Methods for Spin-1/2 Nuclei

Chapter 1	Heteronuclear Correlation Solid-state NMR Spectroscopy with Indirect Detection under Fast Magic-angle Spinning	3
	<i>Takeshi Kobayashi, Yusuke Nishiyama and Marek Pruski</i>	
1.1	Introduction	3
1.2	Basic Aspects of Fast MAS	4
1.2.1	Sensitivity	5
1.2.2	^1H Resolution: Indirect Detection of Lower- γ Nuclei	5
1.2.3	Flexibility in Using High and Low RF Magnetic Fields	9
1.3	Hardware Handling	11
1.3.1	Gas Lines	11
1.3.2	Probes	12
1.3.3	MAS Rotors	13
1.3.4	Magic-angle Adjustment	15
1.3.5	Frictional Heating	16
1.3.6	Control of t_1 -Noise	17
1.4	Optimization of ^1H -Detected 2D HETCOR Experiments	17
1.4.1	Heteronuclear Dipolar Recoupling by CP and SR4_1^2 (HSQC, D-HMQC)	22
1.4.2	^1H - ^1H Recoupling (HSQC)	24

1.4.3	^1H - ^1H Homonuclear Decoupling (CP/ <i>J</i> -INEPT and <i>J</i> -HMQC)	25
1.4.4	Excitation and Reconversion Pulse on X Nuclei (HMQC)	28
1.4.5	<i>J</i> -transfers (CP/ <i>J</i> -INEPT and <i>J</i> -HMQC)	29
1.4.6	Heteronuclear Decoupling (All Experiments)	30
1.4.7	2D Experiments	31
1.5	Conclusion	32
	Acknowledgements	33
	References	33
Chapter 2	High-resolution ^1H 2D Magic-angle Spinning Techniques for Organic Solids	39
	<i>Steven P. Brown</i>	
2.1	Introduction	39
2.2	Underlying Concepts	40
2.2.1	^1H and ^{13}C MAS NMR Linewidths	40
2.2.2	^1H Homonuclear Decoupling	42
2.2.3	Recoupling of Dipolar Couplings Under MAS	43
2.2.4	Using ^1H Spin Diffusion Under MAS: The NOESY Pulse Sequence	48
2.2.5	Spin-echo Coherence Lifetimes	48
2.2.6	Set-up: ^1H - ^{13}C CP MAS NMR of <i>L</i> -Alanine	49
2.3	Methods and Applications	50
2.3.1	One-dimensional ^1H One-pulse Fast MAS NMR	50
2.3.2	^1H DQ and Spin-diffusion (NOESY) NMR Spectroscopy Under Fast MAS	53
2.3.3	^1H - ^{13}C and ^{14}N - ^1H Heteronuclear Correlation Under Fast MAS	54
2.3.4	^1H DQ CRAMPS NMR Spectroscopy	58
2.3.5	^1H - ^{13}C Heteronuclear Correlation NMR Spectroscopy Using Moderate MAS and ^1H Homonuclear Decoupling	63
2.3.6	NMR Crystallography Combining ^1H MAS NMR Techniques, GIPAW Calculation of NMR Parameters and Complementary Experimental Methods	66
2.4	Concluding Remarks	71
	Acknowledgements	72
	References	72

Chapter 3	Isotropic vs. Anisotropic Chemical Shift Separation	75
	<i>Ivan Hung and Zhehong Gan</i>	
3.1	Introduction	75
3.2	Theory	76
3.2.1	MAT and PASS	76
3.2.2	CSA Amplification	80
3.3	MAT and PASS Hybrid	82
3.4	MATPASS of Quadrupolar Nuclei	86
3.5	CSA Amplification of Uniformly Labeled Systems	89
3.6	Practical Aspects of MATPASS and xCSA	92
	References	94
	Methods for Quadrupolar Nuclei	
Chapter 4	Two-dimensional Methods for Half-integer Quadrupolar Nuclei	99
	<i>F. Pourpoint, O. Lafon, R. Gauvin, J.-P. Amoureux and L. Delevoye</i>	
4.1	Quadrupolar Nuclei	99
4.2	High-resolution Methods	101
4.2.1	MQMAS	101
4.2.2	Satellite-transition MAS	110
4.3	Homonuclear Correlations	113
4.3.1	Double-quantum–Single-quantum Homonuclear Correlations	113
4.3.2	¹¹ B Homonuclear Correlation to Investigate the Structure of Pyrex Glass	116
4.3.3	²⁷ Al DQ–SQ and Dynamic Nuclear Polarization to Characterize the Surface of Meso-alumina	116
4.4	Heteronuclear Correlations	118
4.4.1	Through-bond Correlations	118
4.4.2	Through-space Correlations	123
4.5	More Advanced Techniques	126
4.6	Conclusion	130
	References	130
Chapter 5	¹⁴N Solid-state NMR	134
	<i>Luke A. O'Dell</i>	
5.1	Introduction	134
5.2	Ultra-wideline Methods	136

