pulse amplification results	261
7.6	Amplifier noise	266
7.7	Mach–Zehnder interferometer using SOA	268
7.8	Gain dynamics in SOA	270
7.9	Quantum dot-SOA	275
7.10	Broadband SOA source	281
	References	284
8.	Photonic Integrated Circuits	289
8.1	Introduction	289
8.2	Selective area growth	290
8.3	Integrated laser and amplifier	294
8.4	Transmitter photonic integrated circuit (PIC)	299
8.5	Photoreceiver PIC	301
8.6	Transmitters and receiver PICs for WDM systems	304
8.7	Optoelectronic integrated circuit (OEIC)	307
	References	310
9.	Optical Fiber and Fiber-Based Devices	313
9.1	Introduction	313
9.2	Fiber for optical transmission	316
9.3	Fiber amplifiers	321
9.4	Fiber Bragg gratings	326

9.5	CW fiber lasers	330
9.6	Mode-locked fiber lasers	333
9.7	Fiber Raman lasers and amplifiers	340
9.8	Photonic crystal fiber	348
9.9	Fiber sensors	349
	References	353
10.	Planar Waveguide Amplifiers and Lasers	357
10.1	Introduction	357
10.2	Er-doped planar waveguide	360
10.3	Nd-doped planar waveguide	363
10.4	Er-Yb Co-doped planar waveguide	367
10.5	Yb-doped planar waveguide	369
10.6	High power planar waveguide lasers	371
	References	375
11.	Optical Transmission System Application	379
11.1	Introduction	379
11.2	Noise and bit-error-rate (BER)	380
11.3	Long-distance transmission	383
11.4	Coherent transmission	389
11.5	Subscriber transmission	392
11.6	Soliton transmission	395
11.7	Optical transmission using Raman amplifiers	397
11.8	Optical network using (SOAs)	399
11.9	Advanced modulation formats	411
	References	425
Appendix 1.	Waveguide Modes in Planar Waveguide	431
Appendix 2.	Waveguide Mode in Optical Fibers	443
Appendix 3.	Optical Pulse Propagation Equation	449

Appendix 4.	Three-Level and Four-Level Laser Equations	457
Appendix 5.	Spontaneous Emission and Absorption for Parabolic Bands	467
Appendix 6.	Quantum Cascade Laser — Gain Calculation	479
Appendix 7.	Supercontinuum Generation in Optical Fibers	487
Appendix 8.	Supercontinuum Generation in Planar Waveguides	499
Appendix 9.	Theory of Harmonic and Rational Harmonic Mode-Locking	507
Appendix 10.	Reflectivity of Periodic Structure	513
Appendix 11.	Semiconductor Laser Rate Equations	523
Appendix 12.	Nonlinear Effects in Fibers	527
Appendix 13.	Nonlinear Effects in Semiconductor Optical Amplifier	541
Appendix 14.	Energy Levels in Quantum Well	551
Appendix 15.	Problems	557
<i>Index</i>		565
