

# **Application of the Adjoint Modal Formalism for the Design of Nanooptical Structures**

**Dissertation**  
**zur Erlangung des akademischen Grades**  
**doctor rerum naturalium (Dr. rer. nat.)**

**vorgelegt dem Rat der Physikalisch-Astronomischen Fakultät  
der Friedrich-Schiller-Universität zu Jena**

**von Diplom-Physiker Thomas Kaiser**  
**geboren am 13.09.1983 in Rodewisch**

# Contents

<b>I. Introduction</b>	<b>5</b>
<b>II. Theoretical and computational concepts</b>	<b>13</b>
2.1. Electromagnetic wave propagation as mathematical eigenvalue problem . . . . .	13
2.2. Numerical Computations: Aperiodic Fourier Modal Method . . . . .	33
<b>III. Generalization of the impedance using the adjoint eigenmode framework</b>	<b>39</b>
3.1. Generalized impedance definition from the adjoint mode framework . . . . .	39
3.2. Application of the adjoint impedance model to different structures . . . . .	48
<b>IV. Modally enhanced optical nanoantennas</b>	<b>61</b>
4.1. Increase of feedback by modal tuning . . . . .	61
4.2. Experimental demonstration using SNOM and n-PEEM . . . . .	68
<b>V. Hybrid waveguide-nanoparticle systems</b>	<b>85</b>
5.1. Basic configuration: Waveguide to Plasmon mode coupling . . . . .	85
5.2. Lattice configuration: Waveguide-Plasmon-Polariton . . . . .	90
<b>VI. Summary and Outlook</b>	<b>99</b>
<b>A. Appendix</b>	<b>104</b>
A1. Derivation of the modified Gauss' theorem for electromagnetic modes. . . . .	104
A2. Adjoint impedance ratio of a SPP-grating interface . . . . .	105
A3. Summary of adjoint modal generalizations of important quantities . . . . .	107