5.3	Magic-angle Spinning	142
5.4	Overtone Spectroscopy	145
5.5	Indirect Detection	150
5.6	Dynamic Nuclear Polarisation	153
5.7	Summary	156
	References	158

Characterisation of Dynamics

Chapter 6	CODEX-based Methods for Studying Slow Dynamics	163
	<i>Detlef Reichert and Alexey Krushelnitsky</i>	
6.1	Introduction	163
6.2	Theory	165
6.3	Experimental Aspects	172
6.3.1	Choice of Length of Recoupling Period	172
6.3.2	Rotor Synchronization	175
6.3.3	Correction for Losses Due to Relaxation	176
6.3.4	Spin Diffusion	177
6.3.5	Relaxation-induced Dipolar Exchange with Recoupling (RIDER)	179
6.3.6	Effects of Finite Pulse Lengths and Pulse Miss-set	181
6.4	Examples	182
6.4.1	Helical Jumps in Semi-crystalline Polymers	182
6.4.2	Local Motions in Solid Proteins	187
6.5	Conclusions	189
	Acknowledgements	190
	References	190
Chapter 7	NMR Studies of Ionic Dynamics in Solids	193
	<i>Roland Böhmer, Michael Storek and Michael Vogel</i>	
7.1	Introduction	193
7.2	General Aspects	195
7.3	Fast Dynamics	197
7.3.1	Spin-lattice Relaxation and Field Cycling	198
7.3.2	Diffusometry Using Magnetic Field Gradients	202
7.4	Intermediate Dynamics	203
7.4.1	Spin-lattice Relaxation in the Rotating Frame	204
7.4.2	One-dimensional Spin-echo Spectra	207

<i>Contents</i>		xiii
7.5	Slow Dynamics	212
7.5.1	Sequences, Cycles and Signals	212
7.5.2	Selectively Suppressed or Inverted One-dimensional Spectra	215
7.5.3	Sine- and Cosine-modulated Stimulated- echo Functions	217
7.5.4	Two-dimensional Exchange Spectroscopy	220
7.6	Conclusions	225
	Acknowledgements	225
	References	225
NMR at the Extremes		
Chapter 8	Low-temperature NMR: Techniques and Applications	233
	<i>D. Arčon, I. Heinmaa and R. Stern</i>	
8.1	Introduction	233
8.2	Low-temperature Experimental Techniques and Designs	234
8.2.1	Cryogenics for Low-temperature NMR	234
8.2.2	Low-temperature NMR Probes	236
8.2.3	Low-temperature MAS NMR Probes	238
8.3	Selected Examples of Low-temperature NMR Studies	240
8.3.1	Spin Hamiltonian and Dynamics in Fullerides	241
8.3.2	Probing Novel Quantum Spin States	245
8.4	Conclusion	255
	Acknowledgements	256
	References	256
Chapter 9	NMR at High Temperature	262
	<i>Jonathan F. Stebbins</i>	
9.1	Introduction	262
9.1.1	Overview	262
9.1.2	Spectroscopy at High Temperature: Motivations and General Constraints	263
9.2	Probe Design Considerations	264
9.2.1	Issues of Signal Intensity	265
9.2.2	Sample Containers and Heating Methods	265
9.3	Examples of Applications	268
9.3.1	Crystalline Solids: Effects of Temperature on Chemical Shifts	268
9.3.2	Structural Phase Transitions in Solids	269

9.3.3	Ionic Mobility in Solids	271
9.3.4	High-temperature Liquids: Chemical Shifts and Average Structure	274
9.3.5	Relaxation Times and Dynamics in High-temperature Inorganic Liquids	280
9.3.6	Glass-forming Oxide Liquids: Direct Observations of Species Exchange	281
9.4	Prognosis	284
	Acknowledgements	285
	References	285

Methods for Complex Systems

Chapter 10	Isotopically Enriched Systems	291
	<i>C. Beumer, A. König, D. Schölzel, B. Uluca, F. Weirich and H. Heise</i>	
10.1	Introduction	291
10.2	Isotope Labelling Techniques for Biomolecules	292
10.3	Dipolar Recoupling Techniques for Multidimensional NMR Spectroscopy	299
10.3.1	Zeroth-order Homonuclear Dipolar Recoupling	300
10.3.2	Second-order Homonuclear Dipolar Recoupling	303
10.3.3	Heteronuclear Dipolar Recoupling	310
10.4	Signal Enhancement by DNP	315
10.5	Conclusion	318
	References	318
Chapter 11	NMR Studies of Electrochemical Storage Materials	322
	<i>Pieter C. M. M. Magusin, Ieuan D. Seymour, Oliver Pecher and Clare P. Grey</i>	
11.1	Introduction	322
11.1.1	General Working Principles of Batteries	323
11.1.2	Anodes	324
11.1.3	Cathodes	325
11.1.4	Electrolyte	326
11.1.5	Beyond Li-ion Technologies?	327
11.1.6	NMR on Energy Storage Materials	327

11.2	Methods	328
11.2.1	Paramagnetic NMR	328
11.2.2	Calculation of pNMR Parameters	332
11.2.3	<i>In Situ</i> Solid-state NMR	337
11.3	Case Studies	340
11.3.1	Real-time NMR Investigations of Structural Changes in Si Electrodes for LIBs	340
11.3.2	Mechanistic Insights into Sodium Storage in Hard Carbon from <i>In Situ</i> ^{23}Na NMR	342
11.3.3	<i>In Situ</i> ^{23}Na NMR Monitoring of Metallic Microstructure Formation in NIBs	344
11.3.4	TM-substituted LiFePO_4 : ^{31}P MAS NMR of Multiple TM Disorder Combined with DFT Bond Pathway Decomposition	345
11.3.5	Paramagnetic Cathode Materials Studied by ^{17}O , ^{27}Al and ^{25}Mg NMR and DFT	346
11.4	Conclusions and Outlook	349
	Acknowledgements	350
	References	350
Chapter 12	Disordered Solids	356
	<i>P. Florian and F. Fayon</i>	
12.1	What Is Disorder?	356
12.2	Effect of Disorder on the NMR Line Shapes	358
12.2.1	Spin-1/2 Nuclei	358
12.2.2	Half-integer Spins: The Czjzek Model	362
12.3	Specific Acquisition Strategies	366
12.3.1	Use of Hahn Echoes	366
12.3.2	DOR, DAS and MQMAS	371
12.4	Correlation Experiments	372
12.4.1	Homonuclear Correlations	373
12.4.2	Heteronuclear Correlations	378
12.5	Relating NMR Parameters to Local Structure	381
12.5.1	Semi-empirical Correlation	381
12.5.2	The Molecular Dynamics/Gauge-including Projector Augmented-wave (GIPAW) Approach	382
12.6	Conclusion	384
	References	385

Chapter 13 Characterization of Liquid-crystalline Materials by Separated Local Field Methods	391
<i>S. V. Dvinskikh</i>	
13.1 Introduction	391
13.2 Anisotropic Averaging of Spin Interactions	393
13.2.1 Heteronuclear Coupling	393
13.2.2 Chemical Shifts	394
13.2.3 Quadrupole Coupling	394
13.3 Experimental Techniques	395
13.3.1 General Experimental Aspects	395
13.3.2 Heteronuclear Decoupling	396
13.3.3 Signal Enhancement of Low- γ Nuclei	398
13.3.4 Heteronuclear Dipolar NMR Spectroscopy	398
13.4 SLF NMR in Liquid Crystals	408
13.4.1 Columnar Mesophases	410
13.4.2 Twist-bend Nematic Phase	413
13.4.3 Liquid-crystalline Donor-Acceptor Dyads	414
13.4.4 Lipids	414
13.4.5 Hybrid Organic-Inorganic Nanocomposites	417
13.5 Conclusions	419
Acknowledgements	420
References	420
Subject Index	424
